BEGAN YOUNG

Had "Coffee Nerves" From Youth.

When very young I began using coffee and continued up to the past six months," writes a Texas girl. "I had been exceedingly nervous,

thin and very sallow. After quitting coffee and drinking Postum Food Coffee about a month my nervousness disappeared and has never returned. This is the more remarkable as I am a Primary teacher and have kept right on with my work.

"My complexion now is clear and rosy, my skin soft and smooth. As a good complexion was something I had greatly desired, I feel amply repaid even the this were the only benefit rived from drinking Postum.

"Before beginning as use I hal suffered greatly from indigestion and eadache; these troub es are now un-

"Best of all, I changed from coffee to Postum without the slightest inventence, did not even have a hendache. Have known coffee dringers who were visiting me, to use Posm a week without being aware that they were not drinking coffee.

"I have known several to begin the se of Postum and Irop it because they did not boil it properly. After explaining how it should be prepared ey have tried it again and pro-

nced it delicious. Name given by Postum Co., Battle reek, Mich. Read the booklet, "The oad to Wellville," in pkgs. "Thore s

A horseman suggests that during clear weather it is well to turn the work horses out in the barn-lot at nights. Give them some hay and leave them out all night. They like to roll and after sweating and working hard all day they do not enjoy standing in the barn.

Pig Rations.

The following ration for pigs is commended to make them grow, and yet not get "potbellied," viz : Two parts of middlings, two parts cornmeal by weight mixed, according to Professor Henry. For every pound of this mixture feed one or two pounds of skim milk. A little offmeal may be used, if it can be secured cheap enough, but at present prices this feeding stuff rules too high for any considerable use. Feed the young pigs three times a day and be sure to give them a good run on pasture where they will get exercise and green forage as well, is pos-

Care for the Nest.

Do you know that you can train a hen to be a poor layer?

Do you know that she can and will keep her eggs when ready to lay for a whole day?

If this condition is allowed to continue she may and probably will lay fewer and fewer eggs, finally becoming an indifferent layer, hence the necessity of having plenty of clean, comfortable nests.

Did you ever notice how shyly the young pullet will go about looking for secret place where she may stealthily deposit her precious eggs?

How very particular she is about it! If there is an insufficient number of nests, or if they are unclean, or too much exposed she is likely, after some delay, to lay the egg on the floor and among the other hens, which may lead to eng eating.

Comfort is one of the essentials of egg productions, and what is more necessary than handy, clean and comfortable nests?

The Care of Collies.

Here are a few words on the general care of a coille dog given by a

writer in Recreation: In all favorable weather wash the Sunday school class on the subject dog once a month and in summer once of "Jacob's Ladder," when one of each week. Feed him twice daily of cooked food. Do not keep him too fat Good muscular condition and a smart, alert collie are not the result of too much feed. Once a week give him a teaspoonful of powdered sulphur in a pan with some milk. It keeps his blood in fine condition. Use a medicated animal spap when washing him.

> Disinfect the kennel with crude carbolic acid once a month. In fall and winter, when washing is out of the question, owing to the unfavorable weather, dust him through all his dense coat with a tobacco dust powder. It is a fine method of keeping his skin clean and insects off after contact with other dogs. Have him clipped in summer, if convenient, and let him go on the vacation with you. He will love the water, and it will be a sin to leave him home.

"Once owner of a collie, always an owner." is an old but true saying. No circumstances will prevent the keeping of a collie after they have once won you. We know the truth of this in a dozen instances. They are the Waste pride of every one who possesses them, and will always be first in the heart the consumer paying for of a strong man or woman who is fond e gets. It is doubtful if in of the dumb but true.

Birds That Eat Scale Insects.

All told, 57 species of birds have been found to eat scale insects. It is interesting to note that this number comprises representaives of 12 families, differing widely not only in structure but in habits. They were distributed as follows: Nine woodpeckers, two jays, three orioles, eight sparrows, one waxwing, six viroes, 11 warblers, two wrens, one tree creeper, two nuthatches and eight tits of the tithouse family, one kinglet and one gnatcatcher of the Old World warbler family, and the varied thrush and the bluebird.

At first thought it seems strange that the large birds should take the trouble to pick up such small insects as scales. Yet the numerous representation of woodpeckers on the list and the fact that the grosbeaks among the bulkier species are most conspicuous scale destroyers prove it unsafe to assume that a direct relation exists between the size of a bird and its insect food. At the other extreme of size among scale eaters are some veritable feathered midgets, as, for example, the ruby-crowned kinglet, the black-tailed gnatcatcher, and the bush-tit, the last of which makes more than one-fifth

of its food of scales. Among the majority of these birds, both great and small, there is noticeable one similarity of habit. They are tree frequenters. On their arboreal excursions they must constantly come across scale insects, and as the latter are no doubt nutritious and are toothsome to the avian taste, it is only natural that birds should feed upon them. few species which do not often visit trees, but which are included among the birds known to eat scales, probably secure them very rarely.-In-

Notes About Horses

If your horse is out of condition, do

you know why? If the feed and care are what they should be, then look at his teeth. See that the grinders come together evenly, and smooth off the sharp points. Half the pleasure of the country life

lies in the ownership of a good horse. Every farmer should have a horse that the wife and daughter can ride and drive, as well as the boys.

In selecting such a horse, choose one about fifteen hands and one or two inches high, weighing about 950 to 1000 pounds.

He should have a good even disposition, and go equally well in harness or under saddle

Of all the fools who drive horses the ones who rush a horse down hill are the worst.

It weakens the tendons and nerves, iars the shoulders and springs As the cool nights come on be care-

ful about putting your horses in the

stable when heated from work or driv-

ing. Give them a good rubbing all over with a towel or cloth, and put on a light woolen blanket. If the blanket becomes damp, put on a dry one for

the night. It is still better to rub the borse until he is dry. It does not take long, and it pays, though few farmers will

It takes much patience to teach horse seven or eight years old to do new kinds of work. But let patience have her perfect work: the horse is not so much to blame after all .- Farm

Long Chicken Runs.

The following from the Farm Press ontains some very sound advice.

I never yet saw a chicken yard too ong, but I have seen a great many that were too small. I never knew chickens to get sick and make trouble when they had plenty of room and plenty of green stuff. It costs somehirr to fence a long run, but it pays.

A yard twenty feet wide and two hundred yards long may be plowed and cultivated with horses. If a succession of green stuff is grown, starting in the spring and reseeding at different times during the summer, a yard like this will grow enough to almost feed thirly or forty laying hens. Such things as peas and oats may be planted very early in the spring and by having runs may be closed and different grains and regetables may be planted in season, A great deal of picking may be had

from corn. They may eat off the young stalks and they may let some of hem grow up, but in any case the chickens get the benefit. Rape is another good crop to grow. It may be planted almost any time between spring and early fall. Radishes, bests, suckwheat, in fact, almost anything that grows on the farm, will come in all right in the chicken yard.

You may plant in rows and culti vate occasionally, you may sow broadcast. You may leave the chickens in the yard or turn them out until the stuff gets fairly started, according to circumstances. It makes but little difference how you manage, so long as you fit enough ground and plant enough to keep the poultry busy.

I prefer a poultry yard in an or chard, preferably of small fruit trees such as plums, cherries, apricots, prunes and pears. The partial shade from the trees is beneficial to poultry. In this way you don't feel the expense of giving a whole lot of ground to a poultry yard. You can just run wire poulnetting down the rows between the trees and partition off a yard as wide or as narrow as you want it. The width makes but little difference: length is what you want so you can get the horses in to do the work.

I have seen little yards that were supposed to be dug over frequently. The digging gets done about once; nobody has time after that for any such backaching job. The only way to have a chicken yard cultivated is to do it by horsepower. You can't work crossways in a narrow lot; you can't have a chicken yard very wide but you can have it the whole length of the orchard and it will pay to do it.

Bungalow Houses.

The bungalow, the camp, or what ever one's retreat in the wilderness or by the shore is called, is said to be influencing architecturally the building of an occasional all-the-year-round house in suburban and near-by coun try places. One big living room running the length and nearly the breadth of the house, with a small kitchen tucked in an out-of-the-way corner, three or four sleeping rooms overhead, and a porch suitably screened to allow outdoor sleeping quarters, make up the ideal residence. -Boston Transcript.

Modern Annoyances.

The following advertisement is published in the Kriesblatt, a newspaper published at Hoechst, near Wiesbaden: Can any one favor me with the names of the balloonists who, when passing over the village of Ried last Thursday evening, dropt a bag of ballas down my chimney and completely ruined a fruit tart which I was cooking?-Julia Schmidt, 14, Britzel-gasse, Ried."-Literary Digest.

PEARLS OF THOUGHT.

The house of God is the heart of

There is nothing "just as good" as

The price of character is pain and sacrifice.

One truth is stronger than a thou sand Hes.

Skepticism is the ruin, not of faith merely, but of morals. The fountain that gives exit to bit-

ter streams is not sweet. A fair character only condemns it-

self by self-condemnation. It is the rainbow and not the lightning that best proves God.

The pleasures of life degrade us; its responsibilities ennoble us.

The man who bears his neighbor's burdens will not feel his own.

Nothing betrays the weakling bet-

ter than a superficial sternness. Pulpit pyrotechnics are not the only or the chief mark of religion.

You will never make a fisher of men while filled with the fear of man. A liar thinks he is walking the narrow path between a whole truth half a lie.

The kingdom of God is created of plain people who went about doing

The mites and the jots and the tittles govern the destinles of the uni verse.

Some people believe that putting a lie into the collection changes it into a truth.

The folks who make the worst mistakes are those who follow the head instead of the heart.

The sailor may not know astronomy, but he practices it, and he is better to command the ship than the astronomer.-Home Herald.

A LITERARY COINCIDENCE.

Peculiar Sequel to an Author's Flight of Imagination.

The following instance of imagination being verified by fact may interest students of such matters. Two years or so ago I wrote a historical romance which has recently appeared under the title of "Fair Margaret." In that romance the name of the hero is Peter Brome. The father of this Peter Brome is represented in the tale as having been killed at Bosworth Field. After the appearance of the book I received a letter from Colonel Peter Brome Giles, the High Sheriff of Bucks, asking me where I obtained the particulars concerning the said Peter Rrome. I answered-out of my own head. Indeed, I distinctly remember leventing the name as being one that I had never heard, and the fact of the father's death on Bosworth Field I introduced to sait the exigencles of the story. In reply to my request for further particulars Colonel Brome Giles kindly sent me a letter from which, in view of the curious interest of the matter, I am sure he will forgive me for publishing the fol-

lowing extracts: Your hero's father was the son of Sir Thomas Brome, the secretary of Henry VI. He was, as you relate, killed at Boswortn, but I never heard they had property in Essex, but had In Suffolk and Norfolk. * * * One branch of the family took the bird (that is, as a coat of arms) as you describe. * * * The father of your hero was the first Peter, and was born in 1437 and was 50 when killed. . . . the Peter of 1427 there have al ways been Peter Bromes; my father was, I am, and so is my boy. We assumed Giles in 1761.

To this I sent the following answer: All'I can say is that the coincidence is extremely curious (for I knew noth ing whatsoever of all this), so much so indeed that, taken in conjunction with some similar instances which have occurred to me, almost do I begin to believe in retrospective second sight.

If I may judge from my own experience, such coincidences (and, as any one who has read the tale in question will admit, this is a very remarkable coincidence) are by no means uncommon. Although the particulars are too long to set out, four times at the very least have they happened to myself in the case of my own works of imagination. I do not know if any of your readers can suggest an explana-The odds against such exact tion. similtudes seem so tremendous that I confess I am unable to do so .- H. Rider Haggard in the Spectator.

Latest Fashion in Swords and Bayonets

A new bayonet and also a new sword have been decided upon, but it is not known when they will replace the present regulation weapons. The sword is designed for thrusting and will be long, straight and narrow, after the pattern of the rapier. The bayonet, too, will be long and thin, so as to give its wileder a good reach. It was said some time ago that the days of long range fighting had made the bayonet almost obsolete, but the Russo-Japanese war proved that hand to hand fighting has by no means been relegated to the past.-The Court Journal,

A Texas Pecan Tree.

The famous pecan tree in this county down at the "Bend" on the Colorado river, owned now by P. B. McCoury has the usual large crop of fine pecans on it this year. The crop on this tree was sold recently as it stands on the tree for \$150. The purchaser expects to make that much money out of the crop as clear profit. The nuts sell at from 50 to 75 cents a pound every year.-San Saha correspondence Sar

From an fronmaker's point of view the greatest achievement during the revolutionary period was the mak-ing of the great West Point chain This massive chain, which has prob-ably never had an equal since the first hammer struck upon the first anvil, was stretched across the Hudriver at West Point to prevent son river at West Point to prevent the British fleet from making a second attack upon Kingston and Albany. It was nearly a mile in length, and weighed almost 200 tons, many links being as heavy as an or-dinary-sized man. To complete it in six weeks 60 men hammered day and night at 17 forges, and the cost of it was placed at \$400,000.—Indianapolis News.

Desertions from Army.

Published records of desertions from the United States Army in the last year would seem to show that the cavalry arm is responsible for most of them. The coast artillery corps and the infantry are next in order, with the field artillery showing a smaller proportion. The en-gineers corps reports a few isolated cases of "French leave," and the signal corps is happily almost free from the evil. Of course, the men in the two last-named branches of the service are not numerous as in the three principal arms, but proportionally they stand as above. De-sertions from the four negro regiments are fewer than from white reg-

Illinois an Oil State,

Without the notice of any persons other than those immediately con-cerned, Illinois is becoming an oil State. Prior to 1905, the --nual production of oil in Montgomery county, the only producer, was from 200 to 500 barrels. In August, 1906, the daily production exceeded 25,000 barrels. In June, 1997, the daily production averaged 112,000 barrels from 5,214 wells in Clark, Cumberland, Crawford and adjacent coun-ties. The total for the year 1906 was between 4 and 5 per cent of the total for the United States, and this from a State which two years before was not considered an oil State at all.
