

# Is Pe-ru-na Useful for Catarrh?

Should a list of the ingredients of Pe-ru-na be submitted to any medical expert, of whatever school or nationality, he would be obliged to admit without reserve that each one of them was of undoubted value in chronic catarrhal diseases, and had stood the test of many years' experience in the treatment of such diseases. **THERE CAN BE NO DISPUTE ABOUT THIS WHAT-EVER.** Pe-ru-na is composed of the most efficacious and universally used herbal remedies for catarrh. Every ingredient of Pe-ru-na has a reputation of its own in the cure of some phase of catarrh.

Pe-ru-na brings to the home the **COMBINED KNOWLEDGE OF SEVERAL SCHOOLS OF MEDICINE** in the treatment of catarrhal diseases; brings to the home the scientific skill and knowledge of the modern pharmacist; and last but not least, brings to the home the vast and varied experiences of Dr. Hartman, in the use of catarrh remedies, and in the treatment of catarrhal diseases.

The fact is, chronic catarrh is a disease which is very prevalent. Many thousand people know they have chronic catarrh. They have visited doctors over and over again, and been told that their case is one of chronic catarrh. It may be of the nose, throat, lungs, stomach or some other internal organ. There is no doubt as to the nature of the disease. The only trouble is the remedy. This doctor has tried to cure them. That doctor has tried to prescribe for them.

**BUT THEY ALL FAILED TO BRING ANY RELIEF.**

Dr. Hartman's idea is that a catarrh remedy can be made on a large scale, as he is making it; that it can be made honestly, of the purest drugs and of the strictest uniformity. His idea is that this remedy can be supplied directly to the people, and no more be charged for it than is necessary for the handling of it.

No other household remedy so universally advertised carries upon the label the principal active constituents, showing that Pe-ru-na invites the full inspection of the critic.

## Electric Polisher.

The increasing demand for high-grade floor polishing has resulted in the introduction of an electric machine which is very efficient for use on large surfaces of tile, mosaic and other floors of similar construction. A six-wheel electric floor surface, all of the driving parts of which are completely closed and protected from grit and water, is now manufactured.

**FITS, St. Vitus' Dance; Nervous Diseases** permanently cured by Dr. Kline's Great Nerve Restorer. \$2 trial bottle and treatise free. Dr. H. R. Kline, Ltd., 681 Arch St., Phila., Pa.

## Stork Was Faithful Till Death.

The devotion of the stork to its young has been strikingly shown during a fire at Basel. The nest was set on fire by a spark from a chimney, but the mother bird refused to leave the fledglings and all were burned to death.

## Poor Rich is Expensive

If one is rich enough to repaint his buildings every year for the pleasure of having a change of color scheme, the quality of the paint used may cut little figure. But if it is desirable to cut the painting bills down to the least amount possible per year, it is of the utmost importance that the paint be made of Pure White Lead and the best of Linseed Oil. There are imitations in the form of alleged White Lead, and there are substitutes in the form of ready-prepared paints.

We guarantee our White Lead to be absolutely pure, and the Dutch Boy on the side of every keg is your safeguard. Look for him.

# The Farm

## Corn Superior to Oats.

Corn is very superior to oats as a poultry feed. Experiments show that when corn is fed there is an increase in body weight, and when oats are fed there is a tendency in the opposite direction.

## Early Maturity.

Early maturity is achieved by generous feeding of progeny descended from early maturing ancestors. Young animals intended for the shambles should be made to gain continuously if the most profits are to be realized. — Farmers' Home Journal.

## Best For Market Purposes.

The best types of poultry for market purposes are those which have a plump body, light colored plumage, preferably white, yellow skin and legs, neat head point, such as small comb and wattles, medium size, and those which grow rapidly.

## When Hens Need Lipic.

Hens that lay soft-shelled eggs do not get enough lime in their feed. They should be fed a different diet with more grit and vegetables. When they drop these soft-shelled eggs in the runways and on the floor it is likely to encourage the other hens to egg eating.

## Value of Good Roads.

Few people take a correct view of the actual profit to farmers and business men in general of good roads, or how much they could afford to pay for them. It is not a fact that in some seasons for weeks together all business in some rural communities is at a complete standstill caused by the impassable condition of the roads, and the loss incurred amounts to millions of dollars annually, caused by not marketing grain or other crops in proper season, and to the merchant, who finds his shelves filled with unseasonable goods. — Weekly Witness.

## Cottonseed Meal and Butter.

Close observation of the quality of the butter made from feeding cows a ration consisting of cottonseed meal and corn silage showed that, contrary to general belief, the butter possessed a good grain and body and was in all respects entirely satisfactory where the churning conditions were normal, says a South Carolina experiment station report. It may be added, says the National Provisioner, that our experience during the past two years convinces us that, during the warm season butter produced from a ration containing cottonseed meal is more satisfactory than that produced from concentrates that yield a relatively soft butterfat. The cottonseed meal "sets up" better at the table. Bran butter showed 92.2 degrees as the melting point; cottonseed meal butter, 93.6 degrees; linseed meal, 91.5 degrees.

## Demand For Farms.

The increasing tendency of city dwellers to buy homes in the country is not confined, as is generally believed, to the very rich. Those of moderate means means are also gravitating toward the green fields. For a number of years it has been the fashion of the rich to spend the greater part of the year in the country, and to occupy the town house but a few weeks at most. Now there is a disposition to make permanent homes in the country, and this desire is not confined wholly to the millionaires. Men with modest incomes are buying homes as far removed from the dust, noise and smoke of the cities as their business will allow. While this exodus to the country benefits directly only farm properties contiguous to the cities, the final effect is to raise the value of such property over a wide extent of territory. If what President Hill, the great railway magnate, says is true, namely, that within the next fifty years most of the now flourishing industries will have become silent because of the exhaustion of the mines and forests and wells upon which they depend, and that the population will then be compelled to the tillage of the soil, the appreciation in the value of farm lands will be enormous. In any event it is the part of wisdom to stick to the farm. It will feed and clothe one and keep a roof over his head whatever happens. — Farm Journal.

## Grinding Corn For Hogs.

Among recent reports received by the Department of Agriculture from the experiment stations is one from the Wisconsin Experiment Station. For the past nine years the station has been conducting tests to determine whether grinding corn for hogs is desirable.

The results have varied a little from year to year, but considering the average of all the tests 117 hogs fed dry shelled corn and wheat middlings make an average gain of 96.8 pounds each, while an equal number fed cornmeal and wheat middlings gained 11.03 pounds each, the feed required per pound of gain in the two cases being 5.19 pounds and 4.88 pounds. In other words, for each pound or gain the hogs fed shelled corn required 0.3 pound more gain than those fed the cornmeal. The saving from grinding, therefore, has amounted to 5.7 per cent. For instance: When corn is worth only twenty-five cents per bushel the saving from grinding amounts to only 1.4 cents, not enough to pay for the

grinding, unless cheap power is available. As corn advances in price it will be noticed that the saving per bushel increases practically three-tenths of a cent with each five cents' advance in the price of corn. Should the price of corn be as high as seventy-five cents per bushel the saving by grinding would amount to a little over four cents per bushel.

## Good Horses in Demand.

The increasing demand for good horses has awakened fresh interest among breeders who have good dams. The Drovers' Journal, in referring to the increasing demands in the Chicago markets, says a survey of the horse conditions presents an inviting field for intelligent breeders. Demand for all classes of horses for industrial and commercial use was never so broad or prices so remunerative. The fact that farmers have been slow to grasp the situation finds the supply hardly adequate to meet the increasing demand. The outlook justifies continued high prices until the surplus assumes proportions to resume exportation of horses in large volume again. The supply can only be increased by enlarging breeding operations, which under the most favorable regime, will require half a decade to produce a reasonably large surplus. The fact that the supply of horses is short should not lead to haphazard breeding. Profits in the horse industry will depend on the quality of the horses produced. The best mares should be selected for the best and the choicest stallions of all breeds of horses patronized. The stream cannot rise above the fountain, and the progeny of sire and dam will inherit the characteristics of their ancestors. The opportunity for large profits in the horse industry was never more promising to the careful breeder that will produce good commercial offerings of all classes.

## Care of Beef Cattle.

At one of the Western Institutes one of the speakers, whose subject was the "Care of Beef Cattle," among other things said: "The farmer should seek to build up the frame and muscles of the animal in early life, by exercise, pure air and plenty of sunlight, with pure water, proper shelter, and a ration composed largely of protein and minerals. As they grow older more carbonaceous foods may be added, so that at maturity or when finished off they may be fed a wide ration, composed largely of carbonaceous or fat forming elements. For best profits in the future as in the past, the feeder must take advantage of the early life of the animal when it is full of vigor and before the muscles are rigid; this makes the best beef. Finish them off rapidly, and when ripe, market. Profits often come by reason of little expense in the way of labor, food and shelter, and in this regard the steer feeder has an advantage. The grain fed to a steer is sometimes worth as much as it costs to fertilize the farm. Again the croppings should be left long to insure good fattening grasses, thus keeping the pastures well mulched, nature's best condition to maintain fertility. The farmer who watches both ends of the business—buys well and sells well—has gone a long way on the highway to success. With these conditions and considerations future profits may confidently be expected. Buy, breed, feed, care for and sell well, and a farmer will be happy and grow to be a broader man, his purse will be wider as the years go by, and when he lets go of his fragment of time he can leave with no pang of conscience because of giving his brother the dyspepsia."

## Why Spring Pigs Die.

The cold rains of early spring kill off many growing pigs because of the lack of shelter and the care and feed of the sow. Professor Henry, of the Wisconsin Experiment Station, in his "Feeds and Feeding," tells the farmer how to manage the sows and pigs, and if his instructions are followed very little loss will ever occur.

Professor Henry does not agree with some breeders who hold that no corn should be fed. He says some corn may be used, but that meals rich in protein—oats, peas, middlings, barley—should supply most of the nourishment.

Feed for the sow before farrowing should be nutritious, but not concentrated, and roots, chaffed clover or alfalfa hay, softened with boiling water, are all highly recommended.

Good flesh is not to be denied under proper conditions and regulations as to character of feed and amount of exercise. The question of exercise is an important one. In summer sows as a rule will get all the exercise needed by the use of pasture, but in winter it is often necessary to drive them about a large lot or up and down a lane for a time every day.

Litter or straw thrown in the yard through which is scattered waste grain will stimulate the sow to exercise in searching for feed, but some means should be used to prevent the sow from lying idle and taking on too much soft flesh.

The feed just before farrowing time should be slopp and limited in quantity, and most breeders agree that the sow should be fed nothing for twenty-four hours after farrowing. For two or three days only a limited quantity of feed should be given.

# FINANCE AND TRADE REVIEW

## DUN'S WEEKLY SUMMARY

Merchants and Manufacturers Are Busy and Collections Are Reported Good.

R. G. Dun & Co.'s weekly review of trade says:

It is still noteworthy that there is practically none of the customary complaint of midsummer dullness in commercial or industrial channels. On the contrary, reports from many cities announce that all the backwardness of the early season in light-weight fabrics has been made up and the liberal distribution of merchandise is accompanied by steady improvement in mercantile collections. Preparations for fall and winter proceed with evident confidence, and lines that usually report frequent cancellations at this season are holding their business nearly intact. The only menace to more new records of iron production is the interruption to ore movement by the strike that has reduced shipments about 2,000,000 tons in three weeks.

Specifications at the steel mills are large, producers being still unable to make deliveries as promptly as desired, but there is a seasonal decrease in the volume of new business which relieves the pressure somewhat. Production is now very heavy but many furnaces that need repairs will shut down unless ore comes forward more promptly.

An undercurrent of increased interest is felt in the primary markets for cotton goods, and there is more evidence that prices will be maintained, while further advances are contemplated in some lines.

Footwear factories have received fairly liberal orders for case goods, but the volume of new business thus far has not equalled anticipations.

Little improvement is noted in the demand for leather, but prices are sustained by the curtailment of production, which has prevented accumulation, and tanners are confident that shoe shops cannot defer action much longer.

Referring to the efforts to suppress the opium trade in China the New York Tribune says: "It was not to be expected that the campaign against this most insidious drug habit would instantly or easily become entirely successful. It will take time and hard work to redeem the empire from the vice to which it has been subjected for ages. But the outlook is distinctly hopeful. In many places much has been accomplished, and throughout the empire the campaign has become popular and fashionable and has the hearty support of the native press. It is probable, therefore, that in a few years the abuse of opium in China will become a less evil than the abuse of alcohol in other lands which vices themselves upon their superior civilization and morals."

### OLCLOTH MATS.

Small oilcloth mats placed in front of stove, tubs and sink, not only preserve the oilcloth, but catch all drippings and may be taken up and washed off as easily as the

# OLDS ENGINES

"BEST BY EVERY TEST."  
U.S. GOV'T REPORT.

Do you want an engine? We have one you can afford to buy. We have been building nothing but engines for 25 years. We guarantee the Olds Engines will run properly. The price is right. The engine is reliable and simple. We treat you right. There is an agent near by to see everything in right and kept so.

We have a liberal proposition to make to you, besides furnishing you the best engine made.

Let us tell you about it, because it will surely interest you. We can furnish you our Type A engine, set up on skids if desired, 3 to 8 h. p. ready to run when you get it—does not have to be set up—no piping to connect, no foundation to build—simply fill with gasoline (or distillate) throw on the switch, turn the wheel and it goes.

Easy to start winter or summer. The cheapest of all engines for farm and stationary power. Has removable water jacket, all latest improvements, and has been adopted by the United States Government.

Send for our catalog of 3 to 50 h. p. engines, and be sure you take advantage of our proposition and save money.

## OLDS GAS POWER CO.,

Main Office: 905 Seager St., Lansing, Mich.  
Boston: 69-75 Washington St., N. Binghamton, N. Y. 21 Washington St., Phila.: 1816 Market St.

## Railroad to Mecca.

The railroad line to Mecca is being built by Turkish soldiers, under the supervision of a German civil engineer, and the cost is being defrayed, in part, by Moslems in all parts of the world, who make voluntary contributions. The remainder of the expense is covered by special taxes.

## A WOMAN'S SUFFERINGS.

### A Dreadful Operation Seemed to Be the Only Outcome.

Mrs. Clyde Piskey, Bridge St., Belding, Mich., writes: "I had inflammation of the bladder, and the trouble had gone so far in five years that my physicians said nothing but an operation would cure me. Awful bearing down pains, lacerations, back-aches and headaches tormented me, there were spells of dizziness and faintness, the kidney secretions were like blood and passed with intense pain. I had lost 30 pounds when I began using Doan's Kidney Pills, and was dreadfully nervous. In one week I felt better and to-day I am a well woman and have been for a long time."

Sold by all dealers. 50 cents a box. Foster-Milburn Co., Buffalo, N. Y.

## A Music Typewriter.

Lourenz Kroma of Vienna has invented a music typewriter. With the aid of this instrument the composer may produce a typewritten scroll without the trouble of making the characters by hand. All that he has to do is to place himself at the piano and give free play to his creative fancies. Every stroke upon the key is registered in regular musical characters upon a proper scroll wound upon a drum. The machine operates through a system of electric contacts with the piano keys. The registering apparatus, which resembles an ordinary typewriter in size, may, in order to remove discordant sounds, be placed at a distance from the piano, even in an adjoining room.

## PHILIPPINE "DOBIE ICH."

### Itching Pimples Covered Body—Discharged For Disability—Found Cure in Cuticura Remedies.

"While stationed in the Philippines I became subject to the 'Dobie Itch.' Small, white, itching pimples formed under the skin, generally between the toes, on the limbs, between the fingers and under the arms. I got so bad that I was confined to my quarters a week at a time. I was discharged from the Engineers by reason of disability contracted in line of duty, and when I had the trouble again, my druggist recommended Cuticura Remedies. The immediate relief was manifest with my first purchase and the malady quickly yielded to the Cuticura Remedies. It has never recurred since I used the Cuticura Remedies. John S. Woods, 221 South St., Brooklyn, N. Y., Oct. 21 and 26, 1906."

## Letters Sent by Skyrockets.

An ingenious method is employed to deliver letters to the islands of the Tonga group, in the Pacific ocean. These islands, guarded as they are by dangerous rocks and breakers, are hazardous to approach, and would often, if the ordinary routine of delivery were employed, have to go letterless. To overcome this difficulty the steamer which carries the mails is supplied with skyrockets, by means of which letters are projected across the danger zone to the shore. A floating postoffice, consisting of a painted can, is attached by chains at the extreme point of Tierra del Fuego, in South America. To this strange postoffice, which is under the joint protection of all nations, every passing ship sends a boat to post and collect letters.—Baltimore Sun.

## MICA AXLE GREASE

Works well—better than any other grease. Coats the axle with a hard, smooth surface of powdered mica which reduces friction. Ask the dealer for Mica Axle Grease.

## STANDARD OIL COMPANY

Incorporated

## SAWYER'S EXCELSIOR BRAND

### Oiled Clothing and Slickers

The best of absolutely water-proof clothing for all outdoor work—stockings, farm-clothes, umbrellas, moccasins, etc. Don't buy a garment until you see Sawyer's Excelsior Brand.

If your dealer does not have "Sawyer's" send us for catalogue and price.

## SAWYER'S EXCELSIOR

H. M. SAWYER & SON, East Cambridge, Mass.

Do you want an engine? We have one you can afford to buy. We have been building nothing but engines for 25 years. We guarantee the Olds Engines will run properly. The price is right. ## HAT-RAISING CONDEMNED.

### Austrian Proposes the Military Salute as a Substitute.

Count Johann Harrach, one of the greatest nobles in Austria, is heading a movement to abolish hat-raising as a form of salutation, and to substitute the military salute. The supporters of the movement declare that this exposure of the head induces colds, influenza and other ailments, and even baldness. It might also be added that it causes hats to become worn out much more rapidly than they would otherwise be.
