Joe Falger, a student at In-diana State Teachers College, spent the semester vacation at his home here.

MARILYN AND JOE HONEYMOONING

MARILYN MONROE and Joe DiMaggio race out of City Hall in San Francisco after their marriage with plans to just "climb in the car and take off" on a ten-day honeymoon at an undisclosed spot. The actress, hatless and wearing a chocolate brown suit with a white ermine collar, and the former New York Yankee baseball star were married by a municipal court judge in a private ceremony. The couple said they planned the wedding for some time,

THE snug midriff reigns supreme in almost every phase of fashion This means either exercise and dieting or an excellently fitted and made foundation garment The taut midriff is the focal point of this handsome dress done in sheer black wool. A slit parts the high, round neckline There are two up-curving bands, one below the bustline, the other below the waist, both buckled center front

Pepping Up Tired Folks Is Science

Fatigue has been described as a sort of negative appetite for

The negative appetite is usually more pronounced for the specific kind of activity that has produced fatigue, and may not exist for other kinds of activity.

Industrial management has sought an answer to the fatigue meabless.

Fatigue cannot be evaluated stoperly unless changes occur hat can be accurately measured and reproduced within reasonable imits under similar conditions.

Up to the present time, num-erous kinds of fatigue have es-caped accurate investigation be-cause no reliable means exist for measuring them. Nervous fatigue and mental fa-igue are types that to not lend hemselves to auccessful evalua-

ause fatigue in industry such as boredom and social malad-justment, are more numerous than those which can be meas-

In spite of these impenderables, certain physical factors which lead to fatigue have been meas-ured and their importance eval-

As a result, we know that in-distrial fatigue can be reduced. Environmental conditions can be improved, machines and tools can be designed for maximum efficiency with minimum physi-ological stress, and workers can be selected on the basis of their nevalorical fitness for a given

man last Saturday.

Orchid Demonstration

Before I forget I want to tell Before I forget I want to tell Mrs. Blanche McCartney of you about an interesting evening

Cpl. Lawrence Edmiston

Discharged From Service

Cpl. Lawrence Edmiston, son of Mrs. Addie Edmiston, ason of Mrs. Addie Edmiston and husband of Barbara Little Edmiston. received an honorable discharge in Cleveland, Ohio, spent the service on Jan. 14 after week end at his home here. plants as well as how corsages one seed pod. The first five years of the orchid plant life is very important, the first three years being critical. They begin to bloom in seven years. We saw an eighteen-year old plant and it was less than a yard tall. They grow in osmunda, not soil and depend on proper humidity. One dozen plants are worth about one thousand dollars in ten years. A plant blooms once ayear, and hybrids bloom two times in three years. Apples in the refrigerator give off a gas which kills the orchid flower, in fact tends to kill cala lillies,

roses, and many other flowers.

Ancient History of Pears

There is nothing like a fruit with an ancient history to add fresh touch to the January meals. Pears were probably used as a food long before agriculture was developed as an industry. Now thanks to developments in many fields, large quantities of warm-weather pears are available for out-of-season use even in cool climates. Then too, canned pears are among the "plentifuls" and many of us have our own canned ones on our cellar shelves. Like the apple, the pear first came to us from Western Asia by way of European countries. It was apparently native in the region from the Caspian Sea westward into Europe.

Nearly a thousand years before the Christian Era, Homer lasted pears as one of the fruits.

listed pears as one of the fruits in the Garden of Alcinous, which indicates that this fruit was indicates that this fruit was known to the Greeks of his day. Theophrastus and Pliny both mentioned pears. With the migration of the Romans, the pear was distributed throughout temperate Europe. Von Mons, a Belgian physician living from 1765 to 1842 had as many as 80,000 seedlings in his gardens and developed over 400 varieties. On this continent, the early history of pear growing in North

On this continent, the early history of pear growing in North America parallels that of apple growing. The early settlers brought pear seed to this country and possibly trees of some varieties. Bartlett, Anjou, Bosc and Winter Neljs are direct European importations. Pear trees grew in the early colonial orchards, Forty-two varieties were listed in a nursery catalog in isted in a nursery catalog in

Pears will grow well in a wid-er range of soils than most other orchard fruits but the greatest development in this country has centered in the moderately warm.
