the iron nor being affected by it. Untangling Legislation on Patents. A measure of vast importance to the manufacturing and commercial inter-eats of the United States is the act of congress authorizing the president to appoint a commission to ravise and mend the laws concerning patents, trade marks, and trade and commer-sial names. The laws, as they exist, are inadequate to the conditions of the lay. They are too complex, contra-lictory, and susceptible of great fraud. The United States courts, in deciding rauses on the laws concerning patents, have unintentionally done much to ren-der "confusion worse confounded.". It is to be hoped that the commission will stamp with its strongest disapproval the use of "Old Glory" and the Gen-eva Cross for purely business advan-tages. These symbols are almost sa-cred. Novel Way to Clean Machinery

Novel Way to Clean Machinery. The practice of cleaning machinery by means of blotting paper has been established in German workshops. The German workman formerly received on an average 250 grams of cotton waste, one new sponge cloth and one or two renovated ones per week; now he is supplied with 150 grams of cotton waste and eight to ten sheets of blot-ting paper, at a cost of 2½ cents, The paper is not only cheaper, but it can not soil the machine with fibers and dust, like sponge cloth and woolen ref-use, and it is far preferable to cotton waste. Beyond this, it is not so com-bustible as other cleaning materials. Electricity Killing Off Flies.

bustible as other cleaning materials. Electricity Killing Off Flies. Entomologists report that of late years the annual crop of flies is de-creasing rapidly and steadily. The al-most universal adoption of cleatric traction is credited with bringing about this desirable result. It has been stated that stables are the chief bread-ing places for flies, and as the street car horse has been emancipated, the number of stables is growing less, hence the failure of the fly to be born in multitudes as in the past.
