### PLAN FOR ANNUAL SCOUT CAMPOREE FOR MIDDLE JUNE

Establishment of definite camping dates and discussion of plans for the construction of a swimming pool at the new camp site in Jenner Township in Somerset County featured a meeting of the camping committee of the Admiral Robert E. Peary Council, Boy Scouts of America, held in the headquarters at Johnstown recently. Leo H. Akers, chairman of the committee, said that camping programs will be conducted at both the council camp sites this summer. He also announced that the committee authorized Chief Executive Howard E. Knepper to complete the personnel for the operation of the camps. A two week camping period will open at Camp Kneppota, Huntingdon county, on July 12th and continue until the 26th. The periods at the new camp will commence on the 28th and continue at least four weeks, it was announced. The annual camporee, which each summer attracts approximately 1,200 Scouts and Scouters, will be conducted again this year at the Mowry Farm on Berkley Hills. The mammoth affair will be conducted Friday, Saturday and Sunday, June 19, 20 and 21, and Akers will serve as the camp chief, a post he held last year. Camping committee members decided to hold the huge camporee despite the rubber shortage and the program of rationing of gasoline. The committee also announced that the council will continue its summer program in every phase in response to President Roosevelt's plea for the continued training of youth in wartime. Despite the curtailment of transportation facilities brought about by the war emergency, council officials predicted that this year's camporee would be better attended than last year's. Site of the camporee, which annually is the largest activity of the council, is located about one mile to the west of the Berkley Hills Golf Course. Under plans advanced by the camping committee the swimming pool at the new camp site will be constructed by volunteer Scouters. Boys attending the new camp will be sheltered in tents and members of each troop will prepare their own meals. Scout officials pointed out that the new system of camping offers boys excellent outdoor training and teaches them self preservation. An debating program is being arranged for the new camp. Rifle and archery ranges will be constructed and special emphasis will be placed on hiking and nature study. Two Hoopoe Indians from the New York Reservation have been engaged to give the Indian lore and handicraft at both camps.

### DIAMONDS from Luxenberg's

SPENDING ENOUGH is the key to SAVING THE MOST

How much you save on the diamond you buy depends upon how much you spend... not how little. But whether you spend much or little, getting most for your money is pretty well a matter of where you buy. What greater assurance can you have of getting value than a money-back guarantee? Well, that's our policy. We guarantee money's-worth or money back.

The lovely 3-diamond 14K gold ring sketched above is priced at only \$7500

### FIREWOOD IN GREAT DEMAND IN STATE

The need for conserving fuel has greatly increased the demand for firewood especially in the rural sections of the state. W. E. Montgomery, chief of the Division of Management, Department of Forests and Waters, states. "Improved wood-burning heaters and furnace have been developed and are proving very satisfactory for this purpose as they possess the qualities for slow combustion, ability to hold fire and deliver a uniform heat," Montgomery said. "The cutting of fuel wood from the farm wood lot, when carried out in the proper way, is one of the most practical methods of improving the forest, increasing its growth and reducing the fire hazard. It should always be done with a view of improving the remaining stand. The removal of inferior trees and merchantable trees ready for cutting, permits the remaining ones to increase in volume and quality. In removing any trees whether of firewood or other purposes, the future of the stand should be considered. It is poor economy to cut the best trees for fuel-wood. A cord of air dried hardwood contains as many heating units as a ton of average coal. Several months are required to season wood thoroughly in order to obtain increased heating. Under ordinary conditions the lost moisture content of cordwood is about fifteen per cent. Air dried hardwood weighs about 3600 pounds per cord."

### STATE WILL REPAIR MANY MILES OF ROAD

Work is getting underway by the Dept. of Highways maintenance force on the resurfacing of more than 3,500 miles of road during the coming season. This class of maintenance work will cost in excess of \$2,000,000. The Dept. is faced this year with difficult problems in endeavoring to secure ample materials for its maintenance operations. Under WPB orders restricting new construction the Dept. will be able to undertake only a small part of the new construction originally planned. The WPE, however, said that maintenance of highways could be continued. Bids have been asked for purchase of more than 24,700,000 gallons of various types of bituminous materials of which some was blended for the placing of surfaces on stone base already laid or planned for the 1942 season. For ordinary maintenance operations millions of gallons of bituminous materials will be needed on the resurfacing projects. Difficulties in obtaining supplies and the various resurfacing jobs will add to the problem of engineers in getting the program completed at as early a date as possible. —Victory rests with us.
