PATTON PUBLISHING CO., Proprietors.
THURSDAY, SEPTEMBER 20, 1904.

NEWSPAPER LAW DECISIONS.

1. Subscribers who do not give express notice to the contrary are considered as wishing to renew their subscriptions.
2. If subscribers order the discontinuance of their periodicals, the publisher may continue to send them until all arrearages are paid.
3. If subscribers neglect or refuse to take their periodicals from the postoffice to which they are directed, they are responsible until they have notified their bills and ordered them discontinued.
4. If subscribers move to other places without informing the publishers, and the papers are sent to the former address, they are held responsible.
5. The Courts have decided that refusing to take periodicals from the postoffice to which they are directed, is prima facie evidence of intentional fraud.
6. If subscribers pay in advance they are bound to give notice at the end of the time if they do not wish to continue taking it; otherwise the publishers are authorized to send it and the subscriber will be responsible until an express notice, with payment of all arrearages, is sent to the publisher.

JOHN WRIGHT, Sec.
Right You Are.

The Ebensburg Freeman of last week say that the newspapers have begun the annual scare about the use of water, and according to some it would be a safe precaution to carry a tea kettle, so as to be able to start a fire and boil the water before taking a drink. The effect seems to be to make the use of water unpopular, except when boiled into a thoroughly disagreeable condition. It is doubtful whether three-fourths of the advisers of such a course ever drink water when they could get beer. There may be something in the theory of the improved healthfulness of water when boiled, but the scare given to people by making them afraid of a glass of water, or a green apple, or a watermelon, is liable to do more injury to their nervous system than can be done by eating and drinking everything that comes along, like our ancestors did. It is not safe to say that drinking bacteria cooked, with a constant fear and trembling lest some might not be well done, is anything healthier than eating them raw, in ignorance of their existence or confidence in their digestibility. A good many healthy people are made sick through fear of getting sick.
