TALIZER

RESTORES LOST POWERS. A weak san is like a clock run down. MUNYON'S TITALIZER will wind him up and make the go. If you are nervous, if you are retritable, if you are nervous, if you are retritable, if you are nervous, if you are left, if you do not feel your full many floor, begin on this remedy at once. There are 75 VITALIZER tablets in one bottle yery tablet is full of vital power. Don't pend another dollar on quach doctors or purious remedies, or full your system with armful drugs. Begin on MUNYONS ITALIZER at once, and you will begin feel the vitalizing effect of this remedy firer the first doze. Price, \$1, post-paid, dutton, 63rd and Jefferson, Phila, Pa.

Vehicle Run by a Sail.

The feasibility of sailing easily over the frozen surfaces of rivers and lakes has long been recognized and utilized, and it would now appear as if the wind can render helpful service to some extent in connection with loco-motion over normal roads. A German inventer has perfected and patented a simple sail vehicle which makes fair progress over good roads and across sandy stretches, such as a sea beach. The dominating features in the construction are lightness and effective steering facilities. The present form is a light framework supporting a sad-die and a mast for the sail, and resting upon four wheels, one wheel on either side and one before and one behind. The two latter are of a larger diameter than the former, and all are far apart, as is the practice with automobile wheels. A person sitting on the saddle rests his feet on this transverse axle, and by suitable pressure can alter at once the relation of the wheels to the main axis of the framework. This arrangement furthermore leaves his hands completely free for adjusting the position of the sail or using a brake. The whole device has a certain lightness and elegance which will appeal probably at first to the lover of sport.—Government Consular

SORE EYES CURED.

Eye-Balls and Lids Became Terribly Inflamed — Was Unable to Go About—All Treatments Failed— Cuticura Proved Successful.

Cuticura Proved Successful.

"About two years ago my eyes got in such a condition that I was unable to go about. They were terribly inflamed, both the balls and lids. I tried home remedies without relief. Then I decided to go to our family physician, but he didn't help them. Then I tried two more of our most prominent physicians, but my eyes grew continually worse. At this time a friend of mine advised me to try Cuticura Ointment, and after using it about one week my eyes were considerably improved and in two weeks they were almost well. They have never given me any trouble since and I am now dixty-five years old. I shall never fail to praise Cuticura. G. B. Halsey, Mouth of Wilson, Va., Apr. 4, 1908."

Potter Drug & Chem. Corp., Sole Props. of Cuticura Remedies, Boston, Mass.

Training Girls for Wives.

Mr. J. J. Evans, at a meeting of Cheshire Educational committee at Crewe, called attention to the success which had attended to the success Housewifery or Cottage Home-making center. The work was inaugurated in the autumn of 1907 at Bebington. The girls as far as possible were selected from those about to complete their school career, and the course of training was in all the duties of a housewife, including shopping, preparation of food, food values, digestion, sand tation, care of the sick, care of children, feeding infants, and the right sch girl was thoroughly instructed in every branch of the work. Arrangements were made for the girls to remain to dinner, with the adsooked and served the meal which they themselves ate. By this means allure was remembered and success luly appreciated. The chairman, Alterman Hodgson, said he had visited he Bebington center, and he was de ighted with the work done, and he selleved the board of education would cognice the value of it.-Manchester Wng.) Vegetable Milk

A cheap substitute for the milch cow has been discovered by the Japanese in the form of a tiny bean, states the Farmers' Home Journal. The juice, which is extracted by a special process from the bean, is said get rid of the worst offenders." to be an excellent vegetable milk, the properties of which render it highly suitable for use in tropical countries. The preparation is obtained from the Soja bean, which is a popular article of food among the poorer classes of Chinese and Japanese. In making the vegetable milk the beans are first of all softened by soaking and boiled in water. The resultant liquor is exactly similar to cow's milk in appearance, but is entirely different in its national fattening grain for the nacomposition

For Young Horses,

An experienced breeder has discovered that equal parts of ground oats and corn make an excellent ration for young horses. Others add bran to make a well balanced ration to produce a symmetrical growth of bone, muscle and fat in young horses. The bran is rich in protein and phosphorus, which build up bone and museular development, and being mildly cathartic prevents constipation. Clover hay and alfalfa are excellent roughage for young horses, as they are rich in the elements of bone and muscle Commercial horses now must have heavy bone as a foundation of stable endurance, and breeders should develop their young horses on those rations which will promote the growth of bone, the elements of which are contained in oats, bran, alfalfa and clover .- Indiana Farmer.

Restraining a Horse.

An old horseman gave me his way of restraining a fractious horse which answers the purpose in good shape. It is a strap from the foreleg a little above the knee to the halter and fastened with buckles at each end. The

strap is two feet long or about right to hold the head nearly level. The contrivance makes unruly action very difficult and unpleasant for the horse, and he finally learns to behave without its aid .- I. A. L., Middlesex Count ty, Connecticut.

A Shortage in the Pig Crop. The American Swineherd says: "From the general tenor of letters received from breeders in the different parts of the country we are led to believe that the pig crop will be demonstrated a short one. The fact is we ble potash in the soil and make it have been getting into this condition available for plant food. But when ing." priced grain and pork below a com- find them very uncertain and unable fewer sows. As one man said in the work or practical experiments on their office it is very hard to convince a own farms. Properly used lime is farmer, when he can get seventy one of the most valuable aids to succents cash a bushel for his corn at cessful farming, but when used withhis town elevator, that it was not his out fertilizer it will impoverish the duty to cash it in there instead of soil, as shown by the old English pro-

Bays:

mency with which the herds do so will depend on the number of such individual offenders, and the only safe way to avoid the risk of one's milk falling below the limit of three per cent., of butterfat is to find out and

A Talk on Turkeys. Now is the time to feed the early hatched turkeys liberally and have them ready for the Thanksgiving market. It rarely pays to hold them for the holiday market. The Thanksgiving market is nearly always the And turkeys take on fat better now than they will later when cold, snowy weather comes. Corn is the tional birds and the most available feed with most of us. We like to give them all the corn they will eat these days for their evening ration, and oats soaked over night in water for the morning meal. Another thing very essential while feeding turkeys heavily is coarse sharp grit. And plenty of milk to drink is an aid in fattening turkeys. How their bodies plump up after a few weeks of good feeding. It won't do to rush them off to market regardless of flesh. The returns from a lean lot of birds are sure to be discouraging. When well fattened their plumage is smooth and glossy. The experienced buyer can tell by the appearance of the plumage whether they are well fattened or not

In England, I am told, they confine turkeys during the fattening period with good results. We have tried shutting them up while fattening with poor success. They are such liberty loving birds, in our experience, it won't do to confine them very long

at any time in their lives, Don't you think it will pay to keep enough turkey hens so you will have eggs to spare your friends and neigh-They will willingly pay you a good price. I have a neighbor who keeps a dozen turkey hens and she sells all the eggs to her neighbors at \$1 a setting. She considers this the surest way of getting money out of turkeys. One nice thing about selling turkey eggs for hatching is that it is no trouble to sell them near home. This lady I have been telling you about gets orders for her eggs over the 'phone, and they are all spoken for long before the laying season. One dollar for eleven eggs doesn't seem like a very big price, but it amounts to a neat little sum at the end of the season, and this party is at no expense to sell her eggs. Wkether we sell the eggs or set them ourselves we should be careful in selecting is quite clear." breeding birds and holding onto them.

Selling off older hens we know to be good layers and breeders and keeping young ones for breeding is a mis take. Up to their fifth year turkeys are profitable as breeders. And they are not fully mature until two years old, and at three years a hen is at her best.-Fannie M. Wood, in the Indiana Farmer.

Potash Required With Lime.

Many farmers have an idea that lime will unlock the stores of insolufor eighteen months or more. High- you ask for their reasons you will parative price of grain caused people to substantiate their opinions either to market their hogs close and to save with the results of experiment station feeding it to hogs or any other ani- verb: "Lime without manure will mals. The shortage is showing in make the farm and the farmer poor."

There is nothing gained by making extravagant claims for the use of years, while the number of consumers lime, and that it makes any of the potash in the soil available is very doubtful and not supported by experiments so far as I can learn. In fact A great many persons have held my experience is that an application would not be the case if the lime made any quantity of potash available. In addition to its effect in "The quality of the milk yielded sweetening the soil, all four mateby a cow depends more upon the indi- rials, life, nitrogen, phosphoric acid viduality of the cow than upon any and potash are necessary for plant other factor, and that a cow is not growth. No one element will answer merely a machine into which one can the purpose without the other, but put a certain amount of food of all are necessary to obtain the best known composition with the sure results. An experiment conducted knowledge that one will get milk of with fertilizers at the Ohio experiequally known composition. A cow ment station shows the increased is a machine certainly, but one whose yield of clover in the hay crop in a roidiosyncrasies, as expressed in the tation of corn, oats, wheat, clover and quality of the milk she produces, can timothy, the lime being applied to only be ascertained by actual testing, the corn crop. Acid phosphate and Hence the need for testing cows for lime gave anincrease of 1847 pounds; the quality as well as the quantity of acid phosphate, potash and lime gave their milk is brought out. By such a an increase of 2521 pounds, a gain of proceeding and by breeding only from 674 pounds for the use of potash with those cows which give milk rich in the lime and phosphoric acid, and fat, the dairy herds of this country this in a soil that the authorities say could undoubtedly be greatly im- is very deficient in phosphoric acid proved, but our methods are altogeth- and lime and supposed to have a fair er too haphazard for such an ideal amount of potash. The weight of ever to be realized. In tme mean-evidence goes to show that the use of time, and so long as a legal limit for potash and lime should go hand in milk of three per cent, of fat exists hand. Still the farmer should not we must be content with showing follow any experiment blindly, but that a large number of individual rather test his soil for himself and cows do undobutedly fall below that find out the properties of lime, phoslimit in the course of every year, phoric acid, nitrogen and potash, while with equal certainty the mixed which will give the best results on his milk of many herds undoubtedly does own farm, and use the results of the so, though with less frequency than experiment stations simply as a guide, that of individuals.
