Cradles of the Quirinal

There is no prospect that the daughter born to the King and Queen of Italy a few days ago will be with out a resting place, for the royal palace is stocked with cradles, most of Cem presents when the crown price was born. Seventcen of them came from different parts of the world, one from Italians resident in New York and another from the Argentine, embroidered in Indian style with colored grasses. In addition there is a sumptuous cradle presented to the queen when little Princess Yolande was born. The base is of The base is of bronze, delicately chiseled, and under the arch Romulus and Remus play with the traditional wolf. Above stands an angel holding a laurel wreath. The cradle is of solid silver, surrounded with shields of all the districts of Rome.

Power of Gasoline.

In place of fourteen strong arms pulling seven cars, with another pair at the steering oar, now a four-cylingasoline engine four-cycle pushes the craft along at ten miles an hour. A solid eighteen inch propeller with a reversing clutch propels the thirty-four-foot boat. Two gaso-line tanks, one with a capacity of twenty-five and the other with seven-ty-five gallons of the colorless fluid in which is locked up so much effort, ad mit, according to Popular Mechanics, a radius of 200 miles.

SUFFERED TWENTY-FIVE YEARS

With Eczema-Her Limb Peeled and Foot Was Raw—Thought Amputa-tion Necessary—Believes Her Life Saved by Cuticura.

"I have been treated by doctors for twenty-five years for a bad case of eczema on my leg. They did their best, but fulled to cure it. My doctor had advised me to have my leg cut off. At this time my leg was pealed from the knee, my foot was like a piece of raw flesh, and I had to walk on crutches. I bought a set of Cuticura Remedies. After the first two treat-ments the swelling went down, and in two months my leg was cured and the new skin came on. The doctor was surprised and came on said that he would use Cuticura for his own patients. I have now been cured over seven years, and but for the Cuticura Rem-edies I might have lost my life. Mrs. J. B. Renaud, 277 Mentana St., Montreal, Que., Feb. 20, 1907."

The use of wigs by judges and barristers is not very ancient. It was introduced toward the end of the seventeenth or at the beginning of the eighteenth century when it had become the fashion at court. Bishops continued to use wigs longer than their clergy, but they have dis carded them for many years now.

many hens will produce so many We saw a barn the other day which times that much. Farmers who have had never been stained up from tha tried raising hens with poor success accumulation of manure along the may laugh at this as theory. Perhaps they might do better to examine the sides. In fact, no manure was ever Storrs experiment more fully and thrown out. Every day it was thrown into a spreader, and when it find out-as they can-just why they was full the manure went on to the did not do as well .- New Haven Register.

Maintaining Fertility.

The most important matter farming is maintaining the fertility of the soil so that there will be no diminution of crops. The necessary thing in maintaining the fertility of the soil, says a writer of note, and in supplying the needs of the average worn out soil, is organic matter. If the supply of organic matter is maintained, the supply of fertility is generally maintained. Increasing the supply of organic matter increases the amount of nitrogen in the soil, because the supply of nitrogen comes almost wholly from the amount applied in the organic matter

Then organic matter is needed to keep the supply of available mineral plant food ample. There is enough potash in the typical soil to grow corn 1000 to 2000 years, yet if the supply of decaying organic matter in the soil is not maintained we find that in a very few years the soil will show signs of wearing out. The reason generally lies in the fact that there is not enough decaying humus in the soil to keep the supply of available potash ample, and the crop suffers for want of the food when the soil is really rich in that food. It is in the unavailable state

and the crop cannot use it. Nine times in ten when we find near the end. Use 3-16 round iron a soil that is said to have worn ont, for lock. Take a square bend, put in it only needs the increasing of its hole and rivet just enough so it will supply of organic matter. As soon work rather tight. When it wears as the farmer applies a cast of maand works easy tighten again. Dotnure or grows a crop that has a heavy ted lines show lock turned ready for root system and causes a considerable organic matter to be left in or tivator for ten years, writes a Penn- to fall upon the soil each year, like clover or alfalfa, we find that the fertility of the soil increases and that it again produces as abundant crops as it ever did before. God made the minerals, and judging from the Hens that acquire the habit of layway He made all else, He made an ing soft-shell eggs should be watched abundance of them. He expects us very carefully in order to break them to see to it that the supply of organic of it. There are two causes for soft matter is maintained to meet the needs of our crops. If we do this the eggs. One is feeding too much stimulating food; the other, not enough fertility of the soil will be main-shell-forming material being fur-

Hiving a Swarm.

When bees get to hanging out on the hive, I raise it from the bottom board one inch, and then if they do not stop raise them higher, explains a little epsom salts to their drinking a bee keeper in Farm and Home. 1 think that raising them is a very good crushed oyster shells should be fed preventative of swarming. A certain percentage of colonies will swarm in spite of anything that may be done. It takes but little to induce swarming during a good honey harvest. Bees left to themselves will generally send The second quarterly report of the out one swarm in a season, often a experiments in the housing and feedsecond swarm, sometimes a third. In hiving swarms it frequently happens that the bees take wing when dumped in front of their new hive instead of crawling into it. We The first test made was for the have had a few swarms go back

Newspaper Loyalty.

The other night at a little gathering of magazine writers the talk centred around Mr. Bryan's charges against the New York newspapers. "I have worked for many news-

papers," said Robert H. Davis, cf Munsey's, "and I never knew one yet that wasn't true to its readers. When I was a cub I worked on the Carson Appeal, out in Nevada. Late one night when we were pulling off the 300 circulation on a Washington hand press a half dressed man with a stubby black beard slipped in through the door and asked if we had a suit of clothes we could let a feller have. There were always a lot of old clothes hanging behind the press that anybody was welcome to. We told him to help himself. Pretty scon he was well rigged out. He started to leave, but hesitated, watching the printing, 'What does the paper cost?' he asked. We told him \$8. He dug up the money. 'Where should we send it?' 'I'll let you know when I git settled,' he said, 'I'm traveling.'

With that he went out. In about half an hour we heard the clatter of hoofs and the clanging of weapons, and looking out into the moonlight we recognized the Sheriff and four heavily armed deputies. They came in. Had we seen a half-dressed man with a stubby black beard? We had, Which way did he go? I started to tell them that he had gone around the corner, through the side street, toward the hills. The foreman nudged me to keep quiet. 'I'll attend to this,' he said. Then he went on to say that the man had gone down the main road to the canyon. They mounted and rode away in the wrong direction.

"Our visitor was Black Bart, the highwayman, who had just escaped from the penitentiary.

"'What did you do that for?' I asked the foreman with some indignation.

'Great Jehosephat!' he said, 'you wouldn't go back on a subscriber, would you?' "

HORSE LIVES IN BAKERY.

Sheep and Dogs Complete Happy Chicago Family, and Children Sleep in Ice Box.

An Italian bakery where a sheep, a dogs led a happy horse and three life, and an Italian meat market where two children sleep in the ice box were among the novellies discov-ered in a tour of inspection by Dr. J. D. Kelso of the Chicago Department of Health.

Kelso gave orders for the removal of the animals from the bakery and told the mother of the children that an ice box was hardly a healthful sleeping place for children.

This was in a quarter where it is hard to make people understand why inspectors bother them.

Frock Coats in Congress.

Congress is eliminating the frock coat habit. More than half the members of the new Congress have shown their disapproval of the time honored costume by appearing on the floor of the House in the regulation business suit of tweed. Red and lavender neckties can poll a larger vote than the somber black string tie, and old members loyal to the moun coat ind its accessories, are discussing with despair the future of congressional tan shoes.

These sartorial belligerents declare that he revolt against the unwritten law concerning the frock cost habit is chiefly in the interests of comfort. Whether the regulation statesman's garb would be a matter of pride with them in questioning whether they would appear to petter personal advantage in solemn black or most becoming blue, they insist, is a matter of secondary consideration.

Fear expressed by members of the House for the dorm of the fretch coat has already disturbed the equanimity of the Senate by the appearance of a couple of belligerents in the ranks of this black coated body,-Washington Star.

A Neighbor of Ead Repute.

The skunk is probably as numer-ous in most localities as ever it was, since its food resources are increased rather than diminished by rural civilization, while its natural ene-mics are reduced. Of mankind it seems perfectly fearless, and when one is met on the road (usually to-ward evening, when it begins its nightly wanderings) it keeps steadily on its course, and the man, if he is wise, does not dispute as to right of way. It habitually digs a deep bur-row for a home, but may take possession of a woodchuck's hole, a cave hollow stump or stone wall, and of ten seeks a lodging beneath a house or barn, making its presence known sooner or later during the winter by stench that compels the landford to evict the intruder straightway. Ernest Ingersoll.

Explosions In Sewers.

City people who are occasionally startled by seeing a manhole cover blown from the pavement generally the blame to leaking gas ascribe mains. But there are probably many other sources from which dangerous gasses find their way into sewers, and one of these is indicated by an investigation recently reported to the American Chemical Society by to Prof. A. A. Breneman. He showed that the entrance of a mixture of gasoliue and soap into drains and sewers from garages, factories, and other places where such materials are employed for washing, is sufficient to account for the liberation of much combustible vapor, which may play a part in sewer explosions.-Philadelphia Record.

General Demand

The

of the Well-Informed of the World has always been for a simple, pleasant and efficient liquid laxative remedy of known value; a laxative which physicians could sanction for family use because its component parts are known to them to be wholesome and truly beneficial in effect, acceptable to the system and gentle, yet prompt, in action.

In supplying that demand with its excellent combination of Syrup of Figs and Elixir of Senna, the California Fig Syrup Co. proceeds along ethical lines and relies on the merits of the laxative for its remarkable success.

That is one of many reasons why Syrup of Figs and Elixir of Senna is given the preference by the Well-Informed. To get its beneficial effects always buy the genuine-manufactured by the California Fig Syrup Co., only, and for sale by all leading druggists. Price fifty cents per bottle.

Oldest Scottish Peer.

The oldest of the Scottish peers is the Earl of Wemyss, who is now in his eighty-ninth year and who has lived in the reign of five sovereigns. He is still a very active man and very fond of shooting, fishing and toring. He makes frequent toches in the House of Lords. 1 motoring

Asphalt Deposits Found.

Asphaltic layers have been found in Syria, near Kferie, a village about 25 miles northeast of the port of Latakia, along the road leading toward Aleppo, which have been de-clared by competent mining engi-neers to be not only rich in asphalt out also practically inexhaustible.

experiments are being conducted with pens of White Wyandottes and Buff Orpingtons, and careful observations have been made of the quantity and character of the food consumed, the cost of the different systems of feeding, and the results as shown in egg production and fertility.

The conclusions drawn from the experiments go to show that during the three months ending May 31, the ordinary fed birds cost much less for food; that they produced nine eggs more; that the White Wyandottes yielded 107 in excess of the Buff Orpingtons; that the fertility was greater by 0.6 in the Buff Orpingtons; that the hatching percentage was greater by 3.81 in the Orpingtons than in the Wyandottes; that the fertility of eggs from the hopper-fed birds was greater by 0.29 than where ordinary feeding was employed, and that the percentage of hatching was greater from hopper-fed birds by 0.22 .- Weekly Witness.

The Profit From Hens.

Storrs' Agricultural College is fulfilling its proper mission in its exfor the benefit of the farmers of the State. With White Leghorn hens it has demonstrated that it is possible to make on eggs alone a net profit of other breeds the profit is less, falling as low as ninety-eight cents per hen in the case of Rhode Island Reds.

This is only a partially finished experiment. The profit from poultry is The next morning as the bees not from the eggs alone, and this is the least reliable and sometimes the least profitable part of poultry raising. Moreover, the price set for eggs is slightly over twenty-two cents a to store a great crop. The other dozen-surely a conservative price, colony will be so reduced in numeven for the farmer to receive, as eggs are selling now. It is probable that the State Agricultural College the first queen that hatches and probwill continue the experiment to a ably give much surplus. It will make a good, strong colony by the more illuminating extent.

Paper Making In Japan.

Paper Making in Japan has been very active for the last year or so. New companies have been formed, and old ones enlarged. Most Japan ese mills use steam for motive power, and nearly all the machinery used is of American make.

AN IMITATION TAKES FOR ITS PATTERN THE REAL ARTICLE

There was never an imitation made of an imitation. Imitators always counterfeit the genuine article. The genuine is what you ask for, because genuine articles are the advertised ones. Imitations are not advertised, but depend for their business on the ability of the dealer to sell you something claimed to he "just as good" when you ask for the genuine, because he makes more profit on the imitation. Why accept imitations when you can get the genuine by insisting?

REFUSE IMITATIONS-- GET WHAT YOU ASK FOR!

The Swarm Catcher

two or three times. We recently got the thought that a little spraying would overcome this difficulty. We have tried it on a few swarms with good results.

While the cluster is yet hanging on the tree take a small spray pump. or syringe, and wet the cluster of bees with one or two guarts of cold water, then take your swarm catcher shown in the cut and turn it up under the cluster and get them into it. They will cling together while you carry them to the hive, and when dumped in front of it they will not readily take wing again, but will run into it. Swarms that have been hived a few hours and seem restless. or cluster mostly on the outside of their hive, can also be made more periments with poultry raising, made tractable by a little spraying. Bees

need a great quantity of water during summer, and the beckeeper can supply their needs in a few minutes where it would require hours for about \$1.19 per hen per year. With the bees to gather it themselves. Put the new hive containing the swarm on the old stand, exactly where the old hive stood and place the old hive close beside the new one. go forth from this hive to work, they will nearly all return to the old place and enter the other hive, making that colony very strong, and in condition bers that the bees will not be moved to swarm again and will fall in with
