Ether and Matter.

The densest matter is more or less porous. Gold will absorb mercury as a lump of sugar will absorb water, showing there must be interstices or interatomic spaces in it, but the ether shows no such property. If a drop of water could be magnified sufficientone would ultimately see the different atoms of hydrogen and oxygen that constitute the molecules of water. If a small volume of ether could be magnified the indications that the ultimate part would look are that the ultimate part would look like the first, which is the same as saying that it is not made up of dis crete particles, but fills space com-pletely. This is expressed by saying that the ether is a continuous me-dium and is hence incomparable with

A Story of Alexander Dumas.

This story is told of Alexander Dumas: It is well known that he could not refuse a request-at least not often. One day he gave a man a letter to one of his intimate friends in Brussels. The friend, a wealthy merchant, received him as though he had been Dumas' own brother, introduced him to his circle of acquaint ances, placed his stable at the man's disposal and did everything in his power to make life pleasant for Du-mas' friend. After the lapse of mas' friend. After the lapse of fourteen days the man suddenly disappeared and with him the best horse in the merchant's stable. Six month merchant visited Dumas and thanked him for the kind of people he recommended to his consideration "Dear friend," he added, "your friend is a shark. He stole the best horse is a shark in my stable." Astonished, Dumas raised his hands toward heaven and cried. "What, he stole from you too!"

To Cure Halter Pulling. Buckle or tie a long halter strap around the horse's foreleg just above the knee, pass the strap through one ring of the bridle and tie the other end to hitching post. After a time they may with safety be hitched in the ordinary way.

Weak Bone.

One of the common troubles in hog aising in the corn belt is that of breaking down. Weak legs are due to improper feeding. The pigs will do pretty well while with the sow provided they do not get too much corn, and they will develop very well on good pasture, but when confined to a corn diet they can't develop good, strong bone. Milk and grass contain bone making material, but corn does not. Bone meal, soft coal, wood ashes alfalfa hay or grasses, and such feeds as contain plenty of bone building elements, will balance the corn diet. Go easy on corn except when putting on the finishing touches of market hogs. Just because it is an easy feed to throw out does not make it a proper feed.

Turn your hogs and pigs out on a good pasture and keep them on grass till fall. Don't feed swill. They will spend too much time squealing at the gate. Give them good water.

Those hogs will look large boned and gaunt all summer. You may be ashamed to show them to anybody, but stick to grass and water. In the fall, when corn is fit, feed it; or, better still, start them on old corn gradually and then watch these slab sided porkers fill in the chinks. they will do it so rapidly and so cheaply you will be surprised. There's no sense in feeding corn all summer-if you have pasture.

For Barb Wire Cuts.

When a horse has been injured on wire the first thing to do is to stop the flow of blood; this may as a rule be done by bandaging it up tight. It may also frequently be best to apply pow dered alum or common saleratus, both of which will generally be found effective. In a few hours considerable swelling will set in; this should be reduced either by applying cold water frequently or, what is really better, apply pure kerosene oil not only to the wound but also to the swollen parts. No bandage should be kept on where kerosene is used as it will then cause the hair to fall off temporarily and as soon as it is safe to do so, the sore should be carefully washed with soft water and castile soap. This ought to be repeated daily until the sore heals. One of the best healing medicines for horseflesh that I have ever used can be put up at any drug store, as follows: One-half pint of alcohol; one-half pint spirits of turpentine; one ounce of pure glycerine; mix all together in a large bottle and shake well before using. Apply only

with a feather at morning and night. The sore should never be bandaged. By daily washing it will in this way heal up very rapidly. I can person-ally testify to the effectiveness of this will furnish a theme for talks in reading clubs this winter. The Brit-ish Ambassador's brother, Sir Edward Durand, who returned recently from results where every other remedy we China, has presented a few specimens tried failed to heal up the sore on the

diminish rapidly and she will sim-ply become a beef cow, or a cow that either will not come in heat, or if she does will not get in calf. As you are milking her right along you have little to fear from milk fever (partuient apoplexy).—C. D. Smead, V. S., replying to above. letter in Tribune Farmer.

Care of Stock.

According to the winter care given them will the pigs, colts and calves be worth the raising or not. According to the care received will they be worth much or little in the spring. How often we see runty, stunted calves and colts starving out the first and best years of their lives in a barnlot or barren pasture! Some are sure to die before spring and those that live through the winter will not be worth half what they should have been; and no amount of care and feed can ever make up to them for these first starved years. If your colts and calves are round and plump in the fall it will cost you far less to winter them through and they will be onefourth larger and much more valuable in the spring than if you let them begin the winter thin in flesh and with coats that stand the wrong way. If the colt, calf, pig or lamb is worth rais ing at all, it is worth raising well. Some people have the mistaken notion that even if farm animals are stunted the first year or two, they will likely frome out and make a fair sized animal in time." Young stock should be thrifty; they should be kept growing. Care should be taken that their growth is never checked at any time. To do this they should have plenty of feed. of the proper kind and of the right amount. Give them sufficient for their needs but not enough to be left over and wasted, and see that each animal gets the feed intended for it. They should be fed and yarded by themselves where you can give them a little extra care and supervision. Clean up the lots and put things in order. It not too late to attend to these things, go out now and see what needs doing most. See about shelter, bedding, mangers, racks and feed boxes. Don't forget the wind breaks. Few forms have a wind break of any sort and poor neglected stock stands shive ering in the wind on almost every farm; not only cold, but hungry as well.-Epitomist.

Crop Rotation.

The State Experiment Station, lo cated at the University of Illinois, is conducting a series of investigations in regard to the comparative value of different crop rotations. Three different systems are being investigated. First, the continuous cropping with corn; second, a two-year rotation with corn and oats; and, third, a three-year rotation with corn, oats and clover. The results of the experiments show that the largest crop of corn can be raised in the three-year rotation, and that when limestone and steamed bonemeal are applied, the yield is greatly increased.

Where these systems have been followed for a number of years the latest vields obtained (1904) were 40 bushels per acre with the continuous corn system: 49 bushels of corn after oats in the two-year rotation, and 75 bushels or corn after clover in the three-year

Deadly Trades are prone "Tobacco workers deadly nervous diseases. never yet seen a tobacco I have worke who is not a nervous crank; who is not off in his head," complained the owner of a large Bowery cigar fac-tory. "I don't know why it is; I used to be a worker myself, and I have never recovered from the ef-fects of the trade. Half the time my men are away sick or dying, they are always ill-tempered and flighty, and a public agitation makes idiots of them. I don't know the reason, as I said." He was advised to physician and find out. The forman in a stone-cutting yard, when questioned, was better informed as to the evils of his trade better

"See those dust clouds all over the yard," he said. "Consumption there! and quick, at that."—Technical and quick, at World Magazine.

Epitome of Whole World.

With the United States sending ma-caroni wheat to Europe, and wines to France, the proverb about sending coals to Newcastle seesm to be practi-cally realized. It is not surprising, however, that this country thus com petes, in various markets of the world, in products hitherto confined to exclusive and remote localities, for the extent and variety of the American domain are such as make it a prac-tical epitome of the whole world. There is scarcely a soil or a climate, apart from arctic and tropic extremes, that is not found here—hot or cold, wet or dry, constant or variable,-New York Tribune.

The Language of Monkeys.

Prof. Garner is not the first man to study the speech of the monkeys. This honor belongs to Sir Richard Burton, the famous Orientalist and the translator of the "Thousand Nights and a Night."

Lady Burton tells in her biography of her distinguished husband that Sir Richard believed firmly in monkey speech, that he had forty apes con-tinually with him for several years

and that he had written down a monkey vocabulary of sixty words This vocabulary, unfortunately was lost. Prof. Garner can make a strange monkey drink by saying a certain word, and with another word he can make it eat, and with another like he can frighten it, etc. But Sir Rich ard Burton could do all these things too. His vocabulary, furthermore, was larger than Mr. Garner's. Ern-est Haeckel, the great German scien-

tist, is in hearty sympathy with th study of the monkey language. says he believes firmly that such He language, exists .- Philadelphia Bulle

The New Drydock in the Orient.

tin.

What will probably be the largest drydock in the Orient for severa years has just been completed at Na gasaki. It can accommodate such monsters as the Minnesota and the such Dakota, having a length of 722 feet and a depth of water on the sill at high tide amounting to 34 feet. Its high tide amounting to 34 reet. At chief patrons, no doubt, will be the Japanese, who will now be encour-aged to build bigger vessels than they possess at present. The floating drydock which has to be towed from th United States to Manila is considerably less capacious, though able to handle any warship already in the service or likely to be constructed within the next decade.

Gossip is a humming bird with eagle wings and a voice like a fog-horn. It can be heard from Dan to Beersheba, and has caused more trou-ble than all the ticks, fleas, mosqui-ble than all the ticks, fleas, mosquigrasshoppers, chinch toes, coyotes, grasshoppers, chinch bugs, rattlesnakes, sharks, sore toes cyclones, earthquakes, blizzards, small-pox, yellow fever, gout and indigestion pox, yenow lever, gout and indigestion that this great United States has known or will know when the universe shuts up shop and begins the final in-voice. MALARIA 222 Generally That is Not the Trouble,

Persons with a susceptibility to malarial influences should beware of coffee, which has a tendency to load up the liver with bile.

A lady writes from Denver that she suffered for years from chills and fever which at last she learned were mainly produced by the coffee she drank.

"I was also grievously afflicted with daches and indigestion." she says, which I became satisfied were like wise largely due to the coffee I drank. Six months ago I quit its use alto gether and began to drink Postum Food Coffee, with the gratifying re-sult that my headaches have disappeared, my digestion has been restored and I have not had a recurrence of chills and fever for more than three months. I have no doubt, that it was Postum that brought me this relief, for have used no medicine while this improvement has been going on." (It vas really relief from congestion of the liver caused by coffee.)

daughter has been as great a coffee drinker as I, and for years was afflicted with terrible sick headaches, which often lasted for a week at a time. She is a brain worker and excessive application together with the headaches began to affect her memory most seriously.' She found no help in medicines and the doctor frankly advised her to quit coffee and use Postum.

"For more than four months she has not had a headache-her mental faculties have grown more active and vigor ous and her memory has been restored. "No more tea, coffee or drugs for us. so long as we can get Postum." Name given by Postum Co., Battle Creek.

There's a reason. Read the little book "The Road to Wellville" in pkgs.

Fat and a Persistent Milker.

W. K. S., North Bennington, Vt.: I am sixty years old and have dealt in horses all the days of my life. want you to tell me just how to feed and take care of a three and a half year old cow; I know little about cows,

and I raised this one for the fun of seeing it grow up. The sire is a Durham, the mother a Devon. She

a good sized red cow, always fat. She came in last year on September 10, and had no trouble; she gave lots of milk. I tried to dry her off six weeks ago, as she is coming fresh oon, but I could not entirely. She commenced making bag about Sepember 16. Now she has got quite a bag full. She has got a poor pasture. She has had all summer two quarts

of bran, wheat and corn twice a day until September 1. Then I stopped. Now I give her a pumpkin at night and one quart of coarse bran, a pint of ground oais and a gill of oilmeal very wet in the morning. I thought this would keep her bowels in better shape. She is fat. The front quarters of her bag are full; the hind ones not so full. I am keeping her in the barn nights. If you will let me know what to do when she comes in and after I will be very much obliged.

I have carefully looked over your

letter and manner of feeding and care of this cow and I have no better advice to give you than to keep on as you are doing. This cow for her breeding is a remarkable milk producing cow. If you have any trouble with her it will be, I/ think, with her going back in milk flow after she alves.

As she has been milking up so near to calving I would not advise you now to try to dry her up, but continue to milk her right along. After the calf is borz, slowly increase her feed, but let it be largely wheat middlings and wheat bran, with some oats added. Corn in a cow with an inherent tenlency to lay on flesh is not called for Should she go beyond a certain limit in laying on flesh her milk flow will On other fields, on the same kind of

soil, where these three systems have been followed for twenty-eight years, the largest corn yields were 22 bushels per acre where corn has heen grown continuously, 36 bushels of corn after oats in the two-year rota tion; and 59 bushels of corn after clover in the three-year rotation.

The yields of the fields thus cropped for twenty-eight years have fallen be-low the yields of the fields cropped for only ten years, as follows: Eighteen bushels decrease (40 to 25) where corn is grown continuously; 13 bushels decrease (49 to 36) where corn follows oats in the two-year rotation; and 16 bushels (75 to 50) where corn follows clover in the three year rotation.

Where ground limestone and steam ed bonemeal are being applied in the three year rotation, the yield for 1904 being 96 bushels of corn per acre.

To see one field of corn which yields only 22 bushels and another which yields 96, growing side by side, on the ame kind of soil, and from the same kind of seed, and both receiving the same kind of cultivation is an object lesson not soon to be forgotten.

Its Season Never Ends.

"The hardest thing to get in a country hotel," said the traveling ban, "is decent fruit. Meat and vegetables are generally pretty good, but at the best hotels in the small towns it is prac tically impossible to get good melons, peaches or grapes.

'The other morning I was in the leading hotel of a flourishing up-state town. The breakfast bill of fare read as usual, 'fruit in season.' The season of canteloupes and other good things was at its height, but what do you suppose they had? Prunes! Oh, the perennial prune-always in season, and the crop is never a failure." -New York Press.
