Submarine Photography. A short time ago Louis Boutar brought himself to the knowledge of scientific naturalists by undertaking an exploring tour of the Red Sea, from which he brought back a strange and curious collection of fish and shells, embracing several specimens entirely unknown. Continuing his researches on the coast of France, Mr. Boutan as sumed a diver's costume in order to observe at the bottom of the sea the metamorphoses of certain mollusks im possible to cultivate in aquaria. He was struck with the wonderful beauty of submarine landscapes, and resolved to photograph what he could, since s simple description would savor to much of an over vivid imsgination. At first he worked in shallow water with a water tight apparatus, and the clear ness of the water allowed him suff-cient light to sensitize the plates. But proportionally as the water deepend clearness diminished, and the motion of the waves clouded his proofs. pondent thus dispose of that vener-able slander, the "wickedness of Chi-cago." There are over 350 churches in this dity, from the pulpits of which ring out 700 warnings each Sabbath to those who have ears to hear. These churches have a seating capacity of 250,000. In addition to this three of the theaters and one large hall and several smaller ones are utilized on Sunday morning for religious purposes. Supposing that such of these churches are but half filled at each service, that would pos-sibly be a fair average for this or any other city, would give an attendance of 125,000 for each service, two services each Sunday (the Momar Catholic and Episcopal churches have more.) will several services in the aforesid thea-ters and halls will bring the total up to considerably over 360,000. Then take into consideration the many Sun-day-acheols, some of them having an average sitendance of 4,000 and 6,000. So, notwithstanding all that might be sid about the wickedness of Chicago, she will compare favorably with like cities even in Puritan Canada."
