How to Guess a Woman's Age.

A volume of memoirs has just been published giving the experiences of a French Fresident of Assizes. It bears curious testimony to the inaccuracy of women on the subject of their own ages, As the writer's information is from thy calender, he speaks only of the criminal classes. The only instances in which he finds correct dates given by women are when they are under twenty-five or over eighty five. At these periods of life, he says, they are to be trusted, At all other periods the sure controlling, trate has been able to give a rule for guidance. He finds that female prison, erri invariably state their ages are in the fortles, they bodily set them down in the first, they bodily set them down in the first, they bodily set them down in the thirtles, but conscience assering itself, they keep as near the truth as they can and fix them at thirty-nine. Whether male criminals do the same the magistrate does not state.—London News.
