

### HONEY LOCUST FOR AX HELVES.

I have made a discovery—new to me, at least—that the timber of the honey locust, *Gleditsia triacanthos*, is as good, or nearly, as hickory for ax helves and handles of all kinds, writes E. S. Gilbert to the New York Tribune. The sap wood of the yellow locust is not much good. The honey locust, like the hickory, has strong timber clear to the bark, at least in young trees. The honey locust is easier to start from the seed than the other. The nurseries sell the yearling plants for almost nothing; it has no borer that I know of; its tough limbs are not torn off by the wind; it seldom suckers, and is perhaps the hardier of the two. A butt I cut this fall has annual layers half an inch thick, and the wood is hard and heavy.

### A GREAT PIE APPLE.

We have recently mentioned the Ben Davis as a leading profitable orchard fruit, both at the West and the East. That veteran fruit grower of Missouri, Judge Samuel Miller, says of it, that, while not first rate in quality, the vigor, productiveness and early bearing of the tree render it safe to plant extensively. Even in England it is reported to give satisfaction. The fruit dried or evaporated is white and good; it makes excellent cider and is fine in apple butter. For pies it is a great favorite; a bakery in Chicago, which turns out 10,000 pies daily, uses the Ben Davis exclusively. Fruit of this tree grown on an upland, on trees not overloaded, is quite different from the product of over-loaded trees on bottom land.—Cultivator and Country Gentleman.

### A NEGLECTED BUT VALUABLE TREE.

The Forelle pear is seldom seen, but it has so many good qualities that it merits a much more general planting. It is called by the Germans, from whom we have it, Forellenbirne, i. e., Trout pear, because it is speckled like the brook trout. The pear is below medium in size, inclining to pyriform in shape. When fully ripe, it is of yellow lemon color, with a deep red cheek on the sunny side, marked with bright crimson specks. The tree is a good grower and a regular bearer. It is fine grained, buttery and melting in quality. It ripens late in October and with care may be kept until Christmas. With our modern cold storage facilities, there would not be the slightest trouble in prolonging its season until well along in January and perhaps later.—American Agriculturist.

### THE BEECH AS A ROADSIDE TREE.

Nurserymen propagate and transplant beech trees in large numbers without experiencing any great difficulty in making them grow. The transplanting, however, is usually done while the trees are small, or from five to eight feet high, for larger specimens are rather difficult to handle, owing to their widespread roots. We certainly do not know of any good reason for the almost general neglect of the American beech, for it is surely one of our most beautiful and graceful trees, and so hardy that it thrives even far beyond the limits of our territory to the northward. Small trees found in open woods and fields may be transplanted by giving a little care to the preservation of the roots, and then severely pruning the branches before or as soon as planted. The trees selected for street, roadsides and parks are mainly the choice of nurserymen who have a stock of the quick-growing and cheapest kinds. If the beech, chestnut, walnut and hickory were planted in the streets and parks of our cities their nuts, when ripe and falling, would be a great temptation to the small boy and his sister, and this would never do in this age of high moral culture in cities. We advise you to plant a row of beech trees, and then enjoy thinking what a good time the children of the neighborhood will have a few years hence gathering the delicious nuts.—New York Sun.

### DYEING AND COLORING SHEEP PELTS.

A correspondent asks how to cleanse and color sheep pelts for rugs. The following directions for tanning and cleansing are as good as any and are also the least troublesome way. Make a strong lather with soft soap and hot water, and let it stand till cold. Wash the sheepskin in it, carefully squeeze out all dirt from the wool. Wash in cold water till all the soap is out. Dissolve one pound each of salt and alum in two gallons of hot water, put the skin into a tub and pour the liquid over it. If not sufficient to cover, add more hot water. Let soak for twelve hours, then hang on a pole to drip. When well drained, stretch carefully on a board to dry, and stretch several times while drying. Before quite dry, sprinkle on the flesh side one ounce each of powdered alum and saltpeter, rubbing it in well. If the wool is not firm on the skin, let the skin remain a couple of days, then rub again with alum. Fold the flesh sides together and hang in the shade two or three days, turning over each day till quite dry. Scrape the flesh side well with a dull knife and rub well with pumice or rotten stone to make the skin soft. When used for mats or rugs they do quite as well if a little hard, unless you want to sew the

skins together, when they should be soft.

Several skins may be sewed together to make large rugs. Woodchuck, skunk, cat and calfskins may be tanned by the same process as for sheep pelts. For coloring use diamond dyes. Sew a loop of strong cloth onto each corner of the pelt; prepare your dye in a shallow vat or pan that has a large surface, have the dye hot and the wool damp, let two persons stand opposite each other, each holding two corners of the pelt by the cloth loops, and dip the wool side into the dye bath, moving gently till all parts are colored alike. Rinse in the same manner, this prevents coloring or injuring the skins. Wool carriage mats are easily re-dyed in the same manner as the sheep pelts. When the wool is dry card it until it is smooth and fluffy.—New England Homestead.

### THE COLOR OF HORSES.

W. H. Hawkes writes to the Australasian as follows on that vexed question, the color of horses: "It is an old saying among horse men, 'a good horse was never a bad color,' and yet popular prejudice assigns all sorts of good or evil traits of character to particular colors. I can quite understand this with those who do not know better; but that an expert, like an Indian buyer, should hold to the popular fallacy is almost beyond belief, seeing that we have had innumerable instances, both in the old country and here, to the contrary. It was recently that some four or five races were won in one day upon one of our local courses by chestnuts, and I think the fact was mentioned by one of our contributors, and they are equally good either in saddle or harness. Yet there are numbers who will condemn a chestnut at once for his color only, be he ever so perfect in every other respect. The objection to a gray one can understand from a groom's point of view, seeing that they are so difficult to keep free from strains as age whitens their coats, but for no lack of good constitution or disposition. "Some will tell you that a roan is the hardest of all horses, and yet I venture to assert that a greater portion of aged roans does not exist. Others credit black horses with being allied to Dragoon's himself for temper and untrustworthiness. The only objection to him is that he is very rusty in his winter garb. "White legs are always a sign of weakness," you are told by many. But I think three to one would be fair betting against the one white leg out of a set of four, the others being black. What about Old Stockings and All Fours? Surely if white legs were a sign of weakness, such horses should break down at a very early stage of their career. Most judges prefer bays with black points, and it would be difficult to beat them for general appearance the year through, but I for one should certainly deny to them a monopoly of sound constitutions, tractability, intelligence, and all other virtues. I am quite with Mr. Basil Gray in his general remarks, but even he errs the other way, as he credits white legs with being indicative of some peculiar virtue—or, as he says, 'they always denote quality.' This I very much doubt. That skillful breaking and future wise education has most to do with the character and usefulness of a horse, as well as a man, irrespective of his color, can, I think, be accepted as a settled fact. Renfrew was a splendid tempered horse until teased to such an extent that he became a man-eater. Many a two-legged brother has had his character spoiled by those who should have helped to make him better. That horses, like men, have their temperaments goes without saying. That an eye for the beautiful leads fanciers to reject piebald, skewball, and horses with wall eyes and big blazes for hacks or carriage purposes is not to be wondered at. But that any should condemn many of our really beautiful chestnuts is an enigma. "The objection purely to color is, I think, much akin to the action of one who crosses himself when passing in the street a person with oblique vision."—Bell's London Messenger.

### FARM AND GARDEN NOTES.

Stallions are cheap. Developed speed is in demand. Brood mares are selling for a song. A sandy soil is the best location for a poultry yard. A few carrots or apples are excellent for horses. Muddy banyards are largely responsible for scratches. Why not cover the bits with smooth leather for winter use? Make the stable comfortable if you would keep down expenses. If a sheep is kept dry it will stand cold much better than heat. There is a profitable market for handsome, useful, half-bred hackneys. If orchards are to be made profitable, they must receive as good care as crops. Should you stop anywhere during the cold days don't forget to blanket the horse. Be careful not to feed the colts or horses dusty hay. The trouble can easily be remedied by shaking out the hay well and then dampening it.

### SCIENTIFIC AND INDUSTRIAL.

Electrical cranes are multiplying. In nearly all the arid land regions artesian wells can be obtained at a depth of from 300 to 600 feet. Half a teaspoonful of sugar scattered over a dying fire is better than kerosene and has no element of danger.

A monument to Dr. Charcot, the great hypnotist, is now an assured fact for Paris. The money for it has been raised.

Chicago clergymen have formed a club to instruct prospective missionaries in foreign languages by means of the phonograph.

Experts have made exhaustive tests, and have found it took no more power to haul the double truck car than the single truck car.

In the sugar corn the conversion of sugar into starch is arrested at a particular point in the growth; the grain does not fill out, and is consequently shriveled.

The British Medical Journal has caused some excitement by charging recent outbreaks of enteric fever among the wealthy classes of London to the eating of oysters.

Dr. Bertillon has struck a new idea in the identification of handwritings. It is based on the measurement beating of the pulse, which is said to have in everybody a different characteristic effect upon the handwriting.

Habitual arsenic eaters can offer take a dose of two grains with impunity, and it is curious that arsenic does not affect the mind in any way, like opium or other drugs, and never becomes a passion with its votaries.

Belgian scientific men propose to equip an antarctic expedition. It will leave in September, and be absent from eighteen to twenty months. It is to follow the route of the Jason east of Grahamland, and if it be found impossible to winter there, the time will be utilized in exploring the less known portions of the Indian Ocean.

According to a paper read before the Field Naturalists' Club in Edinburgh the British lion is not a myth like the fabled unicorn. He was a veritable native of the forests of ancient Britain. The modern lion could not face him. He wore a shaggy coat, of which the lion's mane of today is only a survival, and his skin was spotted.

The two eyes really see two objects. If the two forefingers be held, one at the distance of one foot, the other two feet in front of the eyes, and the former be looked at, two phantoms of the latter will be observed, one on each side. If the latter finger be regarded, two phantoms of the nearer finger will be observed, mounting guard, one on either side.

Dr. C. Born, a German physiologist, has just demonstrated the possibility of building up living animals from parts of several other animals. The experiments were made with tadpoles and other larva of amphibians. Each of these was cut in two, and different parts were placed together in various ways, when some of them united, the hinder parts more readily than the fore parts. Two hinder parts, one with and the other without a heart, united in twenty-four hours, and the monstrosity lived and grew for a week or more.

### Breathing Carbonic Acid.

It is well known that a very much larger proportion of carbonic acid than usually exists in the atmosphere can be inhaled with impunity, but only recently have we been aware of the large quantity that can be breathed without actual danger. Ordinary fresh air contains but four parts in 10,000, yet the carbonic acid has to reach three per cent. or 100 times the usual quantity before any difference is noticed in the respiration. As the percentage rises the person breathing it begins to pant, but with air containing as much as ten per cent. only a headache is produced, although the panting is violent. The actual danger point is not reached until the carbonic acid rises to eighteen per cent.

Foul air in a room where a number of persons are present is not dangerous on account of the carbonic acid it contains, but owing to a poisonous organic substance given off with the breath. Carbonic acid is not a direct poison, but when the danger point is reached the air can take none from the blood in the lungs, so that the fires of the human engine are extinguished by their own smoke, as it were. It is really wonderful what the human engine will endure, for a candle goes out when the oxygen in the air sinks to 18.5, instead of the usual twenty-one per cent., and the carbonic acid rises to 2.5.—Chambers's Journal.

### Misapplied Kindness.

Misapplied kindness is frequently more unpleasant than literal cruelty. Two women sat side by side in a Brookline car. They were strangers to each other, but one noticed that the other was having serious difficulty arranging a jacket she wore, and which fitted so tightly over her sleeves that it would neither come on nor off. "Permit me," said the other, and she pulled the jacket on one shoulder and jerked up the collar. Still the woman continued to struggle, so that the coat once more slipped down, whereupon the other hauled it into place again. "Now, if you'll turn round, I'll pull up the other side," she said to the wearer. "Thank you," returned the coated one; "if it's all the same to you, I'm trying to get this jacket off," and with a final pull off it came, while the woman who had tried to help her attempted to look out of the window with the air of one who had gotten enormously rich minding her own business.—Boston Home Journal.

### A SURGEON'S KNIFE

gives you a feeling of horror and dread. There is no longer necessity for its use in many diseases formerly regarded as incurable without cutting. The

### Triumph of Conservative Surgery

is well illustrated by the fact that

### RUPTURE

or Breach is now radically cured without the knife and without pain. Clumsy chafing trusses can be thrown away! They never cure but often induce inflammation, strangulation and death.

### TUMORS

Ovarian, Fibroid (Uterine) and many others, are now removed without the perils of cutting operations.

### PILE TUMORS

however large, other diseases of the lower bowels, are permanently cured without pain or resort to the knife.

### STONE

in the Bladder, no matter how large, is crushed, pulverized, washed out and perfectly removed without cutting.

### STRICTURE

of Urinary Passage is cured in hundreds of cases. For pamphlet, references and all particulars, send for free literature to The World's Dispensary Medical Association, 663 Main Street, Buffalo, N. Y.

### MOTHERS

and those soon to become mothers, should know that Dr. Pierce's Favorite Prescription is the best medicine for childbearing, its tortures, terrors and dangers to both mother and child, by aiding nature in preparing the system for parturition. Thereby "labor" and the period of confinement are greatly shortened. It also promotes the secretion of an abundance of nourishment for the child.

Mrs. DORA A. GUTHRIE, of Oakley, Oregon Co., Tenn., writes: "When I began taking Dr. Pierce's Favorite Prescription, I was not able to stand on my feet without suffering almost death. Now I do all my housework, washing, cooking, sewing and everything for my family of eight. I am stronger now than I have been in six years. Your 'Favorite Prescription' is the best I ever used. I never suffered so little with any of my children as I did with my last."

### Wellington's Funeral.

In the funeral procession of the Duke of Wellington twelve horses drew the car; these were covered from eyes to fetlocks in housings of black velvet, with black ostrich plumes upon their heads. The Duke's funeral was modeled upon the precedent of that of John Monk, first Duke of Albemarle, the only change in the trappings of the horses being that the animals were only plumed on the head, instead of carrying a second plume on the crupper, which, as the tail was hidden by the velvet clothing, had rather a ludicrous appearance. But in the funeral of the Duke of Albemarle led horses formed an important part of the procession.

"Mourning horses," as they were called, draped in black cloth and plumed, were distributed at intervals in the cortege. The "chief mourning horse" followed the standard of England. The funeral car was also followed by a cream-colored "horse of honor," with crimson caparisons, in the Duke of Wellington's funeral procession. The only led horse was his charger, not Copenhagen, but the animal which he was in the habit of riding in his last years. Yet the riderless steed, pacing behind its master's bier, awakened the emotions of the gazing thousands with an appeal more potent and direct than that of all the accumulated pomp which preceded it.—The Saturday Review.

### Old Soldiers in China.

Nowhere are old soldiers so distinguished as in China. In 1890 the Emperor Kiang Si issued a proclamation which read in part as follows: "To thank heaven that it has allowed us to reach the age of 20 years, we herewith raise all active soldiers of the eight banners of Manchuria and Mongolia to the rank of the nobility. To those who have passed the fiftieth, we give in addition a piece of silk, ten measures of rice, and ten pounds of meat. Those who have passed their 90th birthday are to receive double measure in each case." When the crack regiments of the Chinese army contain men almost a century old, it is not so difficult to understand the successes of the brave Japanese.

### How's This?

We offer One Hundred Dollars Reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. Cheney & Co., Props., Toledo, O. We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligation made by him.

Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system. Price, 75c. per bottle, sold by all Druggists. Testimonials free.

### Not an Experiment.

The use of Ripans' Tablets for headaches, dyspepsia and other stomach disorders is not an experiment but an assured success. They will do all that we say they will.

California has 2,000,000 fruit trees, according to recent estimates.

I use Piso's Cure for Consumption both in my family and practice.—Dr. G. W. PATTERSON, Inkster, Mich., November 5, 1891.

### Accept None of the Pretended Substitutes for Royal Baking Powder

BECAUSE inferior and cheaper made baking preparations are bought at wholesale at a price so much lower than ROYAL, some grocers are urging consumers to use them in place of the ROYAL at the same retail price.

If you desire to try any of the pretended substitutes for ROYAL BAKING POWDER bear in mind that they are all made from cheaper and inferior ingredients, and are not so great in leavening strength nor of equal money value. Pay the price of the ROYAL BAKING POWDER for the ROYAL only.

It is still more important, however, that ROYAL BAKING POWDER is purer and more wholesome, and makes better, finer, and more healthful food than any other baking powder or preparation.

ROYAL BAKING POWDER CO., 106 WALL ST., NEW-YORK.

### AGAIN IN USE.

### Adobe Houses Are Once More Being Built in the West.

It is a curious thing that adobe houses, the earliest type of houses known in this country, are again coming to be used, as several have been recently built in Colorado. Everybody who has ever seen a picture of a cliff-dweller's town or of a pueblo village knows what an adobe house is. The adobe house is made of a peculiar sticky mud and is always sun dried. The bricks vary in size and are generally about 4 inches deep, 6 inches wide and 16 inches in length, while the outer walls of the adobe building proper vary from 2 to 4 feet in thickness. One old mission in New Mexico boasts of an outer wall six feet in thickness.

Curiously enough, the exact recipe for mixing this adobe is held as a secret by the Mexicans and half-breeds. Not even have they disclosed the necessary amount of hay or straw to make up a perfect adobe brick. Mayhap the Egyptian told it to the Aztec and this wonderful race to the ancestors of the present. The building of an adobe house must necessarily be confined to the months between May and August, at least in Colorado, Arizona and New Mexico, for frost is death to the un-baked brick. The adobe is prepared in the old-fashioned way—that of treating—and when the mud is worked to the proper consistency by the nervous feet of the Mexican it is placed in molds of the required size. The mortar is also of mud, but dries quickly, and is as solid as modern cement. Wealthy

NEW ADOBE HOUSE AT COLORADO SPRINGS

people in the West have taken up the adobe and are building adobe houses and, if the fashion spreads, the time may yet come when the adobe dwelling will be the distinctive type of American architecture.

No Wonder.

When a man is informed there are triplets in his family, he can hardly believe his own census.—Richmond Dispatch.

No woman has a right to neglect her ordinary duties, which are important, to crochet things for a third cousin she does not see once a year.

The Populist.

Why shouldn't there be a third party? It is true they disturb the smooth running of the regular organizations and sometimes overturn elections, but what is popular is founded on merit. As for instance, among all the remedies used for sprains and bruises, St. Jacobs Oil is the best popular because it is known to be the best; hence it is the Populist in medicine. The more because it cures so promptly and surely. There is no tripping from sprain where this old remedy is used. It imparts new life and strength and the pain vanishes. Truly it is a Populist.

Straw plaiting gives employment to 6,000 women in Europe.

### SYRUP OF FIGS

### ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation. Syrup of Figs is the only remedy of its kind ever produced, pleasing to the taste and acceptable to the stomach, prompt in its action and truly beneficial in its effects, prepared only from the most healthy and agreeable substances, its many excellent qualities commend it to all and have made it the most popular remedy known.

Syrup of Figs is for sale in 50 cent bottles by all leading druggists. Any reliable druggist who may not have it on hand will procure it promptly for any one who wishes to try it. Do not accept any substitute.

### March April May

Are the Best Months in Which to Purify Your Blood

And the Best Blood Purifier is Hood's Sarsaparilla

Which Purifies, Vitalizes and Enriches the Blood

At this season everyone should take a good spring medicine. Your blood must be purified or you will be neglecting your health. There is a cry from Nature for help, and unless there is prompt and satisfactory response you will be liable to serious illness. This demand can only be met by the purifying, enriching and

### Blood-Vitalizing

elements to be found in Hood's Sarsaparilla. "My mother-in-law, Mrs. Elizabeth Wolfe, at the age of 73 years, was attacked with a violent form of salt rheum; it spread all over her body, and her hands and limbs were dreadful to look at. At the same time, my little daughter Clara, who was just one year old, was attacked by a similar disease, like scrofula. It appeared in

Largo Sores under each side of her neck; had the attendance of the family physician and other doctors for a long time, but seemed to grow worse. I read of many people cured of scrofula by Hood's Sarsaparilla. As soon as we gave Hood's Sarsaparilla to Clara, she began to get better, and before the first bottle was gone, the sores entirely healed up and there has never been any sign of the disease since. She is a

### Healthy Robust Child.

Her grandmother took Hood's Sarsaparilla at the same time, and the salt rheum disappeared in its violence and a perfect cure was soon effected. It took about three months for her cure, and she ascribes her good health and strength at her advanced age to Hood's Sarsaparilla. It has certainly been a Godsend to my family." Mrs. SOPHIA WOLFE, Zaleski, Ohio
