COMMON SENSE SAID TO BE BEST SAFETY GUIDE

Common sense, constantly exercised, is the most effective way to prevent accidents in industry in the opinion of the Department of Labor and Industry. The department has ready for distribution a digest of safe practices, recommendations intended to aid both employer and employee.

Calling attention to the total of 2,009 fatal and 174,370 non-fatal accidents in one year it is declared that while most of these safe practice recommendations set forth are practically common sense, nevertheless the accident records of Pennsylvania indicate that it is only through the constant exercise of common sense that material reduction of industrial mishaps will be secured.

More than three score recommendations are carried in the booklet and carry any establishment within the Commonwealth where work is done for compensation and inspectors of the department are authorized to enforce them as mandatory where immediate danger exists.

MAKE PROGRESS ON HIGHWAY BUILDING

Workmen on the highway building of the Capitol group are causing the structure to emerge swiftly from a steel skeleton into some semblance of a structure. The first granite was placed last Wednesday, marking the beginning of the actual enclosure and in a short time the building will be under roof.

The last of the structural steel was completed some time ago on the building proper, but plans for terracing the south side of the building require a steel framework. Work on the north terrace is virtually completed. Concrete work is moving swiftly, the first story finished, the second under way and form setters at work on the third. A considerable amount of concrete work is required on each story and a portion of the roof will include this type of masonry.

WINTERTIME RADIO RESULTS OBTAINED DURING SUMMERTIME

No Longer Is There a Dividing Line Between One Season and the Next in the Pursuit of Radio Happiness.

By DR. ALFRED N. GOLDSMITH Chief Broadcast Engineer, R. C. A.

Radio, unlike canned goods, has no winter or summer season. There are fresh vegetables the year round in the radio garden, so that it is hardly necessary to harvest and can our radio enjoyment during a few months for use in what might be a less fortunate season.

If we mentioned wintertime or summertime phonographic music, we might be laughed at, because the phonographic presentation has come to be accepted as a permanent, unchanging, immune form of entertainment, ready to serve in mid-winter or mid-summer alike. And by the same token, when radio programs and radio services are maintained from one end of the year to the other at the same high levels of excellence, with little difference to indicate the passing seasons, it becomes decidedly out of order to speak of seasons of radio.

Today the signal strength of any first-class broadcasting station within its service range is more than ample to ride high above the normal summertime static level. Indeed, it is only when the radio enthusiast insists on going in search of DX or long-distance signals that the static level becomes troublesome, since he has plunged below it.

Important Considerations Of course the elements of good reception should perhaps be more closely observed in summer than in winter. Among the more important considerations are:

1. Selecting the signals from a station of adequate power, located not too far distant. It is well that the station have a reputation for careful maintenance, and be quite free from the criticisms of poor transmitter operation, haphazard monitoring, varying power, serious fading, wave length wobble, and other signs of poor broadcasting. Fading, it goes without saying, is usually a condition beyond the control of the broadcaster, and may just as well be charged up to the location of the listener.

2. Selecting high quality programs, and especially features with sufficient "body" to cover up such static background as may exist even with high signal level. It is well to note that signal level is one thing, and sound level is another. Thus a dance orchestra or concert band is a better feature in combating static interference than a string trio or a violin solo.

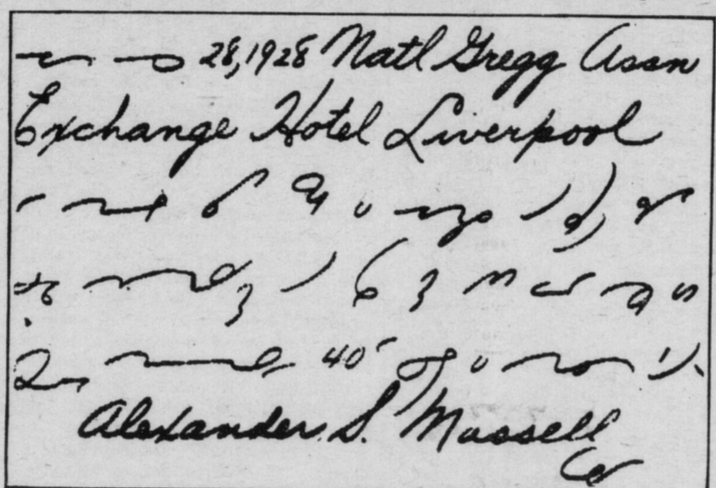

3. It is well to be content with reasonable volume. While it is true that the volume control of the radio set increases or decreases everything as well as signal—proportionately, it is a matter of how much background noise may be present before the listener becomes fully conscious and even irritated by its presence. By being satisfied with reasonable volume during the days of high static, we may reduce the background noise to a minimum. The power of transmitters is not reduced during the summer months. Hence in most localities there is ample signal strength from leading stations to ride well above the usual summer static, with the exception of the occasional thunderstorm in the immediate neighborhood. Yet who expects idea radio conditions every night? Try driving your automobile through a thunderstorm at night, with the dazzling flashes of lightning, the torrential downpour of rain, with the ignition system in difficulties due to moisture, and other troubles! Still, we do not speak of summertime automobile handicaps. We are willing to forego motoring during the occasional storm of winter or summer.

Quality Programs Programs are maintained at the highest standards, although in keeping with seasonable moods and activities of outdoor weather, they may be pleasantly different from those of indoor weather. The skilled program director, in fact, pays close attention to the demands of his summertime audience.

As to the radio listener, there is just as much reason to listen in during the summer as during the winter. Music, enlightenment, contact with the world, the thrill of sporting events, participation in history in the making, and other program features form a rich mental background for our summer life.

If anything, radio may truly be enjoyed to better advantage amid the outdoor setting made possible in warm weather. The acoustics are frequently better when windows can be thrown open. Radio is at its best outdoors, on the porch, or even on the lawn. Indeed, too little attention has been paid to the stage setting for the radio presentation, and summertime offers us many an opportunity in this direction.

PHOTORADIO GREETING IN SHORTHAND FLASHED TO LIVERPOOL BANQUET

Reproduction of shorthand Photoradiogram greeting. Translation: National Gregg Association Exchange Hotel Liverpool The Commercial Education Association of New York City and vicinity extends sincere congratulations and best wishes to you on the occasion of your conference commemorating the 40th anniversary of Gregg shorthand. ALEXANDER S. MASSELL, President.

A radio photograph of a greeting written in shorthand was transmitted recently to a conference of educators and shorthand experts attending a banquet in Liverpool. This was the first time that a message in shorthand had ever been transmitted by Photoradio, and according to engineers opens up new possibilities for condensing lengthy messages and statements into smaller spaces with a consequent reduction in cost of the picture transmitted. The text of the message, not including the date, numbered forty one words of which only the address and signature were written in longhand. The sender was Alexander S. Massell, president of the Commercial

Education of New York, who addressed a message of greeting in this form to the banquet held by the National Gregg Association at the Exchange Hotel, Liverpool, England. John Robert Gregg, the only living author of the shorthand method bearing his name, was a guest of honor at the banquet, which commemorated the fortieth anniversary of the use of Gregg shorthand. The message, was photographed, and the negative placed on a glass cylinder of the Photoradio transmitter located at the New York office of the Radio Corporation of America. It was then flashed across the 3,000 intervening miles of ocean to London and from there delivered to the banquet hall of the Exchange Hotel.

Marconi Pays Tribute to Operators Lost at Sea

Senatore Guglielmo Marconi and officials of the Radio Corporation of America paying homage at Battery Park, New York City, where there has been erected a Wireless Memorial, the only one in the world. Marconi offered a silent prayer "for those who died that others might live."

STATE POLICE REMOVED.

A detail of four state police officers stationed at Portage since February 16 last and in charge of Corporal Charles Rodgers, has been transferred to the Reading headquarters, leaving Monday for their new assignment. In the party with Corporal Rodgers were Privates Riley, Ibbotson, and Cavanaugh. The Ebensburg detail of state police, in the charge of Sgt. A. F. Dahlstrom, will look after the Portage district hereafter.

ment, indicates improvement in the type of stand, according to Howard M. Haines, section chief.

"It is evident, said Haines, "that the public is constantly demanding higher standards of cleanliness, sanitation and general appearance. This attitude coupled with the Department's inspection and regulating power, has eliminated many of the poorer places and resulted in marked changes for the better in still others. While conditions generally are satisfactory, demands for clean places by patrons will still greatly assist in raising standards to a still higher level. The department has done and will continue to do much, but the autoist can do more."
