Love and Death Broke His Vow.
For more than twenty years William
H. Jerolamen, of Morristown, N. J.,
was silent in his home, says an exchange. He made a vow and kept it
until death faced him. Then he broke

LIEN ON FALSE TEETH.

A Dentist Thinks His Work as Good
as That of a Carpenter.

"Say," he said, as he broke ruthlessi,
into a lawyer's office, "I've got a jofor you."

trifling quarrel, he said to his wife: "T'll never speak to you again as long as I live." At that time he was 58 years old. He kept his vow and lived on, utterly agnoring the woman who had shared his joys and sorrows so long. They lived ha a cottage at Mount Arlington, Morris County; but, as far as Jerolamen was concerned, it was as if his wife was not living.

She bore the slight without a murmur. He dined in silence and alone, and so did she. Often Mrs. Jerolamen had to speak to her husband in reference to household affairs, but he never answered.

times. She did not leave him until the end came. He died with his hand in hers and a look of happiness that his face had not borne in twenty years.

How to Wash With Care.

Hard water, strong lye, or inferior laundry soap are responsible for the yellow clothes seen in many housesholds. To wash property, fill a tub nearly full of hot water, put the white clothes in first, rub with Ivory Soap, scald, rinse and starch. When dry, sprinkle and fold down over night and iron carefully. Eliza R. Parker.

For asthma, bronchitis, croup, or whooping cough, there is no remedy so sure and so safe as Ayer's Cherry Pectoral.

This standard remedy for coughs, colds, and all diseases of the throat and lungs, is now put up in half size bottles at

Cherry Pectoral. HOUSEHOLD AFFAIRS.

HOUSEHOLD AFFAIRS.

To stuff a Fowl.

For the stuffing of a six-pound fowl me a quart of stale crumbs of bread rubbed into fine crumbs and seasoned with a tablespoonful of selfit, a scant teaspoonful of pepper, one each of summer savory and chopped parsley, and half a one of powdered sage. Rub half a cupful of butter lightly through the bread crumbs. Fill the bowlwith this stuffing at the vent and crop and truss it into shape. Rub it rather thickly with butter, dredge it thickly with flour, and roast it on a rack in a hot oven or in a roaster. It will require two hours roasting if it weighs six pounds. Baste it every fifteen minutes with the liquid in the pan, and dredge it lightly with flour and a mere dash of salt and pepper.

To make the giblet gravy place in a quart of water the neck and tips of the wings, which are usually trimmed off; the skinned legs, the heart, the liver and gizzard, and let them simmer while the fowl is roasting. When the liquid is done it will be reduced in quantity about one-half. Strain this in the dripping pan after the fowl has been removed and add it to the giblet water.

All the giblets except the liver are

Preparations of Tripe.

Tripe is inexpensive, nutritious and easily digested. Though it has been spoken of as "the poor relation of the meat family," it is as acceptable as beef-steak to many people, and is a favorite breakfast dish with the English. When it comes from the butcher's it is boiled or pickled. Soak it in salt and water, wash it thoroughly, then simmer until tender. After it is cold, it may be prepared in various ways. Plain tripe needs more cooking than the honey comb variety.

Tripe Fried in Batter. Make a bat.

seeds more cooking than the honey comb variety.

Tripe Fried in Batter—Make a butter by mixing gradually one cup of sweet milk with one cup of flour, half a teaspoonful of baking powder, the same amount of salt, and one well-beaten egg. Dip the pieces of prepared tripe in this batter and fry them to a nice brown in hot fat.

Lyonnaise Tripe—Cut the tripe into narrow strips or small squares. Put two tablespoonfuls of butter and two spider, and, as soon as the onion begins to brown, add the tripe and a desert-spoonful of vinegar. Stir the tripe lightly till it is of a delicate brown, season with salt and a dash of paprika, turn it into the center of a not platter, and sprinkle chopped parsley over it. Garnish with triangles of lemon.

Pickled Tripe—Boil in a preserving kettle three cups of vinegar, an onion out into quarters, half a teaspoonful of alt, two dozen allspice seeds, a dozen and a half of whole cloves, and a couple of blades of mace. Cut cold boiled tripe into medum-sized pieces and put them in a stone crock. Pour over the boiled liquid, using enough to cover the tripe well. Keep the crock covered and in a cool place. The tripe will stay in good condition for several weeks.

Tripe With Cream Sauce—Put into a double boiler one cup of milk and a blade of mace. When the milk is boiling, add a teaspoonful of butter mixed with the same amount of flour, and cook till the flour begins to thicken. Take out the mace, and add the tripe cut into small pieces. Sir the beaten yolk of an egg into a cup of cream, and add to the mixture. Season quickly with salt, add a little pepper, serve in heated dish with buttered toast, and with chopped parsley over the top.

Southern Tripe—Put into a spider a piece of butter the size of a small egg, and when the butter is melted, add an onion cut into small pieces and cook until the onion is browned; then stir in a spoonful of flour. Gradually add a cup of stock and one of stewed tomatoes. Add the tripe cut into small pieces, sprinkle them with salt and pepper, and dip them into

AGRICULTURAL TOPICS.

A Poultry Culture Truism.

Never forget this in poultry culture:
The pullet that commences to lay
arliest in life is the one to lay the
largest number of eggs through life,
as cattle that have the milk-producing
organs active early make the best cows.
Select the fast-growing, early maturing specimens that present the full
type and size found in the breed; and
ase only these as breeders, and the
egg-producing merits will be inreased. We have reported the wonderful product in single specimens,
which can be made true to a flook.
But it is care and attention to the flock
that finds and secures these merits in
the progeny. Neglect and haphazard
breeding never pays.

Enslage For Hogs.

the progeny. Neglect and haphazard breeding never pays.

After numerous experiments in feeding silage to hogs, the Virginia station finds that its use as an exclusive swine ration is not to be commended. The hogs did not gain as rapidly as on a corn ration. So far as the cost of food is concerned, if thirty-five cents is allowed for a bushel of ear corn (the price it sold for during the test) and \$2 per ton for silage, it may be seen that the latter cost only about two-thirds as much for the seven weeks as the corn, and this would go a long way toward making up the difference in loss of flesh. When fed with corn the results were more satisfactory. Giving the above values to the feeds, a saving of nearly one-third in cost is effected. The station concludes that as hog feed silage can be sconomically combined with corn as a maintenance ration, but it is not desirable when used alone. In feeding the silage it was found best to throw it directly on the ground, for if placed in troughs much of it was thrown out, as the hogs sought for pieces of corn, and being in a confined place the finer parts were trampled under foot in a very short time. If spread about over the soil they were kept busy picking it over.—American Agriculturist.

Winter Fattening of Sheep.
With grain and store sheep at pres-

the soil they were kept busy picking it over.—American Agriculturist.

Winter Fattening of Sheep.

With grain and store sheep at present prices, it may seem doubtful whether there will be much profit in feeding sheep or lambs the coming winter. Yet it was the experience of John Johnson that he was quite as sure of making a profit in such years as in times when sheep and feed were cheap and plentiful. In such a year as the present, however, he always preferred to feed yearling lambs, buying some of coarse wool origin if he could, and both thrifty and hearty eaters. It never pays to fatten a poor sheep. One that shows that it has never had any sethacks is much to be preferred. It will eat more heartily, and will often lay on four or five pounds of flesh a week, while the older sheep will do well if it gains two pounds a week. There is a higher price for the yearling lamb after it is fattened, so that this with the gain in flesh and the increased value of its wool makes lamb feeding nearly always profitable. An old sheep feeder who had practiced winter fattening of lambs, once told us that he never but once failed to make a profit money, and even then he got full pay for all the feed given at market rates, and also a pile of very rich manure as the result of his winter's work.—Boston Cultivator.

Fall Pruning of Grapevines.

Cultivator.

Fall Pruning of Grapevines.

For many reasons the heavy annual pruning which is a necessity for the grapevine had best be given in the fall. So soon as the leaves are off, the cutting away of superfluous wood may remain. There can be no bleeding, as the cut will dry up at once. There is some circulation of sap all through the vine during warm weather in winter. Pruning in the fall concentrates this sap in the buds that are left, and they always push more vigorously than when the vines are left dangling on the trulises all winter. As soon as the pruning is done, the support of the main vine should be loosened, and it should be thrown on the ground. In most cases snow will be enough protection, but if the vine is where the snow blows away, some straw held down by a slight covering of earth will be needed. Vines thus treated will winter without injury, however low the mercury may fall. The vines a chould be put up on the trellis in spring so soon as danger from late frosts has passed. If the vines are uncovered except by snow, put them up as soon as the snow melts. Lying on the ground and protected from winds, the buds might push too early and be injured. They are not liable to this on the trellis.—American Cultivator.

Scarcely two years had passed away when a brig sent out by France to revisit her possessions found her way to Falcon Island. It had again disappeared, it being simply a reef dangerous to navigation. Whereupon France was obliged to give up all rights of possession.—New York Herald,

A citizen just returned from Paris describes a very ingenious device that has been adopted there for use in cabs. It is a register that indicates the exact distance, automatically, the cab travels on a trip, and at the end displays the amount of the legal fare for that distance for the information of the passenger.

France was obliged to give up all rights of possession.—New York Herald.

The Fowers of Liquid Air.

A tablespoonful of liquid air poured on about a fluid onne of whiskey will freeze it at once into flat scales, giving the whole the appearance and color of cyanide of potassium. This may be emptied out on a table, and will remain frozen in that condition for fully five minutes. One thing that impresses one is that while all molecular motion is practically arrested at this temperature, the odor is perfectly distinct, showing that these particles which stimulate the sense of smell are active and independent of the temperature. A handkerchief of either silk, linen or cotton, saturated with the liquid, will be charred and destroyed just the same as if it was be carried about for a number of hours in an open vessel without entirely disappearing. It probably represents a compression of about seven hundred atmospheres, and would, therefore, in a confined space and at 60 degrees temperature, represent a pressure of somewhere from ten to treated and date of the control of the strong, coarse, jagged teeth, and more strongly resembles a coarse, rough them have been cut from the head and has not been misplaced, it remains in its original position. Cheap Electric Light.

In spite of the fact that Chicago is generally associated with the idea of municipal ownership in the consideration of all questions of public lighting, it is a fact that the city depends upon central station companies for considerable current to operate street lights, particularly in the southern part of the city. Two of the companies, the People's Electric Light and Power company, have been engaged in a spirited rate-cutting war for some time, and wherever the lines of both companies were to be found the people secured their service at a very small cost. The city controller, becoming cognizant of this fact, determined to secure some advantage for the city, and he has accordingly asked both companies to bid upon the city lighting for the district which they occupy.—Western Electrician.

A Great Authority on Evolution.
There is a sketch of "A Great Naturalist," the late Edward Drinker Cope, in the Century. It is written by Henry Fairfield Osborn. Prof. Osborn says: His pioneer exploration came early in the age of Darwinism, when missing links, not only in the human ancestry, but in the greater chain of backboned animals, were at the highest premium. Thus he was fortunate in recording the discovery in northwestern New Mexico of by far the oldest quadrupeds known, in finding among these the most venerable monkey, in describing to the world hundreds of links—In fact, whole chains—of descent between the most ancient quadrupeds and what we please to call the higher types, especially the horses, camels, tapirs, dogs and cats. He labored successfully to connect the reptiles with the amphibians, and the latter with the fishes, and was a quick as a flash to detect in the paper of another author the oversight of some long-sought link which he had been awaiting. Thus in losing him we havelost our ablest and most discerning critic. No one has made such profuse and overwhelming demonstration of the actual historical working of the
