Electric Wires,

Bome writer very aptiv likens the nerves tosheotric wires, and the general working of
their system to that of electric cars. A man
who "slips his trolley" like Mr. Jeremiah
Ener, 1812 W. Lombard St., Baltimore, Md.,
will need something better than even a galvanio battery to set him all right. Mr. Eney
found that something in the following way.

"I suffered," he says, "a long time with
acuraligal in the head. I gave St. Jacobs Oil
a fair trial and am entirely cured." In this
way the great remedy acts as a motorman to
restore broken wires, and set the system to
perfect action.

"Dro you know that Miss Blones was going to marry young Smith?"
"I knew it; but I cannot understand how a girl as intelligent as she is can tonsent to marry a man stupid enough to want to marry her."—Brooklyn Life.

An Important Difference.

To make it apparent to thousands, who think themselves ill, that they are not affected with any disease, but that the system simply needs cleansing, is to bring comfort home to their hearts, as a costive condition is easily cured by using Syrup of Figs. Manufactured by the California Fig Syrup Co.

The peanut as an article of food is rich in

To estimate height a colt will grow to: Take a colt at any time between six weeks and one year, put him on a level surface so that he will stand auturally, then measure the distance from the hair of the hoof to his knee coint, and for every inch or fraction thereof he measures he will be hands high when matured. If he measures so injurious. In addition, raspberry lifteen inches, he will be fifteen hands wine should be bent down and covered partially at least. Winter winds hands high, and so on.—New York World.

Dyserver winters, even when plants are not killed outright by the changes of temperature, protection would more regularly be given. It is quite a more regularly be given. It is quite and the more regularly be given. It is quite a more regular

HOW TO FEED MEAL TO A COW

WATER-CRESS CULTIVATION.

WATER-CRESS CULTIVATION.

In answer to inquiries, the Farmers' Voice gives the following directions for growing water-cress: Water-cress requires a clear running stream and a gravelly soil. The roots should be planted in the spring of the year in slow-running streams, where the water is from three to eight inches deep. When the roots are well established the plants will rapidly increase, and, by their natural process of seed-sowing and spreading of the roots, they will soon cover the surface of the stream. When planted the rows should be planted with the course of the stream and about eighteen inches apart. The plants should always be cut, not broken off, as breaking them off is injurious to the plants. After they have been cut off two or three times they will begin to stock out or thicken out, and then the offener they are cut the better. When raised from seeds they should be sown on the margin of the stream, and when of suitable size transplanted into it, where it is an inch and a half or two deep. The most suitable time for sowing is in the months of April, May and June. There an inch and a half or two deep. The most suitable time for sowing is in the months of April, May and June. There are said to be three varieties of water-cress—namely: the green-leaved, which is considered to be the easiest to cultivate; the small brown-leaved, which is thought to be the hardiest, and the large brown-leaved, which is said to be the best for deep water.

tent.

Opportunity is offered to establish new plantations until the ground freezes and puts an end to such operations. In transplanting remove fully one-half the canes and set out well in mellowed soil; cover with deep mulch and protect the entire plants as well as possible. If spring work will not be too pressing the plant may be secured now and "heeled in" to be in readiness for setting early next spring. Really spring is a better season for transplanting than fall.—Prairie Farmer.

innuls high, and so on.—New York World.

How TO PEED MEAL TO A cow.

The best way to feed meal to a cow is to eat hay and wet it only as much as to make the meal adhere to it, and mix this with it, adding a small handred in the more completely digested than it is were given by itself, in which case it is apt to pass on to the thirds and mix the more completely digested than it is were given by itself, in which case it is apt to pass on to the thirds and mix the runnination, which is necessary to the perfect digestion of a cow's food. Five pounds of cut hay and three quarts of cornaced will make a full single feed for a most viving ten or twelve quarts of mix feed a. It is not desirable to try of feed a. It is not extend to try of feed a. It is not extend to try of the control of the part to be diverted to running the control of the part to be diverted to a feed of at the part to be diverted to a feed of the part to be diverted to running the part of th

Within a year Eleanor E. Greitorex has become one of the best-known of American illustrators.

The English Queen's favorite wall paper has a bright blue ground sprinkled with white stars.

Miss Clay, of Lexington, Ky., will be a candidate for the office of City School Superintendent of that city.

BITS OF LAMP LORE.

Lamp wicks should have the charred part rubbed off with a rag kept for that purpose. They should very seldom be cut. They should not be used so long that the webbing becomes tight and non-porous.

Lamps should be kept filled with oil. It is bad for the wick and burner when the oil is left over from one evening's reading and is made to do duty a second time.

The tank should be filled again.

ing's reading and is made to do duly a second time.

The tank should be filled again.

About once a month the wick should be removed, the burners unscrewed and boiled in a little water in which common washing soda has been dissolved. This will remove the almost imperceptible coating of dust and grease that forms on the brass.

The lamp chimney should be washed in warm, soapy water each day, a mop made especially for such work being used. When dried it should be polished with soft newspaper or chamois.

THE ART OF PATCHING

THE ART OF PATCHING.

How many patch clothes, particularly children's clothes, with little regard to the stripe and check, and sometimes to the shade of the garment patched. Then some seem to think the larger the patch the better. Of course the thinness of the cloth near the hole will have something to do with the size of the patch, but when a three-cornered tear is mended take a piece exactly matching the check or stripe of the garment, and just large enough to leave a space equal to the fell taken on the other side between the hem and the run; then on the right side make a cut in each corner equal to the depth of the fell, and a much squarer, neater patch is made. If a woolen garment, it should be dampened and the fell thoroughly pressed with a moderately hot iron. A patch should never be put on the right side of a garment. If the rent or wear is near a seam insert a side of the patch into this, and sometimes two seams are so near that the patch can scarcely be noticed. Generally people fasten the patch on the wrong side by running a thread along near the edge. A better way is to catstich the patch on to the garment.

POTATO COOKERY.

It seems a pity to the New York World that when there are so many delicious ways of serving potatoes, they are ever sent to the table in the unappetizing lump form which is most prevalent. Here are a few substitutes for the everlasting "boiled" potato. Potatoes in Jackets—Bake as many potatoes as are needed. Cut a small piece from one end and a larger one from the other. Remove the inside and rub through a sieve. Put on the fire with half an ounce of butter and one ounce of grated cheese for every four potatoes. Add boiling milk, salt and pepper as for mashed potatoes. Fill the skins with this paste, sprinkle tops with grated bread crumbs and cheese and put in the oven to brown. Potato Souffle—Boil six good-sized mealy potatoes. Rub through a sieve. Sead a teacup of sweet milk and three teaspoons of butter. Add a little salt and pepper and mix with the potatoes. Beat to a cream. Add one at a time the well-beaten yolks of six eggs. Beat the whites to a froth and str lightly into the mixture. Pour into a well-buttered baking dish and bake for about half an hour in a quick oven.

Potato Balls—Mash some potatoes with salt, pepper, butter and a little chopped parsley. Roll into balls, dip in beaten egg, roll in bread crumbs and fry for a few minutes in hot butter.

Texas Baked Potatoes—Mash and season with pepper and salt some good Irish potatoes. Mince a large onion

which is thought to be the hardlest, and the large brown-leaved, which is strong to be the hardlest, and the large brown-leaved, which is strong to be the hardlest, and the large brown-leaved, which is strong to be the hardlest, and the large brown-leaved, which is strong to be the hardlest, and the large brown-leaved, which is strong to be the hardlest, and the large brown-leaved, which is strong to be the hardlest, and the large brown-leaved, which is substituted to be the best for deep water.

SMALL FRUITS.

Now it is time to apply manure to blackberries, currants, raspberries and other small fruits. It should be seeked broadcast at the roots of these plants, which should run over considerable territory. Antunn and winter are the most favorable seasons for spreading the manure, since the raise and snows of winter can distribute the fertility through every portion of the soit much more cheaply and effectively than man can with the best of tools for the purpose. With the so-called lardy varieties of fruits winter protection, even in quite northern latitudes, does not appear very general, and yet, without doubt, this is the track of the plans. If cultivators could but see how their crops are oftentimes diminished.

Baking Powder

ABSOLUTELY PURE

A Lucky Presentiment.

An incident of the recent race between the train robbers and their pursuers, which resulted so disastrously to the former, was told during the past week. One of the party who went out from Kalispell to join the chase was a young man who had been in bad health. He was suffering from long trouble and had had several hemorrhages. Thinking the open air would do him good, and that if he happened to get shot by the outlaws it would only hasten the inevitable end, he started.

On the day before the fight he thought he would take a walk up the railroad alone. The air was cool and already accomplished more for him than physic had ever done. So he started. A couple of miles from where he left the party he saw a pile of railroad ties alongside the track. The idea struck him that that would be a good hiding-place for a "Chicketter" the desire to look behind that pile of tes the discinct of the day became stronger as the distance lessened, and when he reached it the desire to look behind that pile of the day became stronger as the distance lessened, and when he reached it the desire to look behind that pile is led distinct and when he reached it the desire to look behind that pile stred it he distinct and when he reached it the desire to look behind that pile sended it the desire to look behind that pile sended it the desire to look behind that pile sended it the desire to look behind that pile sended it the desire to look behind that pile sended it the desire to look behind that pile sended it the desire to look behind that pile sended it the desire to look behind that pile sended it the desire to look behind that pile sended it the desire to look behind that pile sended it the desire to look behind the dissence, and when he reached it the desire to look behind the he desire to look behind the her ache lessened, and when he reached it the
