Hard to Get Correct Figures on Longevity

Many and widespread are the dis parities in the longevity of animals birds and fishes. Scientists are unable to say why some species live many times as long as others. They have no explanation, for instance, of the fact that a tiger, a lion or a hippopotamus will die of old age long be-fore an elephant has reached his

An elephant might live to be two hundred years old. A tiger is old at twenty years, a lion at twenty-five years, a hippopotamus at forty years and a bear at fifty years. A swan can survive for one hundred years and an eider duck or a parrot for more than two hundred years. A tortoise might live to be three hundred years old. Insects usually have short lives, but some ants have lived in captivity for fifteen years. Queen bees live from four to five years, but the bee work-ers succumb in six weeks. Carp and pike sometimes live to be one hundred and fifty years of age. Diseases, adverse weather, lack of

food and enemies affect nearly all forms of wild life, so that few animals die of old age, and the scientist experiences difficulty in assembling data as to the natural span of their lives.

Take Horrible Risk

in Pursuit of Sport Savages are as fond of sport as are civilized peoples, but many of their games appear to be unduly risky. One such game is "clam baiting," played on the Coral sea. The procedure is for a man to swim directly over a giant clam-which may weigh several hundred pounds-as it lies wide open on the bottom, waiting to entrap fish and other food, and drop a stone into it. This causes the clam to bring its tremendous serrated "lips" together with terrific speed, and the danger lies in the rush of water caused by this sudden movement sweeping the man into the creature's grip, from which there would be no getting away. There have been many narrow escapes and some cases in which the baiter was caught. But the natives, think it great fun and talk delightedly of how they had made the clam "think he got something to eat when he only got a stone."-London Daily

Didn't Lose His Religion On the first day of school recently Junior, age five, proudly started off to kindergarten. Junior is usually a rather talkative little chap and his proud mother was a little surprised that he had so little to say when he returned on his first school day. "Did everything go off all right, Junior?" she asked, hoping he would

tell her of his experience.

nual Christmas Seal Sale finds the festivities of the holidays tempered among those actively engaged in the campaign by the knowledge that the originator of the Christmas Seal has died since the conclusion of last year's sale. The man who made financially possible the world-wide war on tuberculosis, Einar Holboell, postmaster at Charlottenlund, Denmark, succumbed to heart trouble in his sixty-second year, on February 23, 1927.

Twenty-four years ago he was a young mail clerk in the post office at Charlottenlund, working far into the night on Christmas Eve distributing holiday greeting cards and letters. He saw that as a rule they would go to comfortable homes, housing happy, vigorous families. But he knew, too, that often to those homes where kind Christmas wishes and good Christmas deeds were most needed, there likely "Electricity!-greeting. An inspiration seized him. Perhaps by a tax on greeting cards this could be accomplished.

His fertile imagination soon pictured a device to encourage the practice of holiday cards and put a voluntary tax on it, too, and thus in Denmark was born the idea of the Christmas Seal. in 1903.

The first sale in the United States was in 1907 when Miss Emily P. Bissell, of Wilmington, Delaware, adopted the idea to raise funds to maintain a tuberculosis shack of eight beds on the banks of the Brandywine, securing \$3000. She in turn had read a magazine article by the great philanthropist, Jacob A. Riis, describing the Danish tuberculosis stamp he had received on the back of a letter from the city of his birth-Copenhagen.

To the degree that electric energy is substituted for manual labor, and man becomes the director of machinery, instead of the slave of toil, is that power made more use-ful and the lot of the individual and the nation improved. What the electric energy generat-ed by the electric power compan-les of this country means in terms of national wealth, is shown by the fact that the lelectric motors of the United States are doing every day as much work as could be accomplished by 175,000,000 men Miss Bissell next aspired to extend the work by a national campaign, and interested the American Red Cross. The first national Christmas Seal Sale occurred in 1908, and brought in \$135,000. Each year since the sum has increased just as it has in Denmark

The Old Sugar Bowl

In the days when candy was a rare treat, children clamored for sugar on their bread. A slice of home-made bread, generously buttered, with a layer of sugar on top, would fill every longing for sweets.

The sugar bowl, to meet its occa sions, was tall, with a roundness that. suggested the girth of an alderman. Always filled, it occupied a place of honor on the table. Behold the sugar bowl of today-a thing no larger than a baby's fist. The candy shop has swept away the large old-fashioned container.

What a Question!

"Where are you going in such a hurry?" asked Mrs. Bibbles.

"Over to John Jagsby's house." said Mr. Bibbles. "He has just telephoned to ask if I could lend him a corkscrew, and I'm taking it myself." "Couldn't you send it?"

"Mrs. Bibbles," said Mr. Bibbles in cutting tones, "the question you ask me shows why most women are unfit to lead armies and make quick decisions in business deals involving millions. When the psychological moment arrives they don't know what to do with it."-Birmingham Age-Herald.

Hurt by Wrong Training

A man should be in his prime phys ically at thirty years old. If he is not, it is because of a lack of balance in his physical training, declares the bulletin of the Dayton department of health.

Overtraining may strain the heart and unbalance the nerves. Under-training is responsible for weakness of muscles and lack of development of the lungs. Dissipation undermines his resistance. One or more of these factors must be present if a man be gins to look and feel old in his early thirties .--- Hygeia Magazine.

Einar Holboell, the inventor of the Christmas Seal, could not possibly have foreseen its magic health value today, not only in raising funds to continue the work, but in carrying to millions of people every holiday sea son the stimulus to guard against disease. These tiny pieces of paper, mul-tiplied a billion fold, have had an inestimable part in teaching the public that tuberculosis can be prevented— can be cured. The double-barred cross which each one bears is the emblem of the anti-tuberculosis work throughout the world.

The Christmas seal has carried to the farthermost parts of America the news that people need not die from tuberculosis. During the period the seal has been in existence, the death rate in this country from the disease has fallen from 198 per hundred thousand population to 83, a saving of over 100,000 lives this year.

As a mark of honor, the Danish Christmas Seal for 1927 will bear the picture of Einar Holboell.

Begin Your Christmas Shopping With Buying **Christmas Seals**

To buy Christmas seals is to broadcast benevolence, to radiate benefaction, to diffuse hope for health where disease most insidi-ously menaces. It is a simple little action, neither expensive nor diffi-cult of performance, yet assuring its rewards.

WHY do so many Sportsmen send their trophies to Clearfield? The rea-son is simply because they know that they will receive courteous treatment and that their trophies will be handled by the largest and best equipped establishment in the state. You will receive the prompt and efficient ser-vice that you have a right to expect. We guarantee satisfaction; and your trophies will be mounted by the latest Museum Methods, at reasonable prices. THIS YEAR we will mount 5 Game

men. Translated into terms of dollars and cents, this means an increase

THIS YEAR we will mount 5 Game heads FREE,-the two largest buck heads, the two most perfect buck heads, and the buck, doe, or bear hav-ing the lucky number.

SAVE your deer hides! We will tan them for gloves, jackets, table covers, pillows, etc.

Write for our Free Illustrated Cata-log and Shipping Tags. We also in-vite you to visit our new office and Display Room, on Nichols St., at the end of the bridge.

Our office will be open evenings and Sundays during November and December, for the benefit of out-of-town customers who wish to drive in.

Don't forget the Free Contest-write for full particulars.

"Known the World over for Quality" H & C Phone-40t Bell Phone-98-M

Ship direct or leave your trophies at C. J. CORDELL'S HARDWARE, and our service truck will get them.

Employees of the Department of Agriculture in Washington have been eating all the ice cream they wanted. The dairy division of the department is making a series of tests to determine how much of the frozen delicacy the average person can eat and which kind they prefer.

DON'T RUN THE RISK OF EATING WORMS IN FOOD

And that photection is heat. "It must be understood that it is the live worm that causes the damage—not the dead one. This parasite is absol-utely destroyed by a temperature of 160 degrees. Boiling water is much hotter than that. It is easy for your frying Don't eat worms! This suggestion sounds unreasonable but it is nevertheless entirely justified at this season." said Dr. Theodore B. Appel, Secretary of Health, today. said

"Of course no one would consciously consume worms. While some people will deliberately take harmful and even dis-asseful things into their system, worms lecidedly are not on the list. However, worms of particular type and breed can be caten unknowingly. Then there is rouble and usually it is of a most seri-us character. s character.

"For example, not so many months ago a college student received a package from nome. Among other appetizing articles t contained raw smoked sausage. Illness and death resulted in eating this meat n its uncooked state. And the cause was vorms.

In its uncooked state. And the cause was worms. "Microscopic in size the parasite, tri-chinella spiralis— a round worm that is curled up like a watch spring_ spends its entire life as the guest of hogs and rats. Man gets his trichinae by eat-ing infested pork. And that is exactly what the infortunate boys got. "There are two things to be emphasiz-ed in this connection. The first is not to be afraid of pork and pork products. The consumption of this food in the Unit-ed States keeps pace with its almost world-wide. And this tendency to eat pork is a most natural, and entirely justifiable one, when reasonably exercis-ed. On the other hand, too much pork, as with any other kind of meat, is not conducive to best health. "The other thing to keep in mind is that while the vast majority of hogs are

hat while the vast majority of hogs are

hat while the vast majority of hogs are ree of trichinae, some porkers enter-ain them; which fact calls for caution m the part of all people with respect to ork and its products. "If it were possible to examine and veed out infested swine, caution on the art of consumers would not be requir-d. But that is exactly where the tro-ble lies. To find trichinae in a live hog s extremely difficult and it is equally ard to dscover in its meat. Neverthe-ss each individual has all the protecach individual has all the prote on against this hazard is

Mr. Michelbaccher was born at Phil-psburg in 1906. He is survived by his parents, two brothers and two sisters.
