A Drama of Intense Human In-
terest. All Star Cast.

4 BIG ATTRACTIONS 4

THE PATTON COURIER

Telephone exchange at Rio de Janeiro, Brazil. This is one of the best equipped telephone central offices in South America and is modeled after the telephone system in use in the United States.

ANOTHER LIFE SAVED BY TELEPHONE MAN

Renders Valuable First Aid
Treatment to Victim of
Street Accident.

Myron Riddle, of Bethlehem, employed by The Bell Telephone Company of Pennsylvania, through his knowledge of First Aid and his quick action was undoubtedly responsible for the saving of John A. Forbin's life in a recent accident.

Myron Riddle.

Riddle had just located a trolley car on the street when he looked to see what he could do for the accident he saw crashing into the front wheels of the car. He immediately went to his assistance. The injured man had been struck by the car and suffered the amputation of one leg and mangled of the other. Riddle found the point of pressure at the pit of the injured leg and held it firmly until the arrival of Doctor Heller, who had been summoned to the scene of the accident.

After the accident Dr. Heller stated that the telephone man had rendered most valuable assistance to him in his treatment of the case.

"Before my arrival," stated Dr. Heller, "he had located the femoral artery and made pressure over it and controlled the bleeding. This was most advantageous to the patient as thereby he prevented a large loss of blood, which made it possible to operate on the patient on his admission to the hospital."

Sergeant Tully, Enlistment Officer, Claims the Corps is Good For Young Men

"The Marine Corps is one of the finest places in the world for an ambitious young man," Sergeant Tully, in charge of Marine recruiting at Johnstown, said. "It not only provides him with a chance to serve his country, but it also gives him an opportunity to learn a useful and beneficial trade while he is seeing the world at the same time."

"The pay of a Marine," continued Sergeant Tully, "ranges from \$21 to \$157.50, according to rank and the length of service. At the same time, a Marine is detailed as a specialist to perform duty as a chauffeur, carpenter, plumber, clerk, or other form of work assigned to specialists, he is given extra pay at a special rate."

"Clothing in the Marine Corps is provided for by a \$116.80 clothing allowance during his first year, and \$47.45 during each succeeding year. If a man is careful with his clothing, and does not draw the entire allotment, at the end of his enlistment he may obtain this in cash."

"The food," Sergeant Tully said, "is excellent. The quantity is sufficient and there can be no complaint as to quality and variety. This together with post exchanges for buying candy, cigarettes and the like, takes care of the appetites of the Marine."

"The Marine Corps orders provide for the promotion of non-commissioned officers of necessary ability and initiative between the ages of 21 and 27 years to commissioned rank. There are now in the corps over 500 officers from Second Lieutenant up to and including the rank of Colonel who have been so promoted. The enlistment period is three or four years, but the rules regulating this are stringent. Physical qualities enter in, and a man must be in good health to gain entrance to the Marine Corps."

If you turn the burner on an oil stove so high that you can't turn it down again, throw a handful of salt on the blaze and it will immediately go out.

Altoona Post Invites All Veterans To Meet There July 21

Altoona post, American Legion, invites members of the Fox Pease post, as well as members of all Cambria county posts, their relatives and friends, to attend the American Legion rally and outing to be held at Lakemont park, Saturday, July 21. Thousands of veterans of the world war are expected to make Lakemont park their objective that day. Veterans of all surrounding counties are invited to attend.

The program will start at 9:30 a. m. and continue till midnight. The program includes ball games, athletic contests and water sports. William B. Healy, department commander of the American Legion, and two department past commanders, Col. Joseph H. Thompson and Lieut. Gov. David J. Davis, will deliver addresses. The event will be in the form of a basket picnic and all world war veterans of this vicinity are invited to Lakemont park as the guests of the Altoona post.

55 Billion Kilowatt Hours to Satisfy.

The remarkable fact that the electrical industry of the United States will consume this year approximately 55,000,000,000 kilowatt hours of current, 21,500,000,000 kilowatt hours of gas in its steam plants was made public a few days ago by the Research Department of the National Electric Light Association. This represents an increase of practically 15 per cent over the fuel requirements of this industry for 1922.

It is estimated by the Association that this huge quantity of the Nation's fuel will generate 22,500,000,000 kilowatt hours of current. To which, to obtain the aggregate generated during the year, must be added 21,000,000,000 kilowatt hours developed at the water-falls and dams of the country.

Thus in America, where a score of years ago the candle, kerosene and gas flame were the common illuminants and steam was depended upon to turn practically all the wheels of industry, an amazing annual demand for electric power has been built up, which, in 1923, will require approximately 55,000,000,000 kilowatt hours of electricity to satisfy. This great current will be serving to light some 11,000,000 homes, 3,400,000 shops and stores, and to furnish commercial power to approximately 5,200,000 consumers.

At the end of 1922 the amount of capital invested in the electrical industry was substantially \$5,100,000,000. Having its forecast on hydro-electric and steam projects now under construction, and planned for this year, the Association predicts that by the close of the current year over \$6,000,000,000 will be serving the public in the guise of electric utility and convenience equipment and service.

Falling Rocks Kill Man—

WINDBER—Laught under a fall of rock at Mt. No. 32 of the Berwind-White Coal Company, Joseph Bach, 36 years old, of this place, was fatally injured. He expired several hours later in the Windber hospital.

Ton of Pork Per Litter in 6 Months.

A ton of pork from a single litter of pigs at six months of age!

This might sound like a big proposition at first, but it has been done and can be done. Swine breeders all over Pennsylvania are asking about this new phase of State College extension activity, and a large number have set out to show that the "ton litter at six months" will work wonders for the state swine industry.

It must be admitted that the county and community swine breeders have hit upon a rather accurate measuring stick for their business. They have come to realize that one of the principal factors in the success of swine raising is the volume of pork produced per brood sow unit. They have set a minimum of 2000 pounds per litter and it is expected that very soon it will be quite common to see across angle litters topping the scales at one ton only six months after coming into the world.

It is nothing especially new for a litter to weigh a ton at six months, for last year T. M. Strong, an Indiana county farmer, raised a litter that dressed 210 pounds in live weight. It is to be considered in the "Ton Litter Project" that is now sweeping the state, fostered by Swine Breeders' Associations. It is a part of their improvement program directed by the animal husbandry extension specialists under Dr. H. H. Haver at State College, in conjunction with county agents. Counties which have "Ton Litter Projects" now under way include Beaver, Indiana, Columbus, Northumberland and Lancaster.

Farm Calendar.

Farmers' Day will be celebrated at the State College school of agriculture and experiment station on Thursday, July 14th. The program will open on the preceding evening and a score of demonstrations have been scheduled for the one big day. See the county agent about the program.

Patton Auto Co. Inc.
PATTON PA.

state plant disease specialists from State College found apple scab developing at an alarming rate in Lancaster, Chester, Franklin, Cumberland, Dauphin, Lehigh, Snyder, Union and other counties. Continued rains will make conditions as serious to apples as late blight is to potatoes. Spraying should be continued at ten day intervals.

Pigs—Do not crowd the growing pigs into cramped quarters or keep them in too large droves. The smaller pigs are certain to suffer where such is the case. Avoid this by keeping the drove well graded and in smaller groups.

Thinning Fruit—There is an outlook for a heavy yield of fruit this year. One way to insure having fruit worth marketing is by thorough and systematic thinning. On peaches thin just after the shucks are cast off, and on apples, just after the June drop.

Cream Production—If you will adjust the cream screw on your separator so as to have the cream test 30 to 35 per cent fat (practically all of the fat will be removed from the milk) it will give a better grade of cream and leave more skim milk for feeding young stock.

Mites—Red mites cause pellets to lose weight and become stunted. Clean them out by painting the perches with some coal-tar preparation.

Household Notes

The burned-out battery in your flashlight will be as good as new if you take out the individual cells, heat them very hot on the stove, and put them back in the flashlight while hot.

A few chopped nut meats added to current jelly or preserves makes a delicious sandwich filling.

A wire egg beater is very effective in producing soups when you use soap flakes of any kind.

Cross-cloth is best for cleaning polished surfaces. Linen streaks them and leaves deposits of lint.

Paste a narrow strip of old velvet along each rocker if a chair is of the "traveling" variety.

Much illness and weakness of one's later life is said to come from improper nourishment in youth.

To prevent the generally disliked odor of cabbage when cooking, add a piece of charcoal to the water.

The life of your broom will be lengthened if you dip it into hot soapy water about twice a week.

The "bleef tree" of Jamaica grows and thrives for months after being uprooted and exposed to the sun. Although the brain is perpetually
