New Use for Peanuts

New Use for Peanuts.

A new use for peanut is developing as the peanut butter industry becomes better understood. The product of the peanut answers in the place of ordinary butter for the table use, and is said to be excellent for shortening purposes, and for gravies, sauces, etc. In point of purity it is well designed for the use of vegetarians who strenuously object to anything animal. There is already a considerable demand for this butter substitute, and it is very probable there will be an enlarged market for the nuts. At present the product of the United States is about 500,000 bags annually, and that of the world is 600,000,000 pounds.—West Coast Trade.

A Chinese Typewriter.

A missionary at Tung Chow has invented a Chinese typewriting machine. The characters number about four thousand, and are on the edge of wheels about a foot in diameter. Twenty or thirty wheels are required to carry all the characters, and two keys must be struck to make an impression. The first turns the wheel, and the second stops it at the required letter, which is then brought down to the paper. The machine is complicated, but the inventor (Dr. Sheffield) hopes to make it more simple. There are 18,000 characters in the Chinese language, each representing a distinct word. The 4,000 in common use have been selected for the new machine.

RELIEF FROM PAIN.

Women Everywhere Express their Gratitude to Mrs. Pinkham.

The. T. A. WALDEN, dibson, Ga., writes:
"Dear Miss. Pinkinam:—Before taking your medicine, life was a burden to me. I never saw a well day. At may monthly period I suffered untold misery, and a great deal of the time I was troubled with a severe pain in my side. Before finishing the first bottle of your Vegetable Compound. I could tell it was doing me good. I continued its use, also used the Liver Pills and Sanative Wash, and have been greatly helped. I would like to have you use my letter for the benefit of others."

Trs. FLORENCE A. WOLFE, 515 Tulberry 51., Lancaster, Ohlo, writes:

"DEAR Miss. PIXKIAM:—For two years I was troubled with what the local physicians told me was inflammation of the womb. Every month I suffered terribly. I had taken enough medicine from the doctors to cure anyone, but obtained relief for a short time only. At last I concluded to write to you in regard to my case, and can say that by following your advice I am now pefectly well."

Ars. W. R. BATES, Annshield, La., writes:
"Before writing to you I suffered dreadfully from painful menstruation, leucorrhoa and sore feeling in the lower part of the bowels. Now my friends want to know what makes me look so well. I do not hesitate one minte in telling them what has brought about this great change. I cannot praise Lydia E. Pinkham's Vegetable Compound enough. It is the greatest remedy of the age."

De la Gironniere, Whom Dumas Once Described as a Phanton, Went to Manials, Founded a Colony, Subdued Hirates and Married a Creole Beauty.

About the middle of the present century, when Dumas the elder was at the height of his career, and the origin of many an interesting piece of French literature was delightfully uncertain, a couple of works appeared that drew attention to the mysterious and far-off Philippines. In his "Thousand and One Phantoms," issued serially in the Constitutionnel, Dumas made free with a fellow countryman who had been the hero of certain surprising adventures in the Pearl of the Orient, and then hero of certain surprising adventures in the Pearl of the Orient, and the hero of certain surprising adventures in the Pearl of the Orient, and the hero of certain surprising affective as a phantom in a feuilleton, got out his "Adventures of a Gentleman of Brittany in the Philippines." Some persons, however, thought the hero would have been truer to life as the creation of Dumas; that as a real gentleman of Brittany he was only another living liar, and that, in fact, his romantic narrative was the work of a new Selkirk and Defoe combination.

Paul Proust de la Gironniere was counted in the pedigree of an ancient Piedmontese family that came over the St. Bernard and into Brittany in the days of Louis XIV., and soon became rich enough to have access to the nobility and to contract "the most fattering alliances." Paul's father was born at Nantes; here of land owned by his wife. Paul's mother gave the boys such education as she could, and then they went to seek their fortune. One died in Madagascar; another returned to Porto Rico to die in his mother's arms; the husband of one of Paul's sisters died in Mauritius, and another brother died while visiting Paul in the Philippines.

Paul was born at Nantes; he studied medicine; and thence, a merestripling, he sailed as ship's surgeon to the Far East, embarking for the fourth time on October 9, 1819, and casting anchor about the end of May, 1820, in the Bay

ally allowed his ship to go home and leave him in the metropolis of the archipelago.

He had resolved to become a resident physician. He faced the fanaticism of the cholera massacre of 1820, and he had a clean shirt in his hat and a dollar in his pocket. Finding a rich old don nearly blind, he cured one eye and made a glass ball for the socket of the otber, and his reputation was established. Paul became Dr. Pablo, and surgeon of a regiment of regulars and of a battalion of militia. But when the leaders of the Novalles rebellion of 1823 were shot, he had occasion to call a Spanish informer a coward, and some time thereafter, having words with the Governor-General over a question of ethics, he resigned and was thenceforth a sort of surgical free lance to the people of Luzon.

The travels of La Gironniere in the

entered into with American manufacturers.

Many manufacturers are using X-rays to test coal that they use in their operations, it having been found that by turning the rays on coal it can be told how much of it will remain as ashes after it is burned and how much will scape as gas.

Cloth is now being made from wood. Strips of fine-grained wood are boiled and crushed between rollers, and the filaments, having been carded into parallel lines, are spun into threads, from which the cloth can be woven in the usual way.

having words with the Governor-General over a question of ethics, he resigned and was theneforth a sort of surgical free lance to the people of Luzon.

The travels of La Gironniere in the island, though undertaken incidentally to professional daty or out of mec curiosity or a desire to go somewhere, are scientifically interesting, and will be as important to the historian as many of the manuscript accounts that are rolled up in the cloistral archives. He explored caves, lakes, mountain fastnesses and immense forests; slept in treetops and on the tidal sand; learned the ways of the tribes and gathered legonds; attended the Tinguian brainfeast; sketched the interior of Igorrot Ints and carried off the skeleton of a Negro woman.

La Gironniere's most valuable contribution to the civilization of the island was his colony of Jala-Jala. Before his resignation had been accepted, Sonor Pablo, who was known among the natives as Malamit Oulou, or 'Cool Head,' had secured of the Minister of Finance a site for a model farm in the mountainous peninsula that extends southward into the beattiful Lake of Bay at the head of the Minister of Spain's existing the properous and ordinal that extends southward into the beattiful Lake of Bay at the lead of the Minister of Spain's existing the properous and ordinal that extends southward into the beattiful Lake of Bay at the lead of the Minister of Spain's existing the properous and collection of Spain's existed and minimal that extends southward into the beattiful Each of the comment of Spain's existing the properous and collection of Spain's existed and minimal that extends southward into the beattiful Each of Spain's existed the properous and labarity and the mountain of the strain of the properous and collection of the strain of the properous and collectio rom which the cloth can be woven in the usual way.

"A whole guide-book devoted simply to the Hermitage could give no sort of idea of the barbaric splendor of its belongings," writes Lilian Bell, of the famous St. Petersburg Museum, in the Ladies' Home Journal. "Its riches are beyond belief. Even the presents given by the Emir of Bokhara to the Czar are splendid enough to dazzle one like a realization of the Arabian Nights. But to see the most valuable of all, which are kept in the Emperor's private vaults, is to be reduced to a state of bewilderment bordering on idioey. It is astonishing enough, to one who has bought even one Russian belt set with turquoise enamel, to think of all the trappings of a horse—bit, bridle, saddle-girth, saddle-cloth and all—made of cloth of gold and set in solid turquoise enamel, with the sword hilt, scabbard, belts and pistol handle and holster made of the same. Well, these are there by the roomful. Then you come to the private jewels, and you see all these same accontrements made of precious ctones—one of solid diamonds; another of diamonds, emeralds, topazes and rubies."

Americans Shut Out of the Philippines.

Oldest Postmistress in the World.

Mrs. Brown, of Auchmithic, England, was said to be the oldest postmistress in the world. She died recently at the advanced age of ninety-three. Her appointment took place after the penny post was organized, and she was able to perform her dulies until a short time beforeher death.

Patriotic Dress Goods.

Bunting is the popular fabric for dresses, being light and suitable for wear in any weather, although, of course, the chief reason is that it is generally used for patriotic purposes. The material used in dresses is woven exactly as that for flags. The color in most demand is blue; army and any being the shades most used.

A Remedy For the Telltale Wrinkles.

navy being the shades most used.

A Remedy For the Telltale Wrinkles.

When fine lines begin to show under the eyes. procure a small package of fullers' earth and mix it with an equal quantity of wheat flour. Take a little of this and mix it into a paste with clear water. Spread it beneath the eyes and let it remain an hour, then moisten it and gently wipe it off. For wrinkles on other parts of the face make a paste of white wax and oil of sweet almonds, and apply it as hot as can be borne, using a small pine stick for the purpose, that it may be applied to the line and nowhere clse.

—Woman's Home Companion.

Woman's Home Companion.

Feathers in Outing Hats.
Fashion decrees that feathers shall be worn in outing hats. Those for general wear, bicycling, golf and even sailor hats are trimmed with wings and quills. But the more clegant headdress for wear on strolls is decorated with ostrich feathers. The plumes often have an addition of little tassels of plain black silk, and flat velvet spots are placed on white feathers. Often the milliners go so far as to renounce curling altogether, as they are supposed to show to better advantage the quality of the feather if plain. White plumes are the most used. They are frequently shaded or laid over colored ones.

The Corsage Sachet.

The Corsage Sachet.

One of the prettiest conceits in feminine fancies is a butterfly of white bolting cloth, embroidered in the most claborate pattern. It was sent to a recent bride and the sender declares she traced the design from the wings of a very gorgeous butterfly her small brother made a captive. Certainly no artist could have devised one more odd or more beautiful.

The scalloped wings are padded just a trifle, the sachet is put in, and the wings outlined with a double row of narrow Valenciennes lace. The whole is outlined with pihk silk. It is to be pinned on the left side of the corsage, and gives the wearer a subtle perfume that is very fascinating.

The Baby's Sweater.

The latest addition to baby's wardrobe is a little white sweater, an exact copy of his athletic father's or golfing mother's. Such sweaters have been sold for some time for children of three years old and upward, but the baby sweaters are something entirely new.

They are very useful little things, and, being made of the fluest, softest wool, are a great addition to baby's wardrobe. They can be tucked under the ruffled pillow of the baby carriage, and at any sudden change in temperature can be slipped on easily and without much detriment to the lace trimmed ruffles, and baby can be wheeled home without the danger of catching cold. Being all in one piece, with no opening except for the head, they will not fall open at the neck and expose baby to the dangers of bronchitis or laryngitis.

The Chic Thing in Beltz.

expose baby to the dangers of bronchitis or laryngitis.

The Chie Thing in Belts.

Belts not only share honors with dress accessories for this summer's wear, but seem to claim more attention than the gown itself. We all wear belts, be we start or lean, short or tall, and no one seems to question their becomingness. Jeweled belts have had such a long run, and are now made in such cheap imitations, that the belts of leather and plain metal are more used by women who must have something new. The old-time belting of colored silk in white, black and all the pretty shades of color are now again in vogue, and are simply fastened in front with a clasp. Just at this time, when war is the talk of the day, the leather belt with a clasp in military style is quite the thing for the summer girl. It is usually quite large, and, if possible, must have a history of other war-days.—Woman's Home Companien.
