Men have long contended that they are groping in the dark; this is one The light of thousands of years

really illuminates their way. The great truth is that men are not well behaved, and that those who behave best get along with most comfort and ease.

In every phase of life, from feeding to learning, from manners to money, here is the sermon preached by deity, bishop and layman; it is a fact so universally known that, before engaging in stealing, a thief preaches

To prosper as well as we may, to complete our lives as comfortably and easily as possible, it is only necessary for man to accept his own preaching.

A book recently sent me contains a picture of a grinning skull, and un- those whom she is leaving, as is comder it the words: "What's the use?" A foolish picture and question. If a to stay longer. A host can scarcely bear takes after you, why run? If you break a leg, why have it set? The What's the Use philosophy is self, but she's about talked out, and, only dismal and foolish. We are here, anyway, it's better when making a and should take as good care of our- visit to leave behind a little grief than selves as is possible as long as is a lot of relief.

Years ago there was general indignation because a certain Doctor Osler said all human beings were old vited to spend the week with us. at forty, and should be chloroformed We were living on a farm, there was to get them out of the way of those still able to carry on. A very ridiculous statement, of course; many are useful at forty and far beyond. But it would have been sensible had in arms. They entailed a good deal Doctor Osler suggested that certain worthless people be selected, and chloroformed at any age. The shift-less and idle, the criminal, the hope-two into four, and the four into six, lessly foolish who do nothing but make trouble for those more worthy. our guests were contemplating kissing

Dr. Oliver Wendell Holmes once wrote a health rule that has been quoted so often I may be condemned for printing it again. It is to get an incurable disease, take care of yourself, and live forever. It was his way of emphasizing the important fact that wonders may be accomplished, easily and pleasantly, by "taking care of

I never pay much attention to what a poet says. I do not know what he is talking about; and I have heard of pretty much everything of real importance in the world.

Many a woman who needs only a short fast, and more suitable food thereafter, is easily persuaded that a surgical operation will cure her. Most of the poor men I know complain of debts they owe doctors for opera-

One often hears of the great fight being made by Capital, and the inference is usually given that Capital is fighting for robbery, spoils.

The truth is, the great fight of Capital is for the sacredness of obligation, for industry. Capital is a thing that cannot prosper in a country where there is only rioting and idle

Capital is not heard of among savages; it is an instrument of civilized

A surgeon lately told me a woman called on him and wanted her gall bladder removed. He asked her where she got the notion. She replied that a neighbor woman told her that she had heard of a woman who did not feel well, had her gall bladder removed, and thereafter enjoyed health. "No one appreciates," said the surgeon, "how many operations we refuse to perform."

There are so many indiscreet memoirs in print of late that many are inquiring: "Shall they be suppressed?" And just as you are thinking of writing yours!

* * * Men and women do not get along well. The quarrel is mainly about money. A woman never seems to care much because her husband isn't as much of a lover as when they were first engaged. She doesn't expect it; and realizes she has cooled off, too. We have learned that these things are natural, but men are still shocked at the extravagance of women, and wom-en are still shocked at the stinginess of men. Is there any way of coming to a better understanding on this subject of money? * * *

I like five-thousand-a-year men Nearly all of them are in line for promotion to ten-thousand-a-year jobs. And when they reach that goal they may reasonably hope for twenty thou sand, fifty thousand a year. Nearly every five-thousand-dollar-a-year man is a comer, and has ability and character. Among the thousand-dollar-ayear men, one finds many who are not worth the pay they are getting, but the five-thousand-dollar men are worth more, and will get it. A twenty-dollar-a-week man finds it difficult to get a job, but there is clamor among employers for the five-thousand-dollar men.

* * * There is only one reason men like women, although the women believe there are several hundred.

Woman Chief of Seminoles

Wewoka, Okla.-Mrs. Alice Davis, first woman chief of an Indian tribe, now in the seventy-five-year-old "guide, philosopher and friend" of 3,100 Seminole tribesmen, whom she ruled for two brief periods in 1922. She frequently appears in the Discrict court here as an interpreter in litigation involving the oil lands of

he Seminoles. Her father, John F. Brown, a Scotch physician and graduate of the University of Edinburgh, had come to the United States as a surgeon during the Civil war. At that time he married Lucy Red Beard, a Seminole.

A son became chief of the tribe and won the title of "Governor" Brown. After the latter's death, his sister Alice was appointed by President Harding to serve as chief for one day

order to sign authoritatively a deed in behalf of the Seminole ration. The deed called for the transfer of Emahaka mission to a private individual.

A school for Seminole girls, the

MY DEAR

NEVER SEE

mission had been condemned and abandoned and the federal government wished to dispose of it. Mrs. Davis refused to sign the deed. She contended that the land had been sold without the consent of the tribe and that the Indians received no part of the purchase price. For her refusal she was immediately "separated" from her position as chief of the tribe

Her retirement to private life by no means tessened her activities. Sh keeps a record of births, deaths and marriages among her people and is always prepared to supply informa

When Children Complain

Children are naturally happy and playful and when they complain of headache or dizziness, are cross and feverish, restless at night, have bad dreams and no "pep" for play, it is a sure sign of an upset stomach that can be quickly remedied if you give them

MOTHER GRAY'S SWEET POWDERS MOTHER GRAY'S SWEET POWDERS.
They act quickly and gently on the bowels, relieve constipation, cleanse the stomach and sweeten the teverish breath.
They break up colds and act as a tonic to the whole system. Children like to take them. This safe and pleasant remedy has been used by mothers for over 30 years. Mother Gray's Sweet Powders are sold by all druggists; accept no substitute.

If only all guests would learn when in order to complete business which tion to a fellow Seminole the wishes her brother had left unfinished, A Was Giant Tusker

Henry Fairfield Osborn, famous paleontologist of New York, says it's a real discovery and that nothing like it has ever been found before.

The new elephant is built along the ines of a steam shovel. Its great tusks extend straight out in front and the ends are shaped just like a shovel. These tusks extend from the lower jaw and from the joint they measure seven feet. The length of the lower jawbones of the largest mammoth ele-phants heretofore known is less than

Dr. E. H. Barbour, head of the pa eontological department of the University of Nebraska, and curator of the university museum, says the animal walked the earth some 1,000,000 or 2,000,000 years ago.

Dug Up in Nebraska.

This particular type of elephant, which has been named "Amedelodon Fricki," used to roam the Nebraska plains. The individual skeleton has just been found in Frontier county this state, and is now in the museum of the University of Nebraska. Only the lower jaw, the huge tusks, tremendous teeth, still in place in the jawfound, but the expedition from the University of Nebraska is now searching Frontier county for other traces of the big fellow who carried a spade like a steam shovel out in front of him as he walked.

The ends of the two tusks are set very close together, making practically a broad, straight continuous line across the end where the "spade" comes in contact with the earth. The huge molars measure nine inches long and are still firmly set in the jawbone. These molars are in perfect ondition, and the tusks have the density and other marks of true ivory The specimen is perfect. It will be mounted in the Nebraska university "hall of the elephants," which scientists say is the greatest collection of prehistoric elephants, mammoths and mastodons in all the world. Practically all the specimens in this collect

DORIS - YOU COME AN'

COAL'N WOOD IN RIGHT

MARCH

were discovered in Nebraska.

The gigantic combination of steam shovel and animal just discovered tilled the Nebraska prairies and turned the sod over with as perfect an ivory shovel and plow as can be imagaed. In the days that the big fellow roamed the earth Nebraska was either the shores of an ocean or was a great inland sea. The "steam shovel" was used to turn the sod, dig up food such as seaweed from beneath the waters, or for excavating in mud or loose earth and sand in its search for food.

Mystery About Tusks.

The end of the jawbone proper into which the heavy tusks are set is a comparatively light bone, seemnot nearly strong enough to stand the heavy strain which might be supposed to have been exerted in the heavy digging of which the shovel tusks would be capable. This peculiarity makes something of a mystery out of the use of the tusks. Doctor Barbour hazards the guess that as the great mammoth dug, he wrapped his trunk around the "shovel" in the heaviest part and that this took most of the strain off the jawbone.

"The shovel-mastodon," says Doc-"must have carried his head high in order that the protruding mandible could clear the ground when it walked, and not interfere with progression. Fortunately our specimen is perfect. The tusks have the whiteness and the density, as well as the decussating lines of ivory. The bones are white and firm and the moars almost unblemished."

The shovel-tusks extend from the ower jawbones in this elephant, while in other elephants the tusks extend from the upper jaw. Doctor Barbour makes a guess that the upper tusks
