

"Circumstances Alter Cases."

In cases of scrofula, salt rheum, dyspepsia, nervousness, catarrh, rheumatism, eruptions, etc., the circumstances may be altered by purifying and enriching the blood with Hood's Sarsaparilla. It is the great remedy for all ages and both sexes. Be sure to get Hood's, because

Hood's Sarsaparilla
Never Disappoints

Farm For Sale.

One of the very best hill farms in Waitsfield, Vermont, seven (7) miles from railroad, one-half (1/2) mile from steam sawmills, comprising 200 acres, half of which is under the highest state of cultivation. Plenty of good timber and excellent pastures. Sugar orchard of 2000 trees, equipped with twelve hundred tin tubs two years old; the balance wooden tubs newly painted and in first-class condition. Latest improved evaporator iron arch, large sugaring-off arch, sugar-house containing 60 cords four-foot dry wood; three years' supply stovewood on hand. Burns in first-class condition, one nearly new, 15 ton silo; abundance of small fruit; splendid orchard of grafted trees. The place kept through last winter forty (40) head of cattle, seven horses and other small stock; never-failing water at barns and dwelling. Complete set of tools of the best make. The whole place is well fenced and thoroughly well kept up. Dwelling is first-class; two stories, twelve rooms, recently painted inside and out. The whole would be sold at a great bargain, on account of the owner's leaving. For further information apply to F. A. Joslyn, Waitsfield, Vermont.

Russia has abolished the distinction that has heretofore existed between Russian and Finnish postage stamps. Finnish postoffices are now provided with Russian stamps only.

Eucalyptus Four Bowels With Cascarets.
Candy Cathartic, cure constipation forever. 50c. 50c. If C. C. fail, druggists refund money.

HAS TICKED FIVE CENTURIES

Famous Old Clock in Rouen Has Kept Time for 510 Years.

From the Cincinnati Enquirer: Rouen, one of the principal cities of France, and the greatest seat of its cotton manufacture, possesses the oldest public clock in the world. The great Rouen clock has held its place in that city for 510 years and is the pride of its citizens. Placed in 1389, it has been running without interruption from that day to this, requiring nothing except cleaning and a few trifling repairs of its accessory parts. The great clock has upon its exactitude as a matter of course that when, in 1572, the breaking of a wire prevented its sounding 5 o'clock one morning, the population was in a state of consternation. The magistrates summoned the custodian—Guillaume Petit—and remonstrated gravely with him. Until 1712 the great clock had no pendulum. For 323 years it had no other regulator than a "foliot," an apparatus unknown to the majority of modern clock makers. The pendulum in clock work was introduced in 1659, but so well satisfied were the people of Rouen with the time keeping qualities of their famous old clock that fifty-three years were allowed to pass before a pendulum was substituted for the "foliot." Equipped with this new apparatus it has continued to this day to strike the hours and chime the quarters.

How a Sea Gull Catches a Mole.

A farm manager at Fodderly, Dingwall, Scotland, watching a mole catcher at work, saw sea gulls hovering over, and occasionally alighting upon a turnip field, in which the observer and others were at work. A particularly large and handsome bird attracted his attention by the graceful way in which it floated slowly over the drills, intently scanning the surface of the ground. Suddenly, steadying itself a moment, it dropped, dug its bill into the ground, and rose with a mole for its prey. Resting a few minutes, it gracefully began again a further search for prey. In a few minutes a second mole was unearthed.

Czar's Military Household.

The military household of the czar is composed of 98 officers of various ranks, 83 of whom belong to the army and 15 to the navy. Nineteen members of the royal family are included in this list.

Mrs. Barnard Thanks

MRS. PINKHAM FOR HEALTH.

[LETTER TO MRS. PINKHAM NO. 15,992]

"DEAR FRIEND—I feel it my duty to express my gratitude and thanks to you for what your medicine has done for me. I was very miserable and losing flesh very fast, had bladder trouble, fluttering pains about the heart and would get so dizzy and suffered with painful menstruation. I was reading in a paper about Lydia E. Pinkham's Vegetable Compound, so I wrote to you and after taking two bottles I felt like a new person. Your Vegetable Compound has entirely cured me and I cannot praise it enough."—Mrs. J. O. BARNARD, MILLTOWN, WASHINGTON CO., ME.

An Iowa Woman's Convincing Statement.

"I tried three doctors, and the last one said nothing but an operation would help me. My trouble was profuse flowing; sometimes I would think I would flow to death. I was so weak that the least work would tire me. Reading of so many being cured by your medicine, I made up my mind to write to you for advice, and I am so glad that I did. I took Lydia E. Pinkham's Vegetable Compound and Liver Pills and followed your directions, and am now well and strong. I shall recommend your medicine to all, for it saved my life."—Miss A. P., Box 21 ABBOTT, IOWA.

DOOM OF RANGE HORSES

THE VAST HERDS OF THE NORTHWEST DISAPPEARING RAPIDLY.

Cattlemen and Sheepmen Are Driving Them From the Pasture and Water Exposure is Killing Them, and Factories Are Canning Them.

Gradually but surely the great herds of range horses on the interior plateaus of Washington, Idaho and Montana are being driven to the wall. Several causes are working to depopulate the bunch grass ranges of the vast herds that have roamed there for centuries. Briefly stated, the chief causes are the increased demand for irrigable lands, followed by fencing, of great areas of range lands by cattlemen and sheepmen. The latter are fencing in the springs, creeks and ponds that form the water sources so vital to range industry. These facts denote a new era in the development of Western sheep and cattle raising, increasing production, and putting the industry on a solid basis. It ends the indiscriminate pasturing of cattle, sheep and horses over immense areas of the Northwest States. It means the confining of the cattle and sheep to lands that can be acquired, fenced and made more productive, and it means also the gradual extinction of the horses.

The horses, or at least their owners, know that their hour of doom has struck, declares the New York Sun. Already they are being moved off the ranges by tens of thousands. Those left are forced to eke out a precarious existence on the dry pasture lands left by the cattle and sheep herders, where they may die of thirst in the summer or starve to death in the winter, with no one to mourn their end.

During the last two years at least 65,000 head of range horses have been removed from the ranges of Eastern Washington alone. Their disposition has been approximately as follows:

Shipped to Chicago and other Eastern markets.....	10,000
Sent to Alaska during the Klondike rush.....	8,000
Canned into horse meat at Linton, Oregon, for shipment to France.....	9,000
Driven to Idaho, Montana, Wyoming, Colorado and Utah, largely for pack and saddle horses.....	10,000
Broken for use by new settlers in Washington.....	10,000
Died during the last two winters.....	8,000

Loss from State in two years.....65,000. This loss has been double the natural increase, reducing the number of wild horses in the State from about 125,000 to 80,000 or 90,000. At this rate of decrease they would last for many years, but the fact is that the horses are being confined to a smaller area each successive year, thereby increasing the chances of destruction.

The figures given are based on estimates furnished by E. F. Benson, who has charge of leasing the range lands of the Northern Pacific Railway. He reports that the cattle and sheep men are now leasing, buying and fencing lands so rapidly that the range horses already find it difficult to obtain water. The attempt of large numbers to feed on the scanty range left to them must leave them thin in the fall, and it will need only one hard winter, with deep snow and cold weather, to kill them off by thousands. Their usual method of winter feeding is to paw through the snow for the tufts of rich bunch grass which furnish their sustenance, but under the present conditions these tufts will be eaten off by the hungry herds before the snow flies. At least 5000 horses died of starvation last winter in the districts north and south of the Snake River. From fifty to eighty per cent. of some bands vanished under the conditions of short grass and deep snow. The cattle and sheep, on the other hand, are rounded up in the lower valleys during the fall and fed during the winter.

Mr. Benson reports that the range horses are now confined almost entirely to the thinly populated counties of Douglas, Lincoln, Adams and Franklin and parts of Yakima and Kittitas. These animals are worth from \$3 to \$20, according to size and quality. A large proportion of them are cayuses, others are strong, large-boned horses.

In June 5000 head of Douglas County horses were sold for shipment East at \$2.50, \$3 and \$6 a head, according to size. The horse canning factory at Linton, Oregon, has converted about 9000 head into meat for shipment to France and Germany in the last two years. A still larger number will be canned in the near future, for the industrial department of the Northern Pacific Railway has aided in the establishment of another horse canning factory at Medora, North Dakota. A home market for many thousand head has been occasioned by the boom in the wheat industry consequent upon the good crops and the good prices of the past two years. Thousands of wild horses, weighing 1100 pounds and upward, have been broken to the plow by both old and new settlers. The indications are that this local absorption will continue in a limited way for several years in Eastern Washington and Idaho.

While the cattle and sheep men have in effect combined against their common enemy, the range horses, it is no less true that cattlemen look askance at the steadily increasing numbers of sheep pastured in the open range country. While the natural increase of the bands of sheep is rapid, tens of thousands more have been moved to the Northwest from California on account of fierce drought. The sheep become profitable from the first year, since the two principal crops, lambs and wool, coming in May and June, are salable within the fiscal year, while the herds of cattle must be maintained three or four years before profitable returns are possible. It is due to this fact that the cattle men be-

gan purchasing and fencing the range lands several years ago, and the sheep men, as a matter of self-protection, have followed suit. The need of the sheep men for wider pasturage has caused the industry and its custom of occupying the open ranges to be officially recognized by the United States Government in its measures for policing and protecting the great forestry reserves recently set apart in Washington and Oregon. The Government's primary object is to prevent forest fires, which greatly injure the watershed. On condition that they use the utmost precaution to prevent fires the sheep men are permitted to drive their bands into the rich pasture lands on the mountain slopes of these reserves. The forest supervisors have divided the reserves into districts for the various bands, the limits being marked by streams, ridges and other natural boundaries.

SCIENTIFIC AND INDUSTRIAL

The cooling of the air continues until condensation of the watery vapor begins. Watery vapor is always present in greater or less quantities. The temperature at which this condensation takes place is the dew point, and it is this occurs at thirty-two degrees Fahrenheit or below, frost is formed.

Eleven different fats in emulsions have been tested to determine whether they would allay cough and increase weight. The effects with cod-liver oil proved to be variable. The best results were given by beef fat, olive, peanut and coconut oil, and the experimenter has concluded that a mixture of these four fats, with the addition of a little clover oil, is much superior to cod-liver oil.

Many people regard gold as one color; this is a mistake, as pure gold varies considerably in hue. An expert can tell the locality from whence it was derived by its color. Australian gold is a very much redder than Californian, Nugget gold (Klondike, for instance) is yellow, whereas that from quartz is of a deeper "golden" tint. The reddest gold comes from the Ural Mountains. Of course few people see pure gold, for the metal of commerce and even our coins are alloyed. Native metal is much too soft to be used alone, and requires an alloy to enable it withstand rough wear and tear.

In English potteries last year 4.9 per cent. of the male workers and 12.4 of the females suffered lead poisoning. After investigation, Professors Thorpe and Oliver recommend that the use of raw lead in glazes and colors be prohibited, and that young persons and women be excluded from work in certain operations. Experiments of the last few months have shown that satisfactory leadless glazes are now within reach of the manufacturer. In some branches of the pottery industry, however, it might be difficult to dispense altogether with lead compounds, and in such cases the risk of poisoning could be greatly reduced by using the lead in the form of a fritted double silicate. The older factories, in which it is impossible to introduce favorable sanitary conditions, should be closed.

Bohemia now furnishes the largest amount of graphite for European use. It is found in its purest condition in the gneiss accompanied by crystalline limestone near Schwartzbach and Murgan. That portion of the mineral sufficiently pure is shipped away as it is mined, but the inferior product is ground in mills where a stream of water takes up the powdered graphite and deposits it in sheets in the form of mud. These are subsequently pressed and dried in a stove. There is in Bohemia an average yearly production of 885 tons, which comes principally from three mines—the two mentioned above and that of Krumman, which produces an inferior grade of the substance. These mines afford employment to 728 operatives, and the better qualities of the graphite are always in active demand.

Dangerous Place.
First Tragedian—Just listen to this: "In California there are ostrich eggs weighing three pounds." Second Tragedian—Great Scott! Isn't it lucky our troupe didn't get a chance to play in California this year?

Spanish Indifference.
Nothing, indeed, is so striking to the traveler as the perfect serenity of Madrid, says a writer in Blackwood's, and it is a serenity not of carelessness, but of resignation. The Spaniard, being a brave man, regrets that he has been beaten; but, being also a creature of confirmed habit, he convinces himself that regret is not worth expressing. So once more the pertinacity of the Spanish character is exemplified. The great kings who in the past ruled the peninsula suffered many and grievous defeats, and it was their constant practice to put away from their minds the unpalatable truth.

Two years ago the average Spaniard was secure in the knowledge that Cuba would be his until the end of time; to-day he knows that Cuba belongs to him no more. But he does not declare his knowledge; he bears it with what patience he may, and waits to celebrate the distinctions of the past. Now can the unprejudiced traveler traverse Spain without a side glance at the neighboring republic. The French and the Spaniards are both popularly believed to carry Latin blood in their veins, and though many a conquest has mixed the race of each, they still stand to one another in the relation of distant cousins.

Unable to Return the Compliment.
A Yorkshire farmer was asked to the funeral of a neighbor's third wife, and as he had attended the funerals of the two others, his own wife was rather surprised when he declined this invitation. On being pressed, he gave his reason with some hesitation: "Well, these sees, lass, it makes a chap feel a bit awkward like to be allus accepting other folks' civilities, when he never has nowt o' t' soart of his own to ax 'em back to."—New York World.

Dizzy? Then your liver isn't acting well. You suffer from biliousness, constipation, Ayer's Pills act directly on the liver. For 60 years the Standard Family Pill. Small doses cure. 25c. All druggists.

A tank of chlorate of potash recently exploded in a factory in Lancashire, England, with disastrous results. As the substance is not combustible in itself, although a powerful aid to combustion under some circumstances, the disaster is not easy to account for.

To Cure Constipation Forever.
Take Cascarets Candy Cathartic, 50c. per 25c. If C. C. fail to cure, druggists refund money.

Diamonds and other precious stones to the value of \$20,000,000 were imported at New York during the last fiscal year. Three years ago the imports of this kind amounted to only \$7,500,000. The market price of diamonds is now 25 per cent. higher than it was a year ago.

ORIGIN OF THE TERM CADDIE.

Ingenious Explanation of Common Golf Term by Frank Boyd.

To some, at least, of the unnumbered and innumerable host of golfers the question may have occurred at one time or another—Whence came the word "caddie"? Frank Boyd, in his "Omitted Chapters in the History of Monifeth," which he contributes to "The Book of Monifeth Golf Links Bazaar," offers an ingenious as well as highly amusing explanation of the term. There was, he says, a Cuidee, or "Keleled," establishment at Monifeth at one time, till the monks of Arbroath dispossessed the Cuidees of their lands and made them their servants. One day it occurred to a monk, while having a game of golf, to make the Keleled carry his clubs. He found this contributed greatly to his comfort.

"The plan was adopted by the rest of the monks, and henceforth they never went out without being accompanied by their Keleled. Now you know," continues Mr. Boyd, "that in these parts the practice is to cut short words in which the letter 'i' is used. A native, for instance, never says 'Balgray,' it is always 'Balgrie.' Thus it was natural that in the course of time the 'i' should drop out of the 'Keleled,' and it should come to sound like 'caydee,' and to this day this is how the word is pronounced by superfluous Scotch youths. In the strong Forfarshire vernacular it was, however, broadened out to 'caddie.' As a matter of fact, the origin of the term 'caddie' does not appear to have ever been satisfactorily explained. Jamieson, who defines caddie as one who earns a livelihood by running errands, delivering messages, and so on, expresses the opinion that the term was originally the same with the French cadet, which, as he remarks, is sometimes used to denote a young person in general. Dr. Murray, in his colossal work, holds the same view, but how the word came to be employed to denote the lad who carries a player's golf clubs has still to be elucidated.—Literature.

Discovery of the Southern Icefields.
The home and origin of the southern iceberg are a matter full of romantic interest. In 1774 Captain Cook sailed down into the unknown Antarctic regions, and after terrible hardships reached a spot where he saw a snow-white brightness in the clouds to the south, and he knew he was near the icefields. Four hours later he was stopped by a great ice barrier in latitude seventy-one degrees south, where the mountains of ice, rising one above the other, tier upon tier, into the distance, were lost in the clouds of the polar sky. The desolate grandeur of that icy coast appalled the great navigator, and, seeing no possibility of pushing to the pole over those impassable mountains, he contented himself with having gone further than any one had ever been before, and, he thought, as far as any man could go. He speaks of vast glaciers descending from the interior, and of ice islands and floats near the coast; and from his remarks it is easily seen that he had found the home of southern bergs.—London Globe.

An Excellent Combination.
The pleasant method and beneficial effects of the well known remedy, SYRUP OF FIGS, manufactured by the CALIFORNIA FIG SYRUP CO., illustrate the value of obtaining the liquid laxative principles of plants known to be medicinally laxative and presenting them in the form most refreshing to the taste and acceptable to the system. It is the one perfect strengthening laxative, cleansing the system effectually, dispelling colds, headaches and fevers gently yet promptly and enabling one to overcome habitual constipation permanently. Its perfect freedom from every objectionable quality and substance, and its acting on the kidneys, liver and bowels, without weakening or irritating them, make it the ideal laxative.

In the process of manufacturing figs are used, as they are pleasant to the taste, but the medicinal qualities of the remedy are obtained from senna and other aromatic plants, by a method known to the CALIFORNIA FIG SYRUP CO. only. In order to get its beneficial effects and to avoid imitations, please remember the full name of the Company printed on the front of every package.

WATERING FLYING ENGINES.

Four Thousand Gallons Taken in While the Train is in Motion.

Among the remarkable features of modern railway travel the one that always attracts attention is the trick of taking water by the engine while it is in motion. The American tourist has become accustomed to seeing the narrow trough, twelve to fourteen hundred feet long, at various dead level points along the road, and he knows that the strip of water which it contains is scooped up by the engine as it speeds over the tracks. But people from foreign countries often ask questions about the water between the tracks, and marvel when they hear the story about "drinking" the engine on the fly.

What seems a marvellous mechanical contrivance is an extremely simple thing. A pipe with a scoop end is fastened to the tender. It is C shaped, with the top end pointing in to the water tank and the bottom curled under the body of the tender. By a series of levers this end may be dropped until it reaches the level of the ties. When the engine reaches the trough the fireman drops the scoop end which is 3 1/2 inches high and twelve inches wide, into the trough into which it sinks a distance of about six inches, or within an inch of the bottom. It may wobble slightly without doing any harm, because the trough is twenty-four inches wide. Dropping the end is all that is done, for the motion of the engine does the rest. The water rushes into the pipe and there into the tank with a rush and a force which suggests to the uninitiated the use of powerful engines.

"The most remarkable thing about the water taking scoop" said a New York Central Railroad official, "is the fact that the speed of the train must be reduced when the water is taken on. It reaches the bends in the pipe with such force that if the train were allowed to go at its regular speed the metal would be seriously strained, so we reduce the speed to about thirty miles an hour and have the best results."

While the engine is passing over the trough at the rate of thirty miles an hour it takes up about four thousand gallons of water—about as much as would be contained in one hundred spirit barrels.

Valuable Advertising Hints.
A good catchline is often half the battle. It is always possible to learn something from watching the advertising of others.

To print announcements that are not believable is almost an absolute waste of space. The best thing in an advertisement is specific information about the article advertised.

Most of the magazine advertising matter is as unreadable as the body of the magazines themselves. The newspaper is likely to become constantly a better medium, for every year the number of readers of it increases.

The picture ought to suggest the subject of the advertisement, and the advertisement ought to appear to have suggested the picture. Perhaps the worst fault of the neophyte advertiser is the struggle for originality at the expense of good judgment and common sense.

A slight misrepresentation in a single advertisement may often cast a shadow of doubt over all the advertiser's subsequent efforts, even though these be thoroughly reliable.

There appears to be a growing conviction among advertisers that a judicious use of white space is one of the most effective methods of displacing an advertisement. The contrast between the black type and the white paper is one that apparently attracts the eye at the first glance. It gives, also, an impression of easy reading, one of the best impressions, perhaps, that an announcement can give to prospective readers.—Printers' Ink.

Deafness Cannot Be Cured
By local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, deafness is the result, and unless the inflammation be taken out, and this tube restored to its normal condition, hearing will be destroyed forever. Nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous membranes. We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

Sold by Druggists, 75c.
Hall's Family Pills are the best.

No-To-Bac for Fifty Cents.
Guaranteed tobacco habit cure. Makes weak men strong, blood pure. 50c. \$1. All druggists.

Copper has risen and aluminum declined until the price of the two metals is almost the same. One pound of aluminum is equivalent to two of copper in carrying electrical energy, and if it were as easy to work and solder would probably displace copper to a considerable extent.

THE LAUNDRY CLASS.

In many of the schools of Domestic Science, Laundry work is now taught in a thorough and scientific manner. In the Laundry class-room Ivory Soap is always used to wash the articles that require special care and it is frequently used to the exclusion of all other soaps.

It is as important to know the best materials for domestic use as to know the best methods for using them, and Ivory Soap is very generally recognized, by those who have carefully investigated the subject, as the safest and purest soap.

COPYRIGHT 1899 BY THE PROCTER & GAMBLE CO. CINCINNATI

Spanish Cave Dwellers of To-day.
We commonly refer to the cave dwellers to pre-historic times, but there are still some of these people in parts of Europe that are considered civilized. Their primitive dwellings are, in some cases, natural caves, and in others have been hewn out of the rocks. Some of these homes in Spain are described by a writer. He says: "There is no need of an alms house in Alcala. One side of the hill above the town is honey-combed with caves, which are used by the poor as dwellings, free of rent and taxes. These caves run in tiers, with paths between them, and before each is a garden in which grow the prickly pear, fig, viles, maize and vegetables. The combination of rock and foliage gives the whole hillside that singular appearance of rocky fertility seen only in southern lands, and particularly in the presence of cactus growth. The people seemed quite as comfortably situated as many who lived in houses, and in general appearance the alms house hill of Alcala was more attractive than the gipsy quarter of Granada. Doubtless these caves have the advantage over ordinary houses of being warmer in winter and cooler in summer."

A Cultured Monarch.
King Oscar II, king of Norway and Sweden, is one of the most cultured men in Europe. He is remarkable in literature, his works comprising musical compositions, verse, fiction, and many volumes on technical subjects, and he has also translated into Swedish Goethe's Faust, which alone is a very great undertaking. He is a fine speaker, and in his youth had such a remarkably fine and well trained voice that it was considered one of his greatest gifts. The king, though now an old man, has a splendid presence, and in manner is simple and unaffected. He spends many months of the year at Tullgarn, his grand old estate on the edge of the cliffs overlooking the sea, and one of his greatest pleasures is drilling his little grandsons.

Beautify Is Blood Deep.
Clean blood means a clean skin. No beauty without it. Cascarets, Candy Cathartic clean your blood and keep it clean, by stirring up the lazy liver and driving all impurities from the body. Begin to-day to banish pimples, boils, blotches, blackheads, and that sickly bilious complexion by taking Cascarets—beauty for ten cents. All druggists, satisfaction guaranteed. 10c, 25c, 50c.
