

"Pride Goeth Before a Fall."

Some proud people think they are strong, ridicule the idea of disease, neglect health, let the blood run down, and stomach, kidneys and liver become deranged. Take Hood's Sarsaparilla and you will prevent the fall and save your pride.

Hood's Sarsaparilla
Never Disappoints

That football is not losing its popularity in England is shown by the fact that the match for the English football cup at Sheffield on April 15 was witnessed by upward of 60,000 persons.

Don't Tobacco Spit and Smoke Your Life Away.
To quit tobacco easily and forever, be magnetic, full of life, nerve and vigor, take No-To-Bac, the wonder-worker, that makes weak men strong. All druggists sell it. Cures guaranteed. Booklet and sample free. Address: Sterling Remedy Co., Chicago or New York.

Potato bread is used by the natives of Thuringia to feed their horses especially when they are worked hard in very cold weather. The animals thrive on it, and their health and strength are excellent.

To Cure Constipation Forever.
Take Cascarets Candy Cathartic. 10c or 50c. If C. C. C. fail to cure, druggists refund money.

Alonzo Cresswell, an Ebersburg (Pa.) boy who is a crack shot, killed a large bald eagle at the Evans (sawyer) dam April 15. The bird's wings, from tip to tip measured five feet two inches.

Do Your Feet Ache and Burn?
Shake into your shoes Allen's Foot-Ease, a powder for the feet. It makes Tight or New Shoes feel Easy. Cures Corns, Bunions, Swollen, Hot, Callous, Aching and Sweating Feet. Sold by all Druggists, Grocers and Shoe Stores. 25c. Sample sent FREE. Address Allen S. Olmsted, Lenoir, N. Y.

Los Angeles draws its electricity from a turbulent mountain river ninety miles away. The 12,000 horse-power runs street cars and machinery and supplies the city with light and heat.

No-To-Bac for Fifty Cents.
Guaranteed tobacco habit cure, makes weak men strong, blood pure. 50c. All druggists.

Sarah Bernhardt, and came very near to being sent to a shop to learn the trade.

Hall's Catarrh Cure is a liquid and is taken internally, and acts directly on the blood and mucous surfaces of the system. Write for testimonials free. Manufactured by F. J. CHERRY & Co., Toledo, O.

I believe Piso's Cure for Consumption saved my boy's life last summer. Mrs. ALICE DODD, Le Roy, Mich., Oct. 20, 1898.

Fits permanently cured. No fits or nervousness after first day's use. Dr. Kline's Great Nerve Restorer. 25c. Trial bottles and postage free. Dr. R. H. KLINE, Ltd., 521 Arch St., Phila., Pa.

Mrs. Winslow's Soothing Syrup for children teething, softens the gums, reduces inflammation, allays pain, cures wind colic. 25c a bottle.

MAGNITUDE

Of the Fishing Interest in Four Eastern States.

New York Evening Post: The magnitude of the fishing interests of Maryland, Virginia, Delaware and Pennsylvania appears in the facts stated in a bulletin recently issued by the United States Commissioner of Fish and Fisheries. In Maryland the industry gives employment to 42,312 persons, exclusive of those engaged in canneries, packing houses, transportation, boat building, making nets, and other implements. The total amount invested in property used in taking fish and oysters in Maryland waters is \$5,821,610. Virginia employs 28,216 persons and has \$2,891,536 invested in the business. The value of the product in Maryland in 1897, including 7,254,934 bushels of oysters, was \$3,617,308, and in Virginia \$3,167,566. In Maryland 17,139,459 pounds of alewives were caught, 1,321,280 pounds of perch, 5,799,563 pounds of shad, and 9,500,000 pounds of crabs. The largest item in the Virginia catch was 178,656,362 pounds of menhaden. The Delaware and Pennsylvania fisheries are naturally smaller in extent, but the investments of the latter amount to \$1,601,628, and of the former \$407,469.

Three pints of liquid a day is sufficient for the average adult.

A Happy Mother's Gratitude

[LETTER TO MRS. PINKHAM NO. 46,781]

"DEAR MRS. PINKHAM—I have many, many thanks to give you for what your Vegetable Compound has done for me. After first confinement I was sick for nine years with prolapsus of the womb, had pain in left side, in small of back, a great deal of headache, palpitation of heart and leucorrhoea. I felt so weak and tired that I could not do my work. I became pregnant again and took your Compound all through, and now have a sweet baby girl. I never before had such an easy time during labor, and I feel it was due to Lydia E. Pinkham's Vegetable Compound. I am now able to do my work and feel better than I have for years. I cannot thank you enough."—Mrs. ED. ENLINGER, DEVINE, TEX.

Wonderfully Strengthened.

"I have been taking Lydia E. Pinkham's Vegetable Compound, Blood Purifier and Liver Pills and feel wonderfully strengthened. Before using your remedies I was in a terrible state; felt like fainting every little while. I thought I must surely die. But now, thanks to your remedies, those feelings are all gone."—Mrs. EMILIE SCHNEIDER, 1244 HELEN AVE., DETROIT MICH.

WANTED—Case of bad health that R-I-P-A-N-S will not benefit. Send 6c. to Ripans-N-S Co., New York, for 10 samples and 100 testimonials.

THE TWELFTH CENSUS.

THERE ARE REALLY TO BE TWO COUNTS OF THE POPULATION.

The Preparations Now Making in Washington for the Stupendous Work—Some of the Questions—An Army of Employees Needed.

WASHINGTON, D. C.—The Government is getting ready to spend \$8,000,000 or \$9,000,000 on the twelfth census of the United States and for 60,000 positions to be filled hundreds of applications are already being received daily at Washington. While the general plan of taking the census will be the same as was adopted in 1890 the Government will profit by past experience and will conduct it on a much more practical plan than heretofore.

In preparing the reports there are really two counts taken of the population. The first by enumerators, who make their canvass from house to house and from farm to farm, noting the number of persons in each family in connection with other information; the second count is taken at the bureau. It would be the task of years to ascertain the number of people in the country if the usual methods of addition were followed, but the bureau brings into use a device which allows 100 clerks to get out the totals in a few days. This time they will probably complete additions within ten days.

One of the rooms in the census bureau will be fitted up with electric tabulators, each of which is connected to a keyboard regulated by one of the counting clerks. Each tabulator is arranged to register from one to forty. As the reports of the enumerators are received, piles are placed beside the operator, he picks up the first, glances at the figures marked in a certain corner, touches the key on which that figure is marked and the corresponding figures appear on the face of the tabulator. By comparing these with the ones on the report he knows whether he has registered accurately or not. At the same time the total number registered appears in another space on the face of the tabulator. If the family comprises seventeen persons, that number is registered in addition to the 50,000 or more which may have been counted. It is calculated that no family will exceed forty persons, including the children, brothers and sisters and other relations who may be living in the house. In case the number runs above forty it must be added separately, but this seldom occurs. When it is stated that 100 of these machines are being worked at the same time by counters, who finger the keys almost as rapidly as if they were working a typewriter, an idea may be gained of the speed with which the work progresses.

RAPIDITY OF POPULATION COUNT.
In the last census some of this force counted 48,000 persons daily. They were among the women clerks, however, who obtained a much better record for speed than did the men who ranged from 25,000 to 30,000 persons each daily. It is expected that this year fully 10,000,000 persons will be counted daily at the rate of nearly 2,000,000 families, which, as already stated, ought to complete the work within ten days.

The canvass from house to house will begin at the same time all over the country. To carry out this part of the census properly, the country is divided into 300 districts, each in charge of a supervisor, who has the appointment of the enumerator. Altogether about 50,000 of these enumerators will be needed. Any one who is fairly intelligent and who can read and write is qualified for the position, and this army will be made up principally of those who have influence with the supervisors, either through Congressional representatives or otherwise.

It is not an easy undertaking, as the ones who canvass the cities will have many more families to visit than will those in the rural sections. The limit is supposed to be about 4000 families, although in some portions of the United States all of the time will be required for an enumerator to visit fifty or sixty families, owing to the distance between habitations in the more sparsely settled portions. The pay will range from two cents a name upward, varying according to the difficulties of the work, and is largely at the discretion of the supervisors.

SOME OF THE QUESTIONS.

The Government is very much interested in knowing what proportion of the people is not self-supporting, also what portion is insane or imbecile, and it keeps a careful record of the men who have been in its military service. The report, which is required to be made of each family, however, contains answers to about thirty questions, which give enough information to furnish a fair account of every person who comes under the enumerator. The questions relate to the number of persons in the family visited; their names, relationship, color, sex, age, condition, birthplace, number of children of the various parents; citizenship, the school attendance of the children, those who speak English and those who speak a foreign language; if dwelling is owned or rented or mortgaged.

Ample space is allotted for this information, and in a conspicuous space in the corner of the sheet is a place for figures representing the number of persons. In cities and larger villages the canvassers call at the principal factories and business places, and thus obtain additional statements which tend to verify those made in the dwellings. Schedules assigned to the country districts include general questions about the number of acres to the farm, acreage of cultivation, the average yield of the principal crops and the variety of staples which are raised.

MAY BE 25,000,000 SCHEDULES.
As probably 25,000,000 enumerators

schedules will be received to be examined and tabulated at the census bureau the amount of work in this respect alone can be appreciated. It would form the basis for a dozen volumes of a thousand pages each, but it really represents but a minor portion of the work, for the investigation by the special agents is considered as important and involves much more labor.

In outlining the operations of the special agents the Government is of the opinion that information of the principal industries is of general public interest as well data of new and peculiar branches of manufacturing, mining and the like. In the reports on agriculture it also gives special attention to the cultivation of staple crops, growing of fruits and the raising of certain vegetables. The fishing business, which was considerably neglected in the last census, will be exhaustively investigated, especially as to methods and production.

The various special agents, of whom probably 2500 will be employed at different times, are supposed to have a technical knowledge of the work to which they are assigned. For instance, a bank clerk or bookkeeper will not be sent to obtain statistics of steel manufacturing, nor will a man familiar with the manufacture of nails be commissioned to obtain facts regarding the textile industry, or the growing of tobacco. A report on cotton manufacturing in certain districts means not only the number of mills, the capital invested and the amount of equipment, but the number, character and age of employees, the quality and quantity of goods manufactured, the average market price, the power utilized, the cost of the fuel, if any, the age of the mills and the material of which they are built, the possibilities for enlargement and the general prospects. To do work of this kind requires a man who has an idea of the industry; otherwise bad mistakes will greatly affect the character of the report. Some of the special agents may be in the service only a few days, while others will be hard at work possibly for two years. One may have his field of labor in a district a few miles square, while another may travel a thousand miles in order to gain what he desires, for much of his information must be obtained personally.

FIVE SECTIONS OF BUREAU.
Enumerators and special agents comprise the field force. Supervisors, however, have nothing to do with the special agents, who receive all their instructions from Washington direct. To handle the thousands of pieces of literature which begin coming in a few days after the enumerators start out and which continues for two or three years, requires a large office force. The present bureau will be divided into five sections, each in charge of a bureau chief, who, in turn, is under a chief statistician, of whom five are appointed. These are the executive heads of the bureau and are under the general supervision of the director and his assistant. Attached to the director's office is a geographer and the necessary force for attending to the correspondence and reports, which must be handled in the director's office proper. The great bulk of the work, however, comes through the five divisions. In general, it may be considered that they digest and separate the information. Every schedule from the enumerators and every report from the agents passes through so many hands and is examined so many times. As it goes from department to department each department extracts whatever information it desires for tabulation. The reports of the special agents are very closely scrutinized by employees, who are appointed especially for the purpose of detecting errors. When any are found the report either is sent back to the agent for correction, or efforts are made to obtain the accurate data from the sources of the information.

ARMY OF BUREAU EMPLOYEES.
To handle the necessary correspondence relating to these matters, to correspond with the various supervisors and to attend to other mail matter will require more than 100 stenographers and correspondence clerks, in addition to expert bookkeepers, copyists, ordinary clerks, watchmen, janitors and messengers. The mail matter will be enough to run a good-size postoffice and a branch of the city postoffice service probably will be established in the bureau, in order to save time. Salaries will range all the way from \$3000 a year, paid to the chief statisticians, to \$240, paid the office cleaners. The special agents will average from \$3 to \$6 a day for actual work, in addition to what is necessary for traveling expenses.

At the end of the last census some interesting conclusions were made as to the quantity of the matter handled by the census bureau. Its weight was estimated at 305 tons and the space it occupied in the storage rooms was 29,000 cubic feet. As there will be a large increase in the number of reports on the present work these figures will give an idea of what it means to take the coming twelfth census of the United States.

Where Livingstone's Heart Lies.

A letter has been received by the Livingstone Memorial Company, of Blaityre, from the deputy administrator of Northern Rhodesia offering, on behalf of the British South Africa Company, to reserve a plot of a hundred acres in extent around the spot where the heart of the great explorer is buried, and the committee, at a recent meeting, resolved to forward a letter to the administrator thanking him for the offer and accepting it. The memorial itself is to take the form of a column forty feet high.

The price of medicine in Prussia is regulated by the State, a new price list being published every year.

Paying Double Prices

for everything is not pleasant, is it? But that's what you are doing, if you don't buy here. Did you think it possible to buy a \$20.00 bicycle for \$10.00? Catalogue No. 57 tells all about Bicycles, Sewing

Machines, Organs and Pianos. What you think of a suit of clothing, made-to-your-measure, guaranteed to fit and express added to your station for \$5.00? Catalogue No. 57 shows 32 samples of clothing and shows many bargains in Shoes, Hats and Furnishings. Lithograph Catalogue No. 47 shows Carpets, Rugs, Portieres and Lace Curtains, in plainest to country. We pay freight, new carpets free, and furnish lining without charge.

What do you think of a Solid Oak Dry-Case Family Refrigerator for \$3.95? It is but one of over 8000 bargains contained in our General Catalogue of Furniture and Household Goods. We save you from 50 to 60 per cent. on everything. Why buy at retail when you know of us? Which catalogue do you want? Address this way, JULIUS HINES & SON, Baltimore, Md. Dept. 308

That Congressman Allen prefers champagne to whiskey is being used as an argument against his election to the Senate from Mississippi.

Beauty Is Blood Deep.
Clean blood means a clean skin. No beauty without it. Cascarets, Candy Cathartic, clean your blood and keep it clean, by stirring up the lazy liver and driving all impurities from the body. Begin to-day to banish pimples, boils, blotches, blackheads, and that sickly bilious complexion by taking Cascarets—beauty for ten cents. All druggists, satisfaction guaranteed, 10c, 25c, 50c.

Thirty-five men of Peoria, Ill., have formed a club, and each member is pledged to marry a widow. Fines, penalties and expulsions are provided for a violation of the rules. There is no age limit on the widow, and where a member marries a widow with children he receives a portion of the fund accumulated through fines.

Mirror for a Piano Back.

One of the hardest things in a room to arrange artistically is the piano now that fashion has decreed that it shall be dragged away from the wall. Many an otherwise perfect apartment has been spoiled by the inartistic arrangement of the piano back. A great aid in overcoming this is a mirror made the exact width of the piano, and placed flat against its back. On each side narrow curtains may be placed, and the mirror used either as a reflector, or with painting on frame and glass. Palms may be prettily arranged at the foot, to be repeated in the glass surface, or a tiny seat placed there, with cushions of quaint shape and material. With the mirror as a starting point one may have endless varieties of decoration.

The Voice of London.

A writer in the Strand Magazine describes the astonishment he experienced when, riding over London in a balloon, at a height of more than half a mile, he heard the deafening roar of the great city beneath him, as it could not be heard when on the ground. The noise, even at that height, was so harsh and intense as to be painful to the ear. How perfect a sound conductor the air is was shown when the balloon drifted far over the city to a wooded part of the country, where the murmur of the leaves moved by the wind, half a mile below, was distinctly heard.

Power of the Lyddite Shell.

According to the reports of the operation of the British artillery before Omdurman, lyddite, with which the shells thrown into the city were charged, is the most frightfully powerful explosive ever introduced into warfare. At one time 118 men were assembled in an iron mosque beside the mahdi's tomb. A lyddite shell fell among them, leaving only twelve alive. So terrible are the effects of this explosive that while it was being tested in England, no person was allowed with a radius of 800 yards from the point at which the projectile was to burst. Within 400 yards, so it is stated, so violent were the vibrations produced by the explosion of a large shell that many solid objects, such as masses of masonry, were reduced to dust. It is manufactured from the principal ingredient of all coal-tar oils, carbolic acid. This is treated with nitric acid, and produces picric acid, an extremely destructive explosive. Makers of projectiles have always fought shy of picric acid, because of the great danger in handling it. The problem has been solved by fusing it, and so increasing its power tenfold. This is lyddite, which can be manipulated without fear. When touched by a flame it burns brightly, though without violent explosion. It is only when confined and exploded by detonation that its destructive powers are exhibited.—Chicago Record.

A Well-Protected Bank Check.

Richard K. Fox, the printer and publisher, makes use of what is probably the best protected bank check in existence. In the first place, the ground of the check is printed with a lined tint-block, that prohibits any scratching for alteration. Then the dollars are punched out with a check-punch, and a strip of red paper is firmly glued back of the punched holes, to prevent any chance of filling and repunching. The amount of the check is written in letters and also in figures in spaces so small that the writing fills the whole of each space. As a final protection, the amount is again written in red ink clear across the face of the check, over the other writing and printing. It would be possible to counterfeit one of these checks, but to raise one would puzzle Cagliostro himself.

No fewer than 14,000 Italians have made their homes in the Swiss canton of Zurich.

PORTO RICAN KITES.

Men and Women as Well as Boys Interested in Flying Them.

On the long slopes of brilliant green grass that stretch away from the walls of Cristobal Colon and dwindle down into the city of San Juan, Porto Rico, a great crowd of curious and noisy men, women and children stand every morning, gesticulating half madly at one another, talking very fast and occasionally breaking up into little groups, more excited than the rest. Above their heads there is always a flotilla of big kites, ducking, diving, floating upward and performing queer tricks as they flirt and play with the ocean wind billowing inward from the southern sea.

One great red paper monster darted swiftly upward above the others on one occasion. Then a shout went up from the crowd. It seemed to be having a race with a blue one sailing dangerously near. A hundred trembling arms with outstretched fingers were raised frantically in the air, shaking five and ten peso notes, offering bets on the red. The champions of the blue made verbal pools, and so the betting went on amid tremendous excitement, more noticeable than a public demonstration in honor of the Governor-General.

Suddenly the flyer of the blue, a dirty little Catanian, unwound several yards of string that guided his airship. Its tail was long, striped like the hide of a zebra, and loaded with strips of cardboard all along its graceful length. Little American flags floated from the edges of the kite and the end of the tail, for this Porto Rican was a diplomat, like his brothers. And when he unwound the guiding lever, at once the blue shot up, huddled close beside the red for a moment, and then at once, with an incomprehensible movement, it darted across the face of its antagonist and in a moment the latter was floating downward uncontrollably toward the ground. The sharp, curved knife with which the blue was burdened had severed the string of the red, and the latter had lost and the victorious kite flew upward like a newly liberated bird.

The knife is a necessary and legitimate burden of every kite that enters the betting ring, and this seems to enhance the uncertainty of the sport, and it requires a magnificent display of skill to avoid the blades or to attack an antagonist. The skill which men and even boys display in this respect is sometimes almost astounding. In a country where cock-fighting is a national sport, and where bull-fighting would be in vogue if the American authorities would permit, where gambling is the chief pastime of both men and women, it is somewhat surprising that so mild a practice as kite flying should hold the attention with the power that it does. The element of chance, however, and the right to unlimited and unrestricted betting, has carried it swiftly into popular favor, and so it remains to-day.

In Porto Rico Laurio, now moved to Havana, was for years the potentate of kites. He used to sit in the sun there under the soft blue sky, way up on the hill near old Cristobal Colon, and he had his colored paper spread about him, with little heaps of long, slender sticks carved from bull-fighting wood tree. His pastepot stood beside him, as he whittled with a long, keen blade like a machete.

Educate Your Bowels With Cascarets.

Candy Cathartic, cure constipation forever. 10c, 25c. If C. C. C. fail, druggists refund money.

The library of J. T. Delane, who was editor of the London Times for nearly a quarter of a century, has just been sold at auction. Most of the books were found to be uncut.

NEVER IMITATED IN QUALITY.

THE EXCELLENCE OF SYRUP OF FIGS is due not only to the originality and simplicity of the combination, but also to the care and skill with which it is manufactured by scientific processes known to the CALIFORNIA FIG SYRUP Co. only, and we wish to impress upon all the importance of purchasing the true and original remedy. As the genuine Syrup of Figs is manufactured by the CALIFORNIA FIG SYRUP Co. only, a knowledge of that fact will assist one in avoiding the worthless imitations manufactured by other parties. The high standing of the CALIFORNIA FIG SYRUP Co. with the medical profession, and the satisfaction which the genuine Syrup of Figs has given to millions of families, makes the name of the Company a guaranty of the excellence of its remedy. It is far in advance of all other laxatives, as it acts on the kidneys, liver and bowels without irritating or weakening them, and it does not gripe nor nauseate. In order to get its beneficial effects, please remember the name of the Company—

EASY WAY TO FIGURE SPEED.

A simple way to calculate the speed of a bicycle by the rider is to multiply the gear by 10 and divide by 56. The result may be called seconds for this particular purpose. The number of complete revolutions made by either pedal in the given number of seconds corresponds exactly to the rate of miles per hour. For instance, if the gear be 84, multiplied by 10 and divided by 56, the result is 15. If the pedal goes around 20 times in 15 seconds the rider knows that he is going at the rate of 20 miles per hour. If the gear be 67.2 the result of the calculation is 12 seconds, and the rider would have to push his pedal around 20 times in 12 seconds to equal the speed made by the man on the higher gear by 20 revolutions in 15 seconds. To divide the gear by 5.6 gives nearly the same result as multiplying by 10 and dividing by 56, but is not quite so accurate.

New Remedy for Insomnia.

A Russian remedy for insomnia is to have a dog sleep in the room, and preferably in the same bed. It may be through a sense of companionship, or one of security, or it may act suggestively; at any rate it is said at times to prove of value when other means fail.

An Allurement.
