Dr. Paulson of Indiana examined him and sent him to the dental clinic at the University of Pittsburgh. Dr. Archer, the head of the dental clinic performed the operation. By one of the incisor teeth he found a cyst containing 60 small teeth, all enameled, ranging from the size of a pin head to the size of a pea. In Dr. Archer's fifteen years at the dental clinic he has never found a cyst containing so many teeth. He kept the teeth for the museum. tom" headed for the post office he approaches with a story about being a stranger in town—and can the gentleman "supra a three cent stamp?"

The psychology of the panhandling racket seems dividends, since most of the passersby don't have a pocket full of pennies. The average "touch" is
