

Ebensburg Hi Cops Win at Huntingdon

Ebensburg High School Red Devils defeated Huntingdon Tuesday afternoon on the Huntingdon High School Field, by a score of 7-6.

After spotting the home crew a 6-0 lead in the first round of hostilities, Coach Jimmy Cook's lads roared to a second-period touchdown and then added the all-important extra point on the second try to earn the verdict.

An off side penalty called on the Bearcats enabled the Devils to try the second time for the extra point, which they made. This slight margin proved ample as the two foes waged a grueling defensive battle throughout the final half.

With only a minute and 20 seconds of playing time remaining, Huntingdon gained possession of the oval on the five-yard line. However, a stubborn Red Devil defense refused to yield to the home crew's thrust and the game ended with the Bearcats falling on an attempt field goal from the 15-yard line.

Midway through the opening chapter, Huntingdon recovered a fumble on the Ebensburg 19. The home eleven needed only five plays to negotiate the score. Bob Mock skirted left end for the final six yards and the touchdown.

Ebensburg started its touchdown march from its own 38-yard stripe. After racking up three consecutive first-and-10s, the quarter ended. When play was resumed, the Devils continued their invasion into Huntingdon territory by adding an additional two first downs, placing the oval on the home team's four-yard line.

Barber lunged over tackle for the score that deadlocked proceedings at 6-6. It was this point of the game that the Devils received the second try for the extra point and made it good to gain their winning margin.

Tuesday's game was the final 1947 tilt for both schools.

First downs stood at eight apiece. The summary:

Ebensburg-7	Huntingdon-6

Barnesboro Shades Spangler, 7-0

Barnesboro High School's Red Dragons plowed doggedly through the mud for a first-period touchdown and a 7-0 triumph over Spangler Tuesday evening at Barnesboro in one of Northern Cambria County's most bitter rivalries. A very heavy rain fell throughout the contest that closed the season's schedule for both schools.

The only concerted drive by either team was the victors 35-yard touchdown march. Spangler never passed the 25-yard stripe as he tried desperately to reverse last year's 7-4 setback at the hands of Barnesboro.

The victory gave Barnesboro a one-game edge in the season's won-and-lost column. Their record now stands at five wins and four defeats. Spangler has captured three of its 10 starts.

Barnesboro started its game-winning march by driving a Spangler punt on the Barnesboro's 45-yard marker. After the winners worked the pigskin to the seven-yard stripe, Bill Brown slashed off tackle for the touchdown that proved to be the margin of victory. Right Halfback Zeanchalk blocked his way across the double-stripe for the extra point to complete the scoring. The summary:

Barnesboro-7	Spangler-0
1E-Duker	McKivahan
1E-McMillen	Kowdry
1G-McKay	Tarantio

Your Health . . .

From the Medical Society of the State and Cambria County Medical Society.

The cornea of the eye is the only tissue that can be successfully transferred from one individual to another.

Keratoplasty, or transplantation of the cornea, is being successfully done for the restoration of vision in persons whose vision has been lost through the clouding of the cornea.

All types of tissue have been grafted in the human with varying success in terms of durability. In no instance, except that of the cornea, has it been proven that the donor material has been accepted as part of the structure of the host.

Blood can be transferred from one individual to another. The donor's blood cells, however, will not last longer than the normal life span of the cell and lives only its life span in the new individual.

Cartilage, the gristle or white elastic substance attached to bone surfaces, has been transferred from one individual to another. This cartilage does not live and does not become incorporated into the tissue of the host.

Bone has been grafted from one person to another, and even from animals to humans.

The grafted bone does not live and serves mainly as a source of calcium salts which are dissolved out of the grafted bone and re-deposited in the bone structure of the host.

Nerve tissue has been transplanted to bridge a gap in an injured nerve but it acts only as a tube for the fibers of the patient's nerve to follow through.

Skin grafted to another lasts only from six weeks to three months and then melts away.

In corneal grafting, the graft usually takes and remains clear enough to improve the patient's vision considerably.
