The Penalty of Bachelorhood. / In Corea every unmarried man is bonstdered a boy, though he should live to be a hindred years old. No matter what his age, he ranks below the young-est of the unmarried med, despite the fact, perhaps, of having lived long enough to be his father.

Forecasters. BUTME people are as influenced by the elec-tric currents of the atmosphere that they can foretell the coming of a thunderstorm with perfect accuracy, and others there are with merreasosamility that they are euro othersing neuralgia from a low and fretful state of the pervous aysters. Now why can't the latter be warned in time and know that an oance of pervention is worth a pound of cure? To ues 81. Jacobs Oil promptly will wurd off an attack, or if attacked, will promptly cure. Such people can do for themselves what others do from weather prophecies, heed the signals and save the wreek and disaster.

The water frame was the invention o Wright, English, in 1789.

Wright, English, in 1789. **3100 Keward. \$100.** The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to ture in all its disease in the second second second second medical fracterity. Catarrh being a constitu-tional disease, requires a constitutional tract-ment. Half V Catarrh Orne is taken internally. To second the system, thereby destroying the prime the system, thereby destroying the arit assisting nature in doing its work. The proprietors have some the marked boliang reary case that it fails to cure. Seed for list of testimonias. Address The Crustery Coo, Toledo, O. F. J. CHENEY & Co., Toledo, O.

to fail and run seaward as long as it may exist upon this carth. The blow Gun. The blow gun is one of the most re-markable savage devices in which com-pressed air is used as a motive force. The blow gun is a simple tube of cana-smoothly cleared of the joint partitions, through which light darts, feathered with a tuft of down, or pieces of pith, are propelled by the breath. The blow gun is used for killing birds and small animals. Frequently the arrows are poisoned, rendering the light dart effective on larger game. The chlef merit of the blow gun is the ac-curacy and the silence with which it may be employed. The penetration of the blow gut dart is greater than would be imagined. At the distance of fifty feet I have driven a blunt dart one-quarter of an inch into n pine plank. It is stated that the range of the blow gun is a tropical device, and may be looked for in regions where hamboo crane grows. Nevertheless, these tubes are often made of hard wood, single or of two pieces hollowed out and joined together. Frequently one tube is thrust inside of another to secure rigidity. The examination of may of these blow guns inspires a great respect for the ingenuity and me-chancial skill of the workers. The North American specimens are from che Cherokees, of the Carolinas from the Cherokees, of the Carolinas from chara and Costa Rica; from South America, several Amazon tribes from Evendor east and from British Gulana employ the blow gun. employ the blow gun. When Cromwell Was a Boy. Apopose of the statement that a man of Kent has in his possession the head of Oliver Cromwell, and that Mr. Hame Thornycroft has been studying it for the bust of the protector upon which he is engaged, the London correspondent of the Manchester Evening News says: "I have a dim recollection of being present at a rural fair long ngo, and a showman offered as his staple attrac-tion the skull of the renowned Oliver (Cromwell.' I padi up 2 pence, but a hypercritical visitor standing by drew the attention of the peripatetic genite-man to the obvious fact that the skull pertained to a rather small child. "That's Iright," was the indigmant re-tort; 'this is Oliver Cromwell's skull when he was a boy."—New York Mall and Experimentary of the servers.

Used Many Quill Pens. In 1768 27,000,000 quills were shipped from Russia and Poland to England, to say nothing of those which were sent to other countries.

"Best sarsaparillas." When you think of it how contradictory that term is. For there can be only **one** best in anything—one best sarsaparilla, as there is one highest mountain, one longest river, one deepest ocean. And that best sarsaparilla is——?... There's the rub! You can measure mountain height and ocean depth, but how test sarsaparilla? You could, if you were chemists. But then, do you need to test it? The World's Fair Committee tested it,—and thoroughly. They went behind the label on the bottle. What did this sarsaparilla test result in? Every make of sarsaparilla shut out of the Fair, except Ayer's. So it was that Ayer's was the only sarsaparilla admitted to the World's Fair. The committee found it the best. They had no room for anything that was not the best. And as the best, Ayer's Sarsaparilla received the medal and awards due its merits. Remember the word "best" is a bubble any breath can blow; but there are pins to prick such bubbles. Those others pricked the old ones. True, but Ayer's Sarsaparilla has the medal. The pin that scratches the medal proves it gold. The pin that pricks the bubble proves it wind. We point to medals, not bub-bles, when we say: The best sarsaparilla is Ayer's.

Harnessing the Sun. When we sit in front of a coal fire and enjoy its generous warmth, do we real-to that the heat and light of the burk-ing coal are really sunshine that has been stored up for ages? Such is the fact. Centuries ago the sun shone on the earth, the plants nul trees grew, eld, and grew again; they were cyver-ed by geologic déposité, and acted the gures of years and ages these broad avers of organic matter were trans-formed into coal. The coal thus repre-sents the work done by the sunshine rears ago, and when it is burned the implication disperse of energy. But boal is a wasteful source of energy. Even the best engines do not utilize over 10 per cent of the calculated ener-sy of the heat of coal. And, besides the, it is an incorventent thing in many ways; it has to be mined, freight-ed and stored. Can we not find some more economical way of using the sun's energy? AT THE GATE In the warm health-giving weather My poor pale wife and I Drive up and down the little town And the pleasant roads thereby: Out in the wholesome country We wind, from the main highway, In from the wood's grin solitudes— Fair as the Lord's own day.

and y ways, it has to be inited, it gives be and stored. Can we not find some more economical way of using the surfa-energy? During the last few years the great progress in electrical science has end-bled main to utilize the solar heat in a thriftier way. During its day's work the sun draws up a large amount of water from the oceans and damp earth. By the action of its rays plant life flour-ishes, and plants draw from the ground and evaporate into the air large amounts of water. Thus an oak tree of average size, with seven hundred thousand leaves, lifes from the earth into the air about one hundred and twenty-three tons of water during the five months it displays its follage. This evaporated water, sconer or later, fails as rain, and by the action of gravity begins to flow downward. Thus the great rivers are fed. Round and round incessantly goes the water lifted by the tireless cun to fall when deserted by him, and again to fall when deserted by him, and again to fall and run scaward as long as 4^o may exist upon this earth.

He was in a hurry to see her eyes when she opened it. The lecture was good, of course, but he should be glad when it was over. A bored sigh from the little maid echoed his ,wish. She was look-ing dully about the room again and, presently, her big brown eyes lit upon the young man who leaned back while the others leaned forward, and who looked upon her with friendly eyes while the others examined her sore foot. She returned his glance with grave scrutiny. He pleased her. He was good to look upon. He had a flower on his coat. Clearly this was something she did not expect among this crowd of ugly men. The little maid was unconsciously realizing the difference between a good-looking chap, with a good tailor and an eye for ties, and the student who is too absorbed to care what he has on. They looked steadily at each other, the young fellow with a smile on his lips and the child with pleased ap-preciation dawning in her eyes. Sud-denly she smile also. Then she laughed aloud. "Pretty man," she chuckled, point-ing with her chubby forefinger at the woll groomed youth. There was a roar from the class and the young fellow blashed a fiery red at the honors thrust upon him. The man next him grinned. "She recognizes you, Loggatt," he suid.

He was in a hurry to see her eyes when she opened it. The lecture was good, of course, but he should be glad when it was over. A bored sigh from the little maid echoed his , wish. She was look-ding dully about the room again and, presently, her big brown eyes lit upon her.

we whip Whip a poorly nourished horse when he is thoroughly tired. He may go faster for a few rods, but his condition is soon the worse for it. Betis soon the worse for it. Bet-ter stop and give him food. Food gives force. If you are thin, without appetite; pale, because of thin blood; and easily exhausted; why further weaken the body by applying the whip. Better begin on a more permanent basis. Take something which will build up the tissues and supply force to the muscular, digestive, and to the muscular, digestive, and

Scotts Emulsion

of Cod-liver Oil, with hypo-phosphites, meets every de-mand. The cod-liver oil is a food of great value. It pro-duces muscular, digestive, and nervous force without the aid of any whip. Every gain is a substantial one. The hypo-phosphites give strength and stability to the nervous sys-tem. The improved appetite, richer blood, and better flesh come to stay.

come to stay. just as good is never as good as

Scott's Emulsion.

The great success of the chocolate preparations of the house of Walter Baker & Co. (established in 1780) has led to the placing on the market many misleading and unscrupulous imitations of their name, labels, and wrappers. Walter Baker & Co. are the oldest and largest manu-facturers of pure and high-grade Coccas and Chocolates on this continent. No chemicals are used in their manufactures. Consumers should ask for, and be sure that they get, the genuine Walter Baker & Co.'s goods.
