PASSING OF OLD CRUISER Brooklyn, Effective Warship of

1898, on Way to Junk Heap. A triffe over eleven years ago the A dmiral Schley, in the battle of San-tiago led the van in the pursuit of the flying fleet of Admiral Cervera, and it was shot from her guns which did the greatest damage to the Spanish havy. Eleven years ago the Brooklyn was the pride of the American navy, and an up-to-date model of her type of battleship. Today she is lying partial-ly dismantled and will probably never see active service again. Her hull is

perfectly sound, her engines in perfect condition, and in every way the vessel is as good as she was when she showed her power in Cuban waters.

The navy department has ruled, however, that she is out of date, and she will be allowed to go into decay, while a more modern and more expen sive vessel will take her place in the line of the Atlantic squardon of the United States navy. Without considering the sentimental and historic interest that attaches to the Brooklyn,

it appears to the lay mind as a serious mistake to allow so formidable a fighting craft to go to the junk heap. -Binghamton Press.

NEW STRENGTH FOR WOMEN'S BAD BACKS.

Women who suffer with backache, bearing down pain, dizziness and that constant dull, tired feeling, will find comfort in the advice of Mrs. James

Wright, of 519 Goldsborough St., Easton, Md., who says: My back wasin a very bad way, and when not painful was so weak it felt as if broken. A friend urged to try Doan's

Kidney Pills, which I did, and they helped me from the start. It made me feel like a new woman, and soon I was doing my work the same as ever." Remember the name-Doan's. Sold by all dealers. 50 cents a box. Fos-

ter-Milburn Co., Buffalo, N. Y.

Maryland is to be congratulated on the rejection of the proposed disfran-chisement amendment to its constitution. For the second time the people of that state have repudiated a dishonest scheme to limit the franchise. not by imposing tests intended to bear on the ignoran, and the unde-sirable as such, but by creating artificial and unjust distinctions and establishing a fantastic claim of eligibil-ity based on descent. This pernicious agitation in Maryland should now end. It has been insincere and narrowly partisan in motive from the start. There is no excuse for a "grandfather clause' in a state like Maryland, where the race issue is not acute .-New York Tribune.

Tobacco For Horses.

A horseman says he has cured horses and colts of worms by pulve:izing tobacco leaves with his hands and placing a small quantity in each feed of shelled cats for a few days. He says the worms will be expelled without any ill effects to either the horse or colt. Colts will soon learn to like the tobacco and eat it freely. He says that many a colt that is now kept poor and scrawny by the worms, if given pulverized tobacco leaves in this manner, will soon begin to thrive and take on flesh -- Epitomist.

Poultry For Market.

When scalding poultry for market, it is best to first dry pick the legs, so that they will not necessarily be placed in the water and change color. Neither the heads nor the feet should touch the water. The water ought to be as near the boiling point as possible, without boiling.

The way to "plump" a dressed fowl is to dip it for ten seconds in water nearly or quite boiling hot, and then immediately in cold water. Hang in a cool place until the animal heat is entirely out. Plumping gives the fowl a much more attractive appearance.

A duck is not fully matured until it is about two and a half years old .-American Cultivator.

Don't Mix Grit in Food.

E. C. Dow, a poultry expert of Maine says on the subject of food:

"One of the most common of the various wise sayings of some poultry teachers is that the first feed to the newly hatched chicks should be grit in the form of fine sand or some similar substance; but this advice is always qualified by the caution not to mix the grit with the food, as to do an means sickness and loss by bowel trouble. If grit cannot be safely mixed with the food and fed, even in small quantities, why feed it at all? We feed the hons grit by keeping a supply where they can help themselves. At the same time it works no injury to the mature fowls if the grit is mixed with the mash, provided it is not used in excess; but since it is not possible to tell what the hen needs to regulate digestion it is wise to let her help her self. The gizzard of the chick is free from sand or srit, and should remain free until old enough to begin to grind its own food. That is usually at the age of ten days. Before that they should be fed on food which can be digested without the aid of grit."

Accounts With Each Cow.

The Connecticut station sugrests hat accounts he kept with cows to see whether they are profitable boarders, or not, crediting each cow with all the milk given by it, put at the local market price for milk. Measure the milk by weight, reduce this to qua ta by dividing by 2.15 and then multiply by the price per quart. Credit her with \$2 for the value of the calf and \$19 for the value of the manure. This will make the total credits, except the p ofit you make in selling her, the feed you have raised on the farm, as shown by the difference between its actual cost and the market price. Charge the cow with the cost of feed at market rates and the following fixed charges: Bed ding for one year \$2, service cf bul! \$1, labor \$27, interest on investment 6, taxes 60 cents, insurance 4) cents depreciation \$8. Total \$45. In figuing the interest on investment the cow is given a value of \$60 and her share of the value of the barn, too's and other equipment is placed at the same figure. Five percent on \$129 is \$6. In figuring the labor item, it is estimated that one man, receiving a salary of \$45 per month, could do all the necessary work in the care of twenty cows and the marketing of their product. This would make the labor Item \$27 per cow .- Weekly Witness.

tightened or loosened at will. Doors should be built at intervals from the top to the bottom to that the silage may easily be got out. It is not neces sary to put a roof on this silo, but it is much to be preferred. This style of the silo should be kept well painted, both inside and out. If properly built and taken care of a stave silo is durable, rigid and air-tight.

Arsenate As Insecticide.

Many gardeners and fruitmen advise the use of paris green in connection with Bordeaux for trees, potatoes, etc. After using paris green and also arsenate of lead in conjunction with Bordeaux some have found that it was very difficult to get just the right amount of paris green, as a little too much will kill the folfage and only a slight amount less will fail to kill the bugs. With arsenate of lead one does not seem to damage the follage, however much is used, and it sticks better to the leaves.

Both of these poisons are excellent insecticides, each possessing certain advantages. Paris green is cheaper, as far as poisoning qualities are concerned, and is also more rapid in action than the arsenate of lead, and hence is preferable where hordes of insects are inflicting great daily losses, Experts generally advise the use of paris green wherever immediate results are desired, and when Bordeaux mixture is used with this poison there is a good chance of its remaining on the follage for a little while at least.

On the other hand, arsenate of lead though slowed in action and more costly, is very adhesive and is specially useful wherever it is desired to protect the follage from leaf feeders during a considerable time, and particularly where there is no pressing need of immediate results. Furthermore, argenate of lead can be used in almost unlimited quantities without injury to the follage, something which is not true of paris green. Some advocates of arsenate of lead advise its use in very large quantities where immediate results must be obtained, and the wisdom of following this course must be determined largely by local conditions since the cost is considerably greater.

Some growers of potatoes have ex perienced difficulty in killing potato beetles with arsenate of lead applied with certain horse spravers. This trouble is due to the fact that certain machines make a small amount of water po a great way, and, as a consequence, unless the poison is very concentrated form there will not be a sufficient quantity on the foliage. It is simply a question of adjusting to conditions whether one or the other is employed. Both have their advocates and both are exceedingly useful when properly applied -- Indiana; olls News.

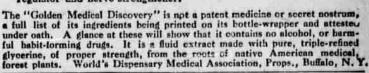

Dairy Notes.

The successful butter makers have tenened that greater care and c'eanliness is necessary in the handling of must and butter during the hot days of the summer. At this time milk i

What Ails You?

Do you feel weak, tired, despondent, have frequent head-aches, coated tongue, bitter or bad taste in morning, "heart-burn," belching of gas, acid risings in throat after eating, stomach gnaw or burn, foul breath, dizzy spells, poor or variable appetite, nausea at times and kindred symptoms?

If you have any considerable number of the above symptoms you are suffering from bilious-ness, torpid liver with indigestion, or dyspepsia. Dr. Pierce's Golden Medical Discovery is mado up of the most valuable medicinal principles known to medical science for the permanent cure of such abnormal conditions. It is a most efficient liver invigorator, stomach tonic, bowel regulator and nerve strengthener.

One of the most striking facts about flying is the case and quickness with which the art seems to be mastered under proper conditions. For ex-ample, Lieutenant Lahm has been a pupil only three weeks, yet he made a flight of 45 minutes, which only a little while ago would have been a record. Half an hour, says Wilbur Wright, is long enough to get the knack of the machine, but it is to be noticed that he does not let pupils quite so green as that shift for them-selves. The first stages seem not to be much more difficult or alarming than the mastery of the high bicycle of 20 years ago, which to the novice looked ea birth as a house in fact the looked as high as a house. In fact, the well taught acronaut seems to lose

Dr. Pierce's Pleasant Pellets first put up 40 years ago. They regulate and invigorate stomach, liver and bowels. Sugar-coated, tiny granules.

For Benefit of Women who Suffer from Female Ills

Minneapolis, Minn.—"I was a great sufferer from female troubles which caused a weakness

rew stronger, and within three months I was a perfectly well woman. "I want this letter made public to show the benefit women may derive from Lydia E. Pinkham's Vegetable Compound."-Mrs. JOHN G. MOLDAN, 2115 Second St., North, Minneapolis, Minn Minn.

Minn. Thousands of unsolicited and genu-ine testimonials like the above prove the efficiency of Lydia E. Pinkham's Vegetable Compound, which is made exclusively from roots and herbs. Women who suffer from those dis-tressing ills peculiar to their sex should not lose sight of these facts or doubt the ability of Lydia E. Pinkham's Vegetable Compound to restore their

Vegetable Compound to restore their health.

If you want special advice write to Mrs. Pinkham, at Lynn, Mass. She will treat your letter asstrictly confidential. For 20 years sho has been helping sick women in this way, free of charge. Don't uesitate - write at once.

Silo Construction.

A Canadian feeder of large experience, has this to say on silo construction in one of our Canadian exchanges: Do not on any consideration build a square or oblong silo. The walls of such a silo are not strong enough to stand the pressure caused by the great weight of the silage; and the amount of silage lost in the corners will amount, in a few years, to a considerable value. The best shape is circular. A silo should be more than twice as high as it is wide. Do not build a silo too large in diameter as the amount of silage spalled from day to day will more than pay the interest on the cost of an extra smaller one. The main qualities of a silo are that the walls shall be strong enough to withstand the pressure and it sha'l be air tight. To get this, the first step is to built a good solid foundation, commenced below the frost line.

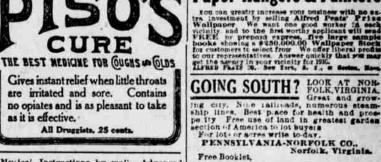

Perhaps the simplest and easiert style of silo to be built is the stave silo. It should be made from two inch narrow plank properly beveled, and held together by strong iron bands. The staves, after bevelling so that when fitted together they will form a circle of the desired size, are placed the most perishable product of the calves out in the hot sun these days farm.

I know a few farmers who turn the calves out in the hot sun these days with the formenting flies. Is it not kinder and more profitable to keep them in a clean, dry, well-ventilate1 box stall during the day and turn them out at night where they can be comfortable?

Raise your own cows, is good advice but we must be sure the calves are worth raising. If it is butter we want the calves must have within them the promise of dairy possibilities. Don't forget as the calf is treated so will the cow be. The calf must be handled properly if we would have a quiet gentle cow. Bad hab'ts come through wrong treatment every time. Cows that are not well supplied with water will fall off in milk. When they are allowed to fall off for any length of time the milk-secreting glands shrink, then no after teeding or care

will bring them back to their full milk flow until they are fresh again. Do not use artificial means to prevent the flies, great swarms of them, from worrying the cows? We have not tried the commercial preparations but we find many of the home applications which are recom mended, do the work well, are cheap and easy to apply. Though they are short-lived we would rather take the little time required to apply them f equently than to have the cows falling off in flesh and milk production from fighting files and hunting something to eat at the same time. There is no comfort for the cows in the pasture at this season unless they can be free from the torments of the fly.

Here is an efficient remedy that dress not need renewing in as short a time as some other we have tried. Try it and see how culckly flies get off when they light on the cow's back and shou'de s: One quart of cld grease or lard, one quart of kerosene, and a blg tables. poonful each of fish oil, carbolia acid and oil of pennyroval. Apply with a snonre, or much better a sprarer made for the murphes -Fanny M. Wood, In the Indiana Farmer.
