Hood's Sarsaparilla

Has made itself welcome in the homes of the people the world over, by its wonderful cures of all blood diseases and run-down conditions.

Get it today in usual liquid form or choco-lated tablets known as Sarsatahs.

Prudent.

"So the bride and groom especially equested their friends not to throw

Yes. They asked us to hand the doe over in a package so that it could be used when they go to housekeeping."-Washington Star.

"That Tired Feeling"

Is a condition, not a theory. Far from being a matter of trivial or joking com-ment, it is a condition of real danger. It ment, it is a condition of real danger. It is a never-falling symptom of a state of the blood and nerves that will not cure itself, but, unless prompt measures are taken, will go from bad to worse. Just now, when so many contagious diseases are prevalent, it makes the system especially susceptible to attacks of sickness. To mention "that tired feeling" is to surgest the remedy—Hood's Sursaparilla, unquestionably the most successful blood purifier, nerve tonic, appetizer, and general "apring medicine." It makes people well. A metorboat invented by a Wiscon

sin man, and found practicable, is mounted, catamaran fashion, in two narrow hulls, which are kept filled with air.

Try Murine Eye Remedy For Red, Weak, Weary, Watery Eyes and Granulated Lyelids. It Soothes Eye Pain. Marine Eye Remedy Liquid, 25c and 50c. Murine Eye Savo, 25c and \$1.00.

The habit of viewing things cheer fully, and of thinking about life hope-fully, may be made to grow up in us like any other habit.

The Curfew in London.

Although we do not ring the curfew bell to clear the streets of children, its warning sound can still be heard in one place in London. This is at Lincoln's Inn, where its ringing is a relic of medieval times, when barris-ters and students lived in the Inn and subject to the despotic rule of the benchers in such matters long after there was a legal necessity for "lights out" at 9. Now Lincoln's Inn is deserted in the evening save by watchmen and the police—and per-haps the ghosts of all the parties in Jarndyce and Jarndyce, who may re-visit the scene of their litigation—the old hall which remains as Dickens described it in the wonderful opening chapter of "B'eak House."—London

Hard on Professors, Too.

In discussing the problem of the assistant professor in American univer-sities, in science, Prof. Guido H. Marx of Stanford university, says: "The rapid increase in the cost of living the last 20 years has made the situation acute; for there has been no general increase of salaries commensurate with this, and as a consethese men find themselves driven to a lower and lower standard of living. This is a grave menace to the efficiency of the institutions, both present and future, for it must not forgotten that the highest ranks must be recruited from time to time from men whose development has necessarily been limited by the condi-tions surrounding this rank."

Great Man, Halley.

Edmund Halley was a very great man. He was not only the first to predict correctly the return of a comet, that which is now known by his name, but also-before Newton had announced his results to anyonearrived at the conclusion that the attraction of gravitation probably va-ried inversely as the square of the distance. While these and other important achievements of his are well known, it seems to have been forgot-ten that Halley devised a method of determining the age of the ocean from chemical denudation.-Science.

Farm Topics -----

SOWING ALSIKE CLOVER.

I am thinking of sowing alsike, and would like to know the best time to sow. Should I sow it on the wheat the same as red clover, or would it do to sow it in the corn at last cul-

tivation?-E. T. K. Answer:-Alsike may be seeded with wheat or rye in the same way as red clover. When used for forage the best time for seeding is in the late summer or early fall. About half the quantity of seed to that of red clover is required,-Indiana Farmer.

HOLLAND COWS' PARADISE. The feeding of cows in Holland is done by the farmer, and the feed and water carried in between the cows from the rear. The winter grain consists almost entirely of oil cake fed only to the heavy milkers in quantities of from two to four pounds a day. The principal feed, however, is hay, each cow receiving nearly thirty pounds daily. It takes the great capacity of these cows to handle such a large quantity of roughage, and special care is taken to see that they are always ready for their feed. The cows are given the best of care. They are carefully curried and their tails suspended by a string from the ceiling, so that while the animal has free use of its tail, it can never get into the gutter to be fouled. Scarcely an hour passes, day or night, that the cows are not visited by an attendant. They are watered, fed and milked with the greatest regularity and given

every comfort possible. Caring for the cows, gathering food for them, and the manufacture and sale of the product occupies the attention of the Hollander to a degree difficult to understand unless one has paid them a visit. Holland is often called the cow's paradise, and it well deserves the name. - Farm Magazine.

COWS ON SILAGE YEAR ROUND. In response to an inquiry of a farmer with twenty acres under cultivation, in meadow and pasture, Hoard's Dairyman advises:

It requires from five to six tons of silage to supply a cow a year; in other words, seven cows would require from forty-five to fifty tons. One of the cheapest ways of soiling cows, we think, is by the use of the silo. If the land is in a good state of fertillty, it would require about five acres of corn to make sufficient silage to keep seven cows for a year, and the other fields could be devoted to growing hay and other crops that might seem advisable. It can be generally calculated that it will require about ten pounds of hay per day when cows are fed from thirty to thirty-five pounds of silage. In other words, about two tons of hay per year will carry each cow, or about fourteen tons in all.

Oats and peas could be sown early in the spring, cured for hay and land planted to millet, which would develop a good crop of hay provided the season was favorable and the soil in a reasonably good state of fertility. In time it would be well to have a field of four or five acres of alfalfa, which would furnish better forage for supplementing the silage than either millet or oats and peas. With silage and alfalfa it requires but little grain to produce satisfactory flows of milk. One can reasonably expect a yield of three or four tons of alfalfa per acre per year.

CROWING GOOD HOGS.

The average number in the litters of pigs is about seven, and in spring and fall litters of the same brood sows, each grow an average of twelve pigs, it is claimed. To do this care must be taken to keep the brood sow in the best condition all the season. At current prices for fat hogs this makes the two litters per year worth about \$200 gross when fat for market. This indicates the value of good brood sows, and furthermore, it illustrates the importance of the best care and management for both sow and litters. It is altogether probable that both hogs and corn will command good prices for years to come. and therefore care should be taken to secure well matured and pure bred breeding animals. This class of stock will mature earlier and weigh heavier than common stock, and because of earlier maturity will require less grain to finish them for the market.

In a college farm test the following feed and management of brood sows is given and the results. It is stated that in this test thirteen brood sows, averaging 258 pounds each. were fed a ration of two pounds of corn meal and six pounds of alfalfa hay throughout the winter. At the end of the fifth week, when the sows began to farrow, the average weight was 264 pounds. "These sows kept in fine condition, farrowing during February and March, and saved large litters in every case."

For hog feed hay should be rather fine and consist as largely as possible of leaves. The last cutting of alfalfa is eaten up without waste, but for coarser alfalfa and cowpeas and clover the coarse stems are left. Clover or cowpea hay from which the leaves have been lost is of little value as hog feed, and should not be relied upon. The best method of feeding hay to hogs is in racks set in shallow troughs about four inches deep and twenty-four inches wide, to catch the shattered leaves so the hogs can get them.-Indiana Farmer.

The use of trackless trolleys is rapidly extending in Europe.

Dandelions may be eradicated from the lawn by applying a few drops of

gasoline at the centre of each plant, using an ordinary medicine dropper for the purpose. Another plan, which may also be used in the case of plantains and other weed pests, is to cut off the plant at the crown and apply two or three drops of kerosene to the stump.-Indianapolis News.

Hiblscus syriacus (Althaeafrutex). Rose of Sharen. The large and showy flowers of the Althaea, so freely produced in late summer and at a time when few other shrubs are in blossom, are highly prized and much admired by hosts of planters. And its popularity is well deserved, for few tall shrubs produce such a magnificent display. There are both double and single flowered forms, ranging in colors from pure white to rich shades of rose and purple,-Indianapolis News.

TUBEROSES.

Tuberose bulbs should be lifted and well dried beforesevere frosts come in autumn. Then pack in dry sand or shavings or chaff, and keep in a warm room during winter. An ordinary cellar is too cold and damp. The furnace room will usually be found satisfactory, being warm and dry, which are necessary conditions. Do not plant the bulbs out too early in spring, as the germ of the tuberose is very sensitive, and if injured by cold and moisture the bulb will produce "nothing but leaves."-Park's Floral Magazine.

PLANT BEAUTIFUL VINES.

Why are not beautiful vines more often planted about village or farm homes? You should know how beautiful they are. Have you not seen the beauty of the wild grape trailing over bushes, trees or stumps by the brooks and creeks, or the wild bittersweet, or the Virginia creeper?

You can buy a grape vine for ten cents which will be a thing of beauty for a hundred years and at the same time give you a bountiful supply of delicious, wholesome fruit.

But there are other vines more beautiful than the grape. My favorite is the little white flowering clematis known as Paniculata. This clematis is one of the most easily cared for. It is a mass of white bloom during the long season of midsummer and early fall. It is a vigorous grower and will climb over as large a surface as a grave vine. While each individual flower is not large like Clematis Jackmanni, and others of that class, there are millions of these little flowers, altogether making a mass of white like a snow bank. -Green's Fruit Grower.

TRY NEW VARIETIES.

Very often some novelty of exceptional merit is put on the market by some enterprising seedsman, and the one who does not try it is a distinct loser. Of course it is not wise to plant of novelties to the exclusion of tried sorts, but it is safe to get a little seed of any varity which promises especially well, if the introducer is one known to be "as good as his word."

One must not blame the seedsmen if everything they "boost" does not fulfill the claims made for it. One must take into account both soil and climate, and for that reason it is not wise to place too much reliance on new varieties till they have been thoroughly tried. This is especially true of field seeds, for if they are ill chosen there is a chance for considerable

The best plan is to buy sparingly the first year, and if the new variety does pretty well save the best seed from it, if such a plant as matures seed the first season, and chances are if adapted to the location this homegrown seed will do better the second year, providing the season was favorable. If it does not, there is little use in continuing its growth.

With plants whose seed must be bought each season, it is well to make a more extended trial the second year than the first, providing the first promised well, but never discard your old friends tried and true of field and garden, till you are sure you have something better to take their places.

Would we discourage the trial of new varieties? No; but we would be safe before making a change, and to that end would encourage making experiments, both under the most favorable conditions as to soll and cultivation, and under such varying conditions as most field and garden crops are grown. A comparison of the difference in yield might convey

some needed lessons. These experimental plots, whether of new or old varieties, are mighty interesting and go far towards robbing farm life of the monotony which is inseparable from work of any kind, if the head is not occupied as well as the hands. Try it, friends, and see how much enjoyment can be gotten out of a few square rods of your farm when devoted to this purpose .- D. C. Carman, in the Indiana Farmer.

An uncut diamond looks very much like a bit of the best gum arabic,

Her Scalp Itched Intolerably.

"Just about two years ago, some form of humor appeared on my scalp. The beginning was a slight itching, but it grew steadily worse until, when I combed my hair the scalp became raw and the ends of the comb-teeth would be wet with blood. Most of the time there was an intolerable itching. in a painful, burning way, very much as a bad, raw burn, if deep, will lich and smart when first beginning to heal, Combing my hair was positive torture. My hair was long and tangled terribly because of the blood and scabs. This continued growing worse and over half my hair fell out. I was in despair, really afraid of becoming "Sometimes the pain was so great

that, when partially awake, I would scratch the worst places so that my finger-tips would be bloody. I could not sleep well and, after being asleep a short time, that awful stinging pain would commence and then I would wake up nearly wild with the torture. A neighbor said it must be sait rheum, Having used Cuticura Soap merely as a tollet soap before, I now decided to order a set of the Cuticura Remedies -Cutleura Soap, Ointment and Pills. used them according to directions for perhaps six weeks, then left off. as the disease seemed to be eradicated, but toward spring eighteen months ago, there was a slight return of the scalp humor. I commenced the Cutleura treatment at once, so had very little trouble. On my scalp I used about one-half a cake of Cuticura Soap and half a box of Cuticura Ointment in all. The first time I took six or seven bottles of Cuticura Pills and the last timethree bottles-neither an expensive or tedious treatment, Since then I have had no scalp trouble of any kind. Standing up, with my hair unbound, it comes to my knees, and had it not been for Cuticura I should doubtless be wholly bald.

"This is a voluntary, unsolleited testimonial, and I take pleasure in writing it, hoping my experience may help someone else. Miss Lillian Brown, R. F. D. 1, Liberty, Me., Oct.

Heads Getting Scarce. Mummified heads of South American Indians belonging to a tribe living on the slopes of the Andes, near Quito, in Ecuador, once so easily purchased, are becoming extremely scarce. The head is shrunk by some secret process known only to the natives, being thus reduced from life-size-nine or ten inches from tip of chin to top of head-to five inches. The curious thing is that the head can be reduced in this fashion without destroying the features. These heads some of which are of great antiquity-are now almost impossible to procure. Their sale is forbidden by law, as the large prices they fetched tempted unscrupulous Indians to produce "green" ones.-Wide World Mag-

How Scott Bore Adversity.

Once when I was staying with Mr. Ruskin he took delight in showing me his Scott MSS. He brought down "Woodstock" from the shelf, and turning the leaves over slowly and lovingly, he said: "I think this is the most precious of them all. Scott was writing this book when the news of his ruin came upon him. He was about here, where I have opened it. Do you see the beautifu! handwriting? Now look, as I turn over the pages toward the end. Is the writing one jot less beautiful? Are there more erasures than before? That assuredly shows how a man can and should bear adversity."—London Graphic,

Dr. Pierce's Pleasant Pellets regulate and invigorate stomach, liver and

Lee and Virginia.

The state placed Lee beside Washington because the state today believes that Lee was the greatest Vir-ginian after Washington. Some of our people go even further and think that Lee excelled Washington in generalship and in those noble personal traits which make a man truly great. Virginia believes that Lee should stand above Jefferson, Madison, Mon-roe, Marshall and a host of other men far better than most of those who grace or disgrace the hall of fame, and Virginia believes this not so much for what Lee did, in comparison with the other illustrious sons of this state, the other hustrious sons of this state, but for what he was. Lee, the man, is greater than Jefferson, the man, and Lee the man is greater as a man than Jefferson the statesman was great as a statesman.—Richmond Time-Dispatch.

The Bad Baboon.

Baboons and boars are the most formidable of all foes to the dogs that hunt them—just as leopards are of all wild animals those most apt to prey on dogs. A baboon's teeth and hands are far more formidable weapons than those of any dog, and only a very few wholly exceptional dogs of huge size and great courage and intelligence, can single handed contend with an old male.

But we saw a sett'er whose three hig terriers could themselves kill a ong terriers could themselves kill a full-grown warthog boar; an almost unheard of feat. They backed one another up with equal courage and adroitness, their aim being for two to seize the hind legs; then the third, watching his chance, would get one forely when the hear was smally foreleg, when the boar was speedly thrown, and when weakened, by bites in his stomach.-Theodore Roosevelt in Scribner's.

Allen's Foot-Ease makes new or tight shoes easy. At all Druggists and Shoe stores, 25 cents. Ac-cept no substitute. Sample mailed FREE. Address Allen S. Olmsted, LeRoy, N. Y.

The great Lick telescope will pick out a star so small it would require 30,000 of them put together to be visible to the naked eye.

L. Pierce's Pleasant Pellets cure consti-pation. Constipation is the cause of many diseases. Cure the cause and you cure the disease. Easy to take.

Kaiser's Business Interest.

Those "in the know" are perfectly ware that for many years now the German emperor and various members of his family have been quite exten-sively engaged in trade. The kaiser's personal interest in the products of his pottery factory may be judged from the fact that no article manufactured on a new design may leave the factory without its first having been presented for his majesty's inspec-tion. It is no uncommon thing for the at 6 o'clock in the morning, greeting his employes with a cheery "Good morning, workmen." A chorus of "Good morning, your majesty," is heartly uttered by all in reply. The kaiser then makes his tour of inspec-tion, watching the men at work and checking accounts.-M. A. P.

Miss Alice Paul thinks that Halley's comet has come this time as a herald of the great woman movement, and will presage the obtaining of votes for women. Previous appearances, she says, were coincident with the black plague, the battle of Hastings the beginning of the Reformation, the revolution. Astrologers say that this time it will mark a great crisis in the enlightenment of women.—Topeka Capital.

Jefferson, Iowa. — "When my baby was just two months old I was completely run down and my internal organs were in terrible shape. I began taking Lydia E. Pinkham's Vegetable Compound, and mother wrote and mother wrote and that white bears vanished from the ble Compound, and ice, since it has always been it that white bears vanished from the told you just how I alps three centuries ago. But it has was. I began to gain at once and now I could only have taken place a few days previously to discovery,
