BITTEN BY A SCORPION.

ctor's : orrible Experience in Wilds of Mexico,

Dr. George Mallet, of Brooklyn City, who is on his way to the mining camps of the interior of Mexico, writes from Las Yedras the following story of his journey and his experience with a scor-tion.

journey and his experience with a scor-pion: "I started across country on mule back with a dangerous-looking guide, whom I feared at any moment might cut my the at white alleep for the little money I had; fortunately, he did noth-ing of the kind and turned out to be a very good man. The third night out I had an experience that I would not re-peat for all the wealth of Mexico. It was just dark, about 7.30, when I discov-ered a light by the side of a mountain and thought it would be a good time to camp, as we had been in the saddle al-moorning. We made for it and found a little shanty inhabited by two horrible looking specimens of humanity in the

most constantly since 3 o'clock that moraing. We made for it and found a little shart inhabited by two horrible looking specimens of humanity in the most abbreviated of costames. "The guide told them we wanted te stop all night, and the formal prepared a c racake for me. As they of course lad no chairs, I sat on a low stool in front of the fire to cat it. I was scarce-ly seated before I felt something on my neck, and putting my hand up, felt an excee lingly severe sting on my left in-dex finger. It almost made me how!. I immediately tied my handkerchief about it and stopped the circulation and then sucked it, and the old woman parted with a chew of tobacco for it. In about the minutes the stinging ceased and I thought it was all over, when intense vertigo came on with much vomiting and retching, then a sense of great weakness and collapse, accompanied by a profuse cold perspiration, then a sharp tingling began in the bitten finger, ex-tending over the hand and up the arra, then the other arm and hand, then both feet they tingled and streng like and was terraile entrent, and locald scarcely move them; then my fue began to fiel the same way. I called for water and was terrified to find that I had lost all sense of taste and my paw was getting stiff and I could scarce-ly articu ate at all. "Just imagine my feelings—no one mear but those almo t sawages, and they understanding not a word I said, and the horrible sonse of impending death due to the depression caused by the poison. I tried to ask if there was a doctor anywhere near, but could not even speak English now, and of course they did not understand me. It was dying, for the dead feeling seemed to be extending, and I could scarcely move a muscle. With a great effort I happened to have in my bag, to use in and i thraced me up some so that I made signs for a botte of charet that I hande them understand the I wanted ito water, maderstand that I wanted ito water, maderstand that I wanted ito water, maderstand the theritowerite their although they could not bes

The Corean Embassy Enjoys Itself. The Coreans certainly appear to en-joy life in Washington to the full, and they seem dotornined to "catch on" with all the latest faids and annexements of the day. At a handsome billard table in their commodions mansion in lowa Circle they hugely enjoy their initiation into the recondite mysteries of the "caron," while on hot summer evenings recently they were seem strol-ling in the garden, nay, even sitting on the front door steps in approved Wash-ington style, and taking a kindly inter-est in the various babies of the neigh-borbood whose mammas and nurses passed with them along the sidewalk. The Coreans, moreover, appear to have become passionately fond of the intri-cate and mystorious game of croquet, for they have land an adjoining vacant lot fonced in, which makes an excellent crequet ground. Here the gentlemen of the logation, with their wives, used to fall or and a low even upon occa-sion, would greet a lucky lit with hearly hughter and loud even upon occa-sion, would greet a lucky lit with hearly hughter and loud even supon so dear to the American heart, while their peen-liar patrictic methods of resting upon their mallets--somewhat after the seden-tary-manner of the 'inlors of Tooley street"-merely added a rare Eastern flavor to he kindly scene. Possibly it is this genial bonhomic which has led the members of the Chinese Embasys to chate somewhat of the hauteur born of claims to suzerainty, and to call often on the legation in Iowa Circle. In any caso our Corean visitors have evidently some counterpart in their ''Celestial '' language for the old proverb : '' When you are in Rome do as the Romans do.'' — Two of ''Old Hickory's'' Slaves. and it braced me up some so that I made them understand that I wanted hot water, and it seemed almost a year before they got any. When it came, although they could not bear their hands in it, I put both hands and feet into it without feeling it. Then I made them rub havd, and this they did all night, and by morning I slept for about two hours, being perfectly exhausted, On awaking I felt much better; my musb tingled just as though they were asleep, but I could use them; by mov-ing about the sensation began to return. "As soon as I could get up I got into the addle again, hoping to reach some etvilization in case I should get worse. The journey was just half over, so I pushed on for Yedras and soon found that the exercise was ob benefit; the tin-ging ceased, and by that night I could aste the food. I at the next morning and had no signs of the previous night's of great weakness. Now, five days after, I am entirely well, except that I have no half of back of forearm up to the elbow. I was told here that I was lacky in get ting out of it so easily. I am all right ow and apprehend no further trouble."

The Dairying Business.

Chatting recently with ex-Senator Warner Miller, he told me that the lairying business was the largest single nulustry in the United States. The acts are simply stupendons, when they re considered, as I found by question-ing t leading merchant in the produce ine to day. He told me that there are wer 32,000.000 (nyested in dairying. facts are simply stupendous, when they are considered, as I found by question-ing a leading merchant in the produce president, and it was in her arms that resident, and it was in her arms that President, and it was in her arms that a least ninety-live. When James Par-at least ninety-live. When James Par-at least ninety-live. When James Par-taleast ninety-live. When James Par-baleast ninety-live. When James Par-serve years of age, and she appears to get and goue and Hannah, says Mrs. Dorris, f and out-worthy anniversaries of that chilly. "I so well preserved to Agr as to lead to doubts as to her age, and is a bright, and much more so than many of that stat are used to agreat extent. It costs at stat are used to agreat extent. It costs at stat are used to agreat extent. It costs synch goug miles to see. "I so well preserved to Agr as to lead to doubts as to her age, and is as bright, and much more so than many of that stat are used to agreat extent. It costs worth going miles to see. "How old are you, Aunt Hanah?" "Too baserve her drop and the bire sit. To observe her drop and firs milk are mith. Deadly Arrow Poison.

Strange Bet Made by Two Dying

Deadly Arrow Poison. Most of the arrow poisons of Africa hither to known have been of vegetable origin, indeed, all the famous poisons are of this nature. Wr. H. M. Stanley has added one poison to the list which does not appear to be a product of the vegetable singdom. In the Lower Con-go district Mr. Stanley's force was as-sailed by a tribe of dwarfs, who used poisoned arrows. Five members of the expedition were hit by these arrows, four (black men) dying very shortly after, their sufferings having been in-tense. The fifth man, Liontenant Stars, had a narrow scape. The poison of the arrow which hit him had been dry, and so he did not experience the full toxicity of the barb. It was afterward found that the poison is manufactured from file dried bodies of red ants, or pismizes, ground into powder, cooked in works or the poison which causes death? The Lancet says it is formic acid. which exists in the pure state so cor-rosisve, that it produces bilsters on the sime Hence there is little ground, says our contemporary, for doubting that it may she 'deadly irritant by which so provide the poison which causes is than any similar poisons could be prepared from inscets. It certainly is the 'deadly irritant by which so the atthere drives 'as miserable as they idea, that many similar poisons could be prepared from inscets. Not forgetting the fact that homoopths have long had that respect for the inscet. Kingdom which the Lancet desires, we may men-tion that pomoines as a source of toxicity are more likely than formio entaget that, when the prevention of the fact that pomoines as a source of toxicity are more likely than formio entaget the produced the paralyle as they idea that rome the scate shifts and the trospect for the inscet. Kingdom which the Lancet desires, we may men-tion that pomoines as a source of toxicity are more likely than formio entaget to have produced the paralyle as the that respect for the inscet. Source orions that the pomoines as a source Consumptive Gamblers. That the ruling passion asserts itself even in the very face of the grim do-stroyer is an axiom old as the hills. Its truth was evidenced by an incident which recently occurred at the San Francisco City and County Hospital, and which was related to a Chronicle venocter.

A RULING PASSION.

Its truth was evidenced by an incident which recently occurred at the San Francisco City and County Hospital, and which was related to a Chronicle reporte. Some months ago two consumptives in the last stages of the discase lay dying on cots in close proximity to each other. Both victims were sports, who by dissi-pation had contracted phthisis in its most aggravated form. One was known as Bill Chuningham, ayoung gambler who had enjoyed the reputation among his class of being a reckless better on the turn of a card. The other was an English sailor named Staples, whose sole passion was to wager whatever he possessed in support of any opinion which he might express. The nature of the men, in this particular at least, was identical, and both recognized each other in a sense as brothers in misfor-tune. As they lay on their cots, hag-gard and hollow-eyed and gasping for iterath, they daily wasted the remnant of their vital forces in bantering one another about their appearance. "I say, Staples," solid Cunningham one morning in a voice scarcely above a hoarse whisper, "yoa're looking blue. Better brice up, old ma." "Staples, who really reemed to be a dead man as he lay almost breathless with his glazed cyes half open and month widely distended, pulled himself together with an indignant jerk and month widely distended, pulled himself together with an indignant jerk and mathe a vain attempt to raise himself together with an indignant jerk and mathe a vain attempt to raise himself together with an indignant jerk and month widely distended, pulled himself together with an indignant jerk and mathe avain attempt to raise himself together with an indignant jerk and month widely distended, pulled himself together with an indignant jerk and month size greater. Cunningham bat-tied bravely, but he was the first to show signs of weakening. He finally resum-el his old position, but it could be seen that his respiratory action was failing. Suddealy he gave one great gasp, and with that sigh the spark of his life, por-maturely The Corean Embassy Enjoys Itself.

he took the stake money with a gratified smile. Canningham's body was at once re-moved to the hospital morgue. The at-tr-ndant had followed bio cortege to the door and returned immediately to Stapi-es' cot. Searcely five minutes had passed since Cauningham had expired, but when the attendant glanced at Staples he saw that he, too, was dead. The hast pot which he had raked in was elasped in his right hand. To e grip was vise-like and an instrument was employed to remove the silver from the stiffened, unwilling fingers of the corpse.

Imitation Antique Furniture.

Imitation Antique Furniture, This is the way in which the manu-factures of imitation antique furniture produce the goods they soll. If a desk is the i-le to be disposed of they have one final touch to add that excites unqualited admiration for its ingenui-ty. To cover up an artificial crack in one of the drawers they past over it a protect Morris or some other revo-us on some cheap at fifty conts apiece or so, in the autographic market at this is so end they are over it a provide the drawers the source of the or a Robert Morris or some other revo-us on the autographic market at this is so come cheap at fifty conts apiece or so, in the autographic market at this is source in the study of the source of the study of the source of the spoken of . The autilions, however, not first done into wood for models, and then the source and gunpowder to follow. A special branch of the work has to do with clocks of the ancient upright pat-tern, which are copied in every detail for the really old ones. Even the metal faces, with their earions unmer-al, are imitated, and the works of modern pattern as the permitted to fold comfortably while the framework is in process of construction. There is nothing the makers asy, in the line of here of the source of the source for source of at a few days' notice from bold the nordinary person could pos-sibly tell the difference, —[Washington Star.

Two of "Old Hickory's" Slaves. Two of General Jackson's old slaves are still living at the Hornitage. One is "old Alfred," who has convinced himself, and would like to convince all who visit the place, that he was the body servant of his magination. Hannah's claims are, however, beyond all doubt or controvery. They rest on the solid foundation of fact. She was a trusted, confidential household servant long before General Jackson became President, and it was in household servant long before General Jackson became President, and it was in household servant long before General Jackson became President, and it was in household servant long before General Jackson became President, and it was in house hold servant long before General Jackson became President, and it was in household servant long before General Jackson became President, and it was in house hold servant long before General Jackson et lato. The was struck by the great number of vigorous old people whom he met, and this sentence occurs in his "Life of Jackson": "Old Hannah, for example, whose care of the children at the Her-mitage Jackson extols, is now sixty-seven years of age, and she appears to be still in the vary prime of her vigor. She strode about the Hermitage vib us on a chilly, wet day in February, have-headed, with a spring in her stop that belongs to thirty-five. When informed of her age I stared incredulous." Mine and twenty anniversaries of that chilly, wet morning in February have come and goue and Hannah, says Mrs. Dorris "is so well preserved to day as to load to doubts as to her age, and is as bright, ainmated and spry as a woman of forty, and much more so than many of that age."

The Peanut Crop.

tricity. The London Pall Mall Gazette says the heads of the Danish police have in-troduced a way of suppressing intem-perance which is both simple and origi-nal. If a man is found drunk in the streets or at public places a cab is too intoxicated to be communicated with he is taken home. If he is too intoxicated to be communicated with he is taken home by cab, and the pub-lican who has given the last glass of drink to the victim is made responsible for the cab fares, which sometimes amount to a considerable sum.

The future of Australia for the next thirty years will rest with the engineers, The recent discoveries of underground rivers in the most arid portions of the continent have given those words a great er significance. The difficulty of Aus-tralia has always been the fear that the land will not support a large oppulation. These discoveries of water dispel that fear. It now appears that the volumes of rain which fall about once in five years over the greater part of the Au-stralian continent, covering with floods the plains which for four years previous-ly have not known more mo sture than might be given in England by a good fall of dex, find their way through the porous soil into channe's and chambers beneath the surface, where, at a depth of one or two thousand fest, they pro-vide an inexhaustible store of the most pre-ious commodity known to the Au-stralian squatter.

A Strange Place for a Bomb. The death of Signor Bottesini, the great double-base player, gives rise to many interesting reminiscences. In one circost incident of his life, Connt Bac. ciocchi, Master of Ceremonies to Napo-leon HI. was concerned. Bottesini had been commanded to play at the Tuilor-ies, and in the antechamber he was ac-costed by the Count with the astonish-ing inquiry whether his double bass was "empty or full." It was not until the Court functionary had made a minute inspection of the instrument that the explanation was afforded. The Orsini tatempt to blow up the Emperor with a bomb, it seems, had scared the officials, tho gh how an explosive could have been smuggled into a contra-basso is not quite clear. – New York Tribuno.

The flottest Weather Known. "What is the hoitest weather ever fucestion is answered in the bulletin of the Kentucky Statistical Weather Ser vice. The la ghest temperature record-ed by the United States Signal Service was at Phenix and Fort McDowell, Ariz, in June, 1883. The thermometer marked 19d degrees. However, unoffi-cial observers report temperature as Mammoth Tank and Humboldt, Cal. The coldest weather recorded by the sorvice was 69 degrees below zero at Poplar Kiver, Mon. But this is a warn place compare d with Word of and, Si-berin, the coldest inhabiled apt on the face of the globe. The thermometer there has been as low as 90 degrees be tow zero. In view of these figures let as not complain of a paltry 90 degrees ubove zero, - Louisville Post.
