Proper Spacing And Depth Help In Vegetable Gardens

For many years Pennsylvania mines are for good, loanly, garbolis, if your soit is heavier, is, if it contains more clay, and should be sown some ablower, than indicated, the very light sandy soils, should be sown desper. In ral, seeds should be sown one chough to insure that lie in soil that is moist and covered deep enough that will not be splashed out by dilary rain.

The Panama Canal has, in redent years, represented the greatest engineering achievement of the modern world. The construction of that canai required the relatively small, but highly valuable, petroleum output of the commonwealth and its developed water power, this state produces one-seventh of all energy consumed in America.

In the total of Pennsylvania coal miner out to the end of 1950 represents a total of more than 17 billion cubic yards, or a total equal to the bulk of material involved in the digging of 71 channels as long and deep as the Panama Canal—state, represents about 40 percent.
