DR. KILMER'S SWAMP-ROOT CURED ME.
La Grippe! Grippe! Grippe! After Effects Cured.

Mr. Bilger writes: "I had a bad attack of the Grippe after a time, and a second attack, it settled in my kidneys and liver, and Oh! such pain and misery in my back and legs. The physicians' medicine and other things that I used made no impression, and I continually grew worse until I was a physical wreck, and given up to die. Father bought me a bottle of Dr. Kilmer's SWAMP-ROOT, and before I had used all of the second bottle I felt better, and to-day I am just as well as ever. A year has passed and not a trace of the Grippe is left. SWAMP-ROOT saved my life." D. H. BILGER, Hulmeville, Pa. Jan. 10th, 1903.

DROPSY! DROPSY! DROPSY!
Suffered Three Years.

"Respected Dr. Kilmer & Co., Binghamton, N. Y. My wife had suffered for three years with Dropsy, during that time she was attended by five different physicians, none of whom helped her for longer than a few days. We also used besides, more than twenty different remedies, but, nothing would help.

"Then we used your SWAMP-ROOT, and after she had used three bottles relief was apparent, hence she continued to take it until she had used twenty-five one dollar bottles. Now she is healthy and strong, as she never was before. She will be forty-one years old on the 9th of next March and next to God she owes her life to SWAMP-ROOT. I send you this testimony and enclose herewith a photograph of my wife. Your true friend, HERMAN BROERING, Feb. 23, 1903. Loraines, Shelby Co., Ohio.

A WOMAN IN AUTHORITY.

SHE HEADS THE FEMININE EMPLOYEES OF A LARGE HOTEL.

The Housekeeper of a New York Hotel Outlines the Duties of the Help Whom She "Bosses."

OVER five thousand women—a regular army of sturdy Amazons—are employed in the hotels of this city. The Waldorf, which has the largest number of women on its pay-roll, has introduced them into several departments hitherto sacred to the sterner sex, and has also created some new positions to be filled by them. It now employs 125 women. One-half of this number is under the command of the housekeeper and the other half is ruled by the steward and his aids.

The hotel clerk has long figured in journalism as a lordly individual, who wears diamonds and an air of authority. In the matter of diamonds he has no rival, but when it comes to authority there is an autocrat who occupies a secluded position behind the throne, but who bows to no command save that of the proprietor. This being the housekeeper. She may be recognized by her black gown, her great bunch of keys, and her eagle eye. She is, in the better hotel, a woman of education and refinement, and above all, of executive ability. Her duties range from those of a General to those of a private detective. She must direct her force of workers, which includes not only the chambermaids, but the cleaners and linen-room girls, as well as the hall boys and men engaged to move furniture, hang curtains and do the thousand and one things that require daily attention.

"Your duties are not very arduous, are they?" asked a Sun reporter of the Waldorf housekeeper.

"Come with me," she said, simply, but with an air of "I'll show you," and led the way to a large, light room on the tenth floor. The walls were lined with shelves piled high with snowy linen—sheets, pillow cases, tablecloths, napkins, covers for dressers, and all the washable paraphernalia of a great hotel. Three neat and nimble fingered girls spend the day here, mending and making linen, and dealing out the clean pieces in return for the soiled ones brought up by the chambermaids. The laundry opens out of the linen room, and here half a dozen immense tubs were presided over by a head laundress and her brawny assistants, while the thump, thump, of the irons made a dull accompaniment. As the housekeeper opened the door of one of the spicy cedar closets, filled with blankets and silk quilts, a second black-robed, key-dangling, eagle-eyed woman came down the hall.

"That is one of my assistants," said the housekeeper. "I have two, and the duties which do not seem arduous to you, keep all three of us pretty busy. In the first place, one of us has to see that the fourteen cleaners are called at 3 o'clock in the morning and superintend their work from that time up to noon, when they are supposed to have finished. These cleaners wash the marble stairs, the office and vestibule floors, all the uncarpeted parts of the house. The chambermaids are called at 6 o'clock, and begin by sweeping the carpeted halls and stairs. At 7 they breakfast, leaving one girl on each floor to answer calls. There are thirty-four chambermaids.

"What sort of girls are they? A very nice sort, I assure you. They must be because they are always thrown with the guests, and if they were not neat, quiet, honest and modest we could not keep them. Each girl has from twelve to eighteen rooms to take care of, and even if a room is not occupied it must be dusted and cleaned every day. When the girls have finished their work they are at liberty; but there must be one girl 'on watch,' as we call it, all the time. They take turns in doing this. On watch they wear black dresses with white collars and cuffs, but about their work they wear light chintz gowns. At 9 o'clock at night they carry the towels to the rooms, turn down the beds, see that there is fresh water, and find out whether anything is wanted. I want to show you this parlor," said the housekeeper, who, during the conversation, had conducted the reporter down to the second floor. "I have left my keys upstairs, but—" and she gave two sharp claps with her hands.

A girl at the other end of the hall turned and came back quickly.

"I see that you have your pretty parlor locked," said the housekeeper. "That's right. I like to have you careful. I want to show it now, however, and have left my keys up stairs." "Oh, all right!" said the girl. "But shure, you know, these people do make me mad. They come up sayin' they've a permit from the office, and they go in with their drippin' umbrellas, and they set down with their wet clothes right on my satin chairs, and they make me tired!"

The girl dusted the gorgeous gilt furniture as she spoke. The housekeeper, meanwhile, was glancing critically around with the eagle eye before mentioned.

"What's this stain, Mary?" she said, pointing to a faint spot on one of the chairs.

"Oh, now, will you look at that? Shure, it's that woman from Philadelphia. They come in at midnight last night, and their clothes—they was that wet with the rain that I thought shure they'd walked across the North River. An' they said the same old thing about a permit from the office, an' they felt o' the walls an' tried the piano—"

"Who left it open now, Mary?" asked the housekeeper reprovingly as she closed it.

"Shure, I think that woman did, for when she sat down in this chair with

them wet clothes o' hers, I forgot every thing else."

"Well, be as careful as you can, Mary. What are these marks on the door?" pointing to several deep scratches in the mahogany. "Oh, I see. It opens against this table. Move that a little and I will have a protector put in. Humph! that table needs a cover."

And so it went. The housekeeper took the reporter into a number of rooms, and in each one she made a note of from one to half a dozen things demanding attention.

Several hotels were visited by the reporter, but the duties of the housekeeper and her corps of workers were practically the same in all.—New York Sun.

The Hazard of Whale Fishing.

It seems astonishing that men should be willing to adopt so hazardous a method of getting a living as whaling is nowadays in the far northern waters of Arctic Alaska. But the risks do not deter the bold hunters from pursuing these valuable mammals into the most remote accessible regions of eternal ice. Annually they follow the whales around the most northern extremity of the American continent, and some vessels have even ventured to pass the winter in the Arctic Ocean. The value of the fishery consists not so much in the oil taken as in the whalebone, which is obtained from the mouth of the animal. This is worth from \$4.50 to \$5 a pound. The product of a fair sized bow-head whale at present prices will fetch about \$8000. A good sized whale weighs 150 tons, and yields about 2000 pounds of whalebone. His tongue is fifteen feet long, eight feet thick and gives twelve barrels of oil. His open mouth is from fifteen to twenty feet across. The blubber forms a coat around him from ten to twenty-two inches thick. It is four feet from the outside of the body to his heart, and the latter organ is 216 cubic feet in size. His brains will fill a barrel.

A few years ago whales were plentiful in the North Pacific, Bering and Oshkosh seas. The steady pursuit of them has driven them into the Arctic Ocean, where they try in vain to find a safe refuge in the ice. In 1852 the whaling fleet of the Pacific comprised 278 vessels, and the value of the catch was \$14,000,000. That was probably the most profitable year of the industry in those waters. Since then it has decreased, until in 1892 the value of the catch was less than \$800,000. At present there are only about fifty vessels engaged in the business yearly. The whaling ships are manned on the co-operative plan. The men instead of receiving regular wages get a percentage of the profits.—Washington Star.

Good Tree to Have About.

A great deal of attention is being attracted to a tree indigenous to New Caledonia, called the mignon. It has hitherto been known mostly for the oil of cajuput, which it furnishes to the perfume makers, but other and marvellous properties of it have lately been discovered. It is said that its leaves, besides furnishing a pleasant aromatic adjunct for sauces will keep meat from spoiling, and exercise over the country about it the same wholesome influence as the eucalyptus. The essence is employed medicinally for rheumatic ailments, with even more success than therefrom. In Caledonia the mignon enjoys the reputation of rendering healthy every territory in which it is introduced. This is undoubtedly true, for in all parts of New Caledonia where this tree is at home the fever is not known at all. The New Hebrides, not far from New Caledonia, are also in possession of this health-preserving mascot. The anti-septic properties of the oily essence of mignon, abundantly contained in the leaves, are very great, and wherever they happen to fall into the swamps, morasses or rivulets they disinfect the water completely. Like the eucalyptus, the mignon needs plenty of sunshine. The seeds, which are very fine, must be carefully sown and covered with about an inch of earth. It is best to do this in the months of May, June and July. By December they will have advanced enough to be planted in the place where they are destined to grow. The tree is easily acclimatized, and in the warmer countries can be made as much at home as in its native soil.—New Orleans Picayune.

A Big Halibut.

There was landed recently at Stromness, Orkney, a halibut of extraordinary dimensions, measuring six feet ten inches in length, and weighing no less than 245 pounds. The fish was discovered by two lads who were engaged in hauling lobster creels at the back of the Holms, a distance of about a mile and a half from Stromness Pier. It was observed in the sand apparently asleep, and as they had no appliances with which to attempt a capture, they marked the spot and returned home to acquaint their father.

Armed with a kind of harpoon, to which a line was attached, they went back to the place and found that the huge fish had not moved; carefully watching an opportunity the father succeeded in planting the harpoon in the back of the halibut. The weapon entered the spine and rendered the fish powerless, but on account of its size and weight it was only after considerable difficulty that it was got on board. It proved a splendid specimen of the halibut, and was in a first-rate condition. In its stomach was found a variety of small fish, which weighed upward of six pounds. It was at once carefully packed and despatched by steamship and rail to the London market.—London Field.

Queen Victoria suffers from rheumatism, not from nervous tension, as was reported.

SCIENTIFIC AND INDUSTRIAL.

An electric railroad is one of the sights of Siam.

The Greenwich clock was electrically connected with several London railway clocks in 1860.

Scientists affirm that ice frozen at zero temperature is more durable than that which forms when the mercury is above that point.

The Lancet says that Egypt as regards sanitation is now about on a level with what England was in the days of Queen Elizabeth, when the mortality of London was forty-five per 1000.

It has been determined that the temperature of an electric arc light remains constant at about 3500 degrees. This temperature cannot be increased or diminished by changing the size or amperage of the arc.

It has long been known to architects that the perpendicularity of monuments is affected by the rays of the sun. This phenomenon is due to the greater expansion of the side upon which the sun's rays fall.

A remarkable increase in the use of oil as a fuel on Russian railroads is shown by recent statistics. In 1881 there were used 1914 tons of naphtha, while in 1890 there were used 291,807 tons of naphtha and naphtha residues.

A French novelty in the way of a timepiece is a floral clock, the long hands of which sweep above twelve flower beds, each bed being different from all the others in color and variety of flower. The hands are moved by subterranean mechanism.

The smallest holes pierced by modern machinery are one-thousandth of an inch in diameter. This drilling apparatus, which was the invention of one John Wennstrom, is designed to make 22,000 revolutions per minute and is used in boring sapphires, rubies, diamonds and other gems.

It is estimated that the Mississippi River annually discharges into the Gulf of Mexico 19,500,000,000 cubic feet of water. Of this prodigious quantity the 1-200th part will be sediment. Thus the Mississippi River annually deposits alone into the Gulf of Mexico sufficient mud to cover a square mile of surface to a height of 240 feet.

It is a well-known fact that heavenly bodies invisible to the human eye, even when assisted by the most powerful telescope, may be detected by the photographic plate. A practical illustration of the value of photography in this connection is found in the experience of March, when no fewer than eighteen small planets were detected photographically. Twelve of these were discovered by M. Charlois, at Nice.

Dr. E. Hutchinson said, in a recent lecture before the Royal Institution, at London, that with an electric motor a speed of 1000 miles an hour could be obtained—"though beyond that point they perhaps entered the region of projectiles rather than of locomotives." This remarkable speed is obtainable because of the great advantage of the purely rotary motion of an electrical motor over the reciprocal motion of the piston and connecting rod of the steam locomotive.

Something wonderful in the clock line has been constructed by a mechanic in Warsaw, Poland. It represents a railway station with a clock tower giving the time in four countries. Trains run into or depart from the station every fifteen minutes. Station agents, telegraphers, ticket sellers, with lines of passengers, are seen in action, and the usual bustle and tumult of a station are heard and seen, bells ringing, whistles blowing, etc.

The Garden Way.

In a little village in Sussex, England, there is a veritable Milky Way of lilies, where thousands of white blossoms shed their perfume and where women gardeners tend and pack and ship the fragrant products. Twenty-five years ago a single lily bulb was given to Mrs. Bates, a farmer's daughter, who tended the gift with the care women bestow on flowers, and when sixteen bulbs had resulted from the original one, and Mrs. Bates, finding that her children, as she called them, had outgrown the sunny window where they grew, she planted them in the corner of the garden. Ten years ago a daughter of Mrs. Bates, inspired by the enterprise of the time, sent some blossoms to the London market, and now, in association with her sisters, has made the Bates lilies famous for their beauty and perfection. The daughters are keen business women, interviewing their buyers at the six o'clock market, selling without interference of agents to private customers, florists and commission merchants. The average product is 600 dozens a week, which are packed by women in the gardens. Women are taking up floriculture to a considerable extent in England, and at the Horticultural College landscape and kitchen gardening are taught by lectures, demonstrations and practical work. It is an interesting fact that applications are received at the college faster than the women can be trained.—Prairie Farmer.

How to Secure Confidence.

This from an authority: "Don't ask questions, don't mention names, listen occasionally, and you will find yourself a society favorite." The first "don't" seems to have been most cordially placed. There is nothing which creates a pleasanter impression, and which really leads to the most complete confidence than the tact which listens sympathetically to all a companion will say, but never probes deeper by an impulsive interrogation. One learns to trust such an acquaintance, and feels in her company a peculiar sense of security that is very satisfying.—Brooklyn Citizen.

A Bird Story.

Will you allow me to add a touching instance of courage to your pleasant bird stories? Early one morning last summer I was called to the window by a great noise among the bird people of the garden, and saw the following scene. A young blackbird was standing fascinated by a cat, who was crouched under a bush ready to spring on him. An old blackbird, on an ilex close by, was uttering loud and agitated cries, and there was a general cackle of anger and sympathy from other birds all around. After a few seconds the cat sprang on the young bird and held him down. At that instant the old bird came down on them. There was a moment's struggle, the bird beating her wings violently in the cat's face, and I think, pecking at her eyes; then the cat jumped back to her bush, the young bird made off with long hops, and the old one flew up to the ilex, amid a jubilant chorus of commendation which lasted quite some minutes. I never saw this before, though I have seen a robin come quite close to a cat stalking another bird and scold and flap her wings in her face.

The ways of birds are delightful, and in a small garden you can have many by keeping earthenware saucers full of water for them to bathe in.—London Spectator.

Commerce of Long Island Sound.

"The American coast has many fair spots, but its gilt edge, so to speak, is the country bordering on Long Island Sound," said Captain Charles Hervey Townsend, of Connecticut. The captain is famous as the projector and persistent promoter of the great breakwaters now being constructed by the Government at New Haven.

"It is a grand work," said he, "and will be of immense benefit to the country I have just eulogized. The break water will be about two and a half miles long, and will give us a roadstead of ten square miles, in which the fleet of the world may float securely."

"At low tide there will be eight fathoms of water. About one mile of the work is finished, and to complete it will cost, according to the estimates, \$2,200,000. Its great utility will be appreciated when I tell you that the value of the shipments to New York via Long Island Sound are greater than the total of that which comes in by way of Sandy Hook. The commerce that finds its way into New York through this eastern approach surpasses any other waterway traffic in America. Along this very Sound in the not distant future, it is within the bounds of reason to believe that 19,000,000 people will have homes."—Washington Post.

Reindeer meat is canned in Norway.

NO BETTER PROOF.

NO BETTER PROOF.
To the Editor of the New York Herald:
"Mrs. John Gemmill, of this place, was thrown from a wagon, sustaining a most serious injury to her spine, and was unable to walk. Her daughter providentially procured two bottles of
ST. JACOBS OIL,
which Mrs. Gemmill used. Before the second bottle was exhausted, she was able to walk about, and has been
COMPLETELY CURED."
Very truly,
M. THOMPSON, FOOTBASTER.

The Parson's Knowing Appeal.

In a church in the north of England on a recent Sunday morning a clergyman, appealing for subscriptions for the steeple fund, addressed his congregation as follows: "Now, my dear friends, I hope you will subscribe handsomely, as we are earnestly in need of funds; but before you do so I wish to say you must be just before you are generous. Therefore, brethren, if any of you owe money, pray think of your private claims first." It is hardly necessary to add that every member of the congregation gave his quota to the collection.

It Was a Jackpot.

Boston—So that's Tombstone Bill, is it?
Denver—That's Bill, stranger; the smartest cuss this side o' the Rockies.
Boston (sarcastically)—Do you raise many like Bill round here?
Denver—Well, I reckon not. The last fellow that raised Bill went broke for six months.—Lowell Citizen.

Of Importance to All Who Do Business.

Send a check or a postal or express money order for \$3.75 to The Trade Co., 230 Devonshire St., Boston, and you will receive by prepaid express a copy of a handsomely printed and securely bound book telling you how to increase business; how to decorate your store windows; how to advertise in newspapers; about circulars, cards and posters; the cost and use of engraving of every class; the expense of lithographs and their value; how to produce effective billboards; cards and other commercial printing, with information on the management of employees and everything pertaining to business publicity—the only work of its class in the world; indispensable to every business man whether he be an advertiser or not. Written by Nath'l C. Fowler, Jr., the expert on business and advertising. 518 large pages, handsomely illustrated. You take no risk; if after receiving the book you don't want it you can return it and get your money back.
Luther wrote a parody of the Psalms.
Impaired digestion cured by Beecham's Pills. Beecham's—no others. 25 cents a box.
Why 30 hours? Use Hatch's Universal Cough Syrup. 25 cents at drug stores.

Do You Wish the Finest Bread and Cake?
It is conceded that the Royal Baking Powder is the purest and strongest of all the baking powders. The purest baking powder makes the finest, sweetest, most delicious food. The strongest baking powder makes the lightest food. That baking powder which is both purest and strongest makes the most digestible and wholesome food. Why should not every housekeeper avail herself of the baking powder which will give her the best food with the least trouble?
Avoid all baking powders sold with a gift or prize, or at a lower price than the Royal, as they invariably contain alum, lime or sulphuric acid, and render the food unwholesome. Certain protection from alum baking powders can be had by declining to accept any substitute for the Royal, which is absolutely pure.
