Trees Control Climate, Home Fuel Consumption

There are simple ways to control the climate around your home, according to nursesmen.
 If a windbreak of trees reduces the wind from 12 to three miles per hour at 32 degrees, it will take only half the amount of fuel to heat your home. An actual government test showed a saving of 22.9 percent.
 Trees planted on the west side of your home will give shade in the hot summer weather. Planted on the east side, trees won't keep your house so cool for the sun's heat is hottest in the afternoon.

HOW TO "CLICK"
 as a Party-Line Neighbor

1. When you start to make a telephone call and find your party line in use, hang up gently and give the other person a few minutes to finish his call.
2. When, while talking, you realize that your neighbor is waiting to make a call, hang up reasonably soon and free the line.

These little courtesies are returned again and again . . . with dividends in good telephone service. When party-line neighbors cooperate courteously, everybody benefits!
