You feel it not only in the cloudsoft ride of this big beauty, but in the way it seems to lean into the curves, the way it holds its "track," answers unfailingly to your touch

The reason? Simply that even before the war, Buick found a way to get greater softness and tires that are available anywhere. Put a Buick wheel

that naturally comes from traveling on 25 pounds instead of 30

In addition, widening the base of the tires gives bracing against when you stand with feet apart. This checks sidesway and the ten-dency of a tire to "roll under" on sharp or fast turns.

Furthermore, the tread is flattened. More rubber is put on the road. More rubber means more traction – more braking power – more resistance to skidding – far, far better car control.

And you have only to compare the handling of a Buick with any other car to see the result. . . .
