Like Finding Money.

The use of the Endless Chain Starch Book in the purchase of "Red Cross" and "Hubinger's Best" starch, makes it just like finding money. Why, for only 5e you are enabled to get one large 10e package of "Red Cross" starch, one large 10e package of "Red Cross" starch, one large 10e package of "Hubinger's Best" starch, with the premiums, two Shakespeare panels, printed in twelve beautiful colors, or one Twentieth Century Girl Calendar, embossed in gold. Ask your grocer for this starch and obtain the beautiful Christmas presents free

gold. Ask your grocer for this starch and obtain the beautiful Christmas presents free Ingenuity of the Tabitans.

The Tahitans are said to be the people most serviceable to the traveler. They seem, in fact, to command at all times the principal conveniences of life. Haif an hour of daylight is sufficient for building a bouse of the stems and leaves of the fehl banana, and fire is produced by rubbing sticks. If the running water is deeply sunk among stones, by working in banana leaves they bring it to the surface. The chase of cels, which in those dripping mountains become almost amphibious, offers another instance of their ingentity. They tear off with their teeth the fibrous bark of "puran" (Hibiscus tilliaceus) and a moment after apply it to noosing small fish. If one is sent for fruit he will usually make a basket on the way by platting the segments of a cocoanut leaf. A mat will be manufactured with almost equal ease. Clothing is always at hand, and a banana leaf serves for an umbrella. Tumblers and bottles are supplied by single joints of the bamboo, and casks or buckets by the long stems, and whether you ask for a hatchet, knife, spoon, toothbrush, or washbasin, the guides will never be found at a loss.—San Francisco Chrombale

How Mrs. Pinkham HELPED MRS. GOODEN.

[LETTER TO MES. FINEHAM NO. 12,733]

"I am very grateful to you for your kindness and the interest you have taken in me, and truly believe your medicines and advice are worth more to a woman than all the doctors in the world. For years I had female troubles and did nothing for them. Of course I became no better and finally broke down entirely. My troubles began with inflammation and hemorrhages from the kidneys, then inflammation, congestion and falling of the womb and inflammation of ovaries.

"I underwent local treatment every day for some time; then after nearly

The Roads of Belgium.

The average road of Belgium is fairly good. Some are excellent and others beneath criticism—like America's. The main roads are well kept and some have special cycle paths, an institution which has been so successful that the Government has decided that there must be by this time as institution which has been so successful that the Government has decided to give up and go to bed. On breaking down the second time, I decided to let doctors and their medicine alone and try your remedies. Before the first bottle was gone I felt the effects of it. Three bottles of Lydia E. Pinkham's Vegetable Compound and a package of her Sanative Wash did me more good than all the doctors' treatments and medicine.

"The first remark that greets me now is 'How much better you look!' and you may be sure I never hesitate to tell the cause of my health."—Mas. E. J. Gooden, Ackley, IA.

GOOD ROADS NOTES,

The Farmer and Good Roads.

No one should be more interested in the improvement of the public highways than the farmer. There is no man, from a business standpoint, who is more vitally interested. Every year he loses many dollars because he is not able to take advantage of the highest market prices for his produce, because the time when the figures ranged the highest, it was impossible to haul a load to the nearest shipping point. The farmer being the most interested, should study this question and whenever it is in his power, work for highway improvement. Any man who will stop and think for one moment will see that the condition of the road between his farm and nearest shipping point, puts a value on his farm. shipping point, puts a value on his farm. The most fertile land, if practically isolated from the railroad for

farm. The most fertile land, if practically isolated from the railroad for six months in the year or for days after each heavy rain, is not a desirable farm and will not sell or rent at any price where there are other farms to be had.

Yet, regardless of this self-evident fact, what is the average farmer's position in regard to the roads? He is indifferent except when it comes time to work out his tax. Then he goes out on the road with his team at a snail's pace, and oh how leisurely and deliberately hie moves! He can kill more time on the road than the most shiftless farm hand he ever had. He knows that it was his vote that helped put the "boss" into office. He is a neighbor of the "boss," too, and doesn't fear being docked. In fact the "boss" is elected because he is an easy-going fellow, never takes a man away from his work, and is quite liberal when it comes to counting time. The "boss" is the chief of good fellows. He pleases the road workers, but what does he do to the roads? The workers work the "boss" as well as the roads. The "boss" works the township and draws his salary, but alas, the roads!

greater than the distance over between the same points.

The willfulness of one or two private individuals sometimes becomes a barrier to traffic and commerce. The great drawback to the laying out of roads on the principle referred to is that of the necessity, in some cases, of building them through the best lands, the choicest pastures and orchards, instead, as they do now, of cutting around the farm line or passing through old worn-out fields or over rocky knolls. But if farmers wish people to know that they have good farms, good cattle, sheep or horses, good grain, fruit or vegetables, they should let the roads go through the best parts of the farm.

hest parts of the farm.

A Novel Pian.

In the search for materials for making hard and smooth roads, a minister of Atlantic City, N. J., has hit upon the most novel plan yet, and if the experiments which have been made with it in Norfolk and Richmond are as successful as reported, cycle riders who fall from their wheels in the city streets where it is used will literally "go to grass," for it is of grass that the minister makes paving blocks. The salt sedge growth of the meadows used is first cured by means of a resinous preparation, which is intended to make it proof against the invasion of moisture and decay. The grass is then compressed by hydraulic power into blocks measuring fourteen by twenty-one inches and six inches thick. They weigh forty pounds percubic foot. The inventor says that he can make the "grass" blocks of granite consistency, but that they will not have the slippery surface of asphalt and wooden pavements. The noise made by wagons rumbling over granite blocks is also done away with by this grassy compound, it is said, for the blocks are resilient and hoof beats on it give out only a dull thud.

The Roads of Belgium

When Niscara Falls Alzaest Ran Dry.
About fifty years ago Niagara Falls nearly ran dry. Those of you who have seen that world-famous cataract, where millions of gallons of water plunge over the Falls every day, will find it hard to believe that anything could ever stop the torrent and make the Falls run dry. But "Jack Frost" did it in the spring of 1848. The phenomenon took place like this: The preceding winter had been extremely cold, and the ice on Lake Eric had frozen to great thickness. During the first warm days of spring this huge mass of ice was loosened from the shores of the lake and floated with the current toward the Falls. To help the thing along a stiff gale from the west drove the ice toward the mouth of the lake at a great rate. The result was the mouth of the lake was choked with ice so effectually that hardly any water could escape. Of course, in a short time the Falls drained the river almost dry, and on the morning of March 29, 1848, the islands and rocks of the river just above the Falls towered above feeble streams of water, and the roar of the great Falls had changed to a subdued moan. All day long the low tide remained, but at night the ice dam broke and down rushed the flood as before.

position in regard to the roads? He is indifferent except when it comes time to work out his tax. Then he goes out on the road with his team at a snail's pace, and oh how leisurely and deliberately he moves! He can kill more time on the road than the most shiftless farm hand he ever had. He knows that it was his vote that helped put the 'boss' into office. He is a neighbor of the 'boss' too, and doesn't fear being docked. In fact the 'boss' is elected because he is an easy-going fellow, never takes a man away from his work, and is quite liberal when it comes to counting time. The 'boss' is elected because he is an easy-going fellow, never takes a man away from his work, and is quite liberal what does he do to the roads? The workers work the 'boss' works the township and draws his salary, but alas, the roads!

Avoid Steep Grades.

Whether the road be constructed of earth, stone or gravel, steep grades should always be avoided if possible. They become covered at times with loaded vehicles as well as dangerous to descend. They allow water to rush down at such a rate as to wash great gaps alongside or to carry the surfacing material away. As the grade in creases in steepness either the load has to be diminished in proportion or more until with a grade of ten feet in 100 feet he can draw but one-fourth as much as he can on a level road.
Good roads should therefore wind around hills instead of running over them, and in many cases this can be done without greatly increasing the distance. To illustrate, if an apple or pear be cut in half and one of the halves placed on a flat surface, it will be seen that the horizontal distance around from stem to blossom is no greater than the distance over between the same points.

The willfulness of one or two private individuals sometimes becomes a barindividuals as ometimes becomes a barindividuals as ometimes becomes a barindividuals as one times a barindividuals as of the tense of the same

A strong-minded woman, albeit she looked it not, moved into a rather lonely suburb and the house was top-sy-turvy from the moving. On the lonely suburb and the house was topsy-turvy from the moving. On the
second night the strong-minded woman was awakened by the light of a
dark lantern shining into her face
from the hand of a burglar. It was
the last straw, and she sat up in bed
and exclaimed with vexaticn: "Well,
if you can find anything in this house
you're welcome to it; it's more than I
can do." The burglar snapped down
the slide of his lantern. "Goodnight," he said, and left the house
without touching a thing.—New York
Commercial Advertiser.

It Wellman Had Discovered the Pole.
Walter Wellman, the returned Arctic explorer, has a quaint gift of humor, which was happily displayed just before leaving upon his last trip to the frozen north. A pompous merchant, who does not believe in Arctic exploration because it produces no financial results, said to the traveler: "Supposing, after all this trouble and expense, you do reach the North Pole, what will you do then?"
"Why, come back again, of course,"

"Why, come back again, of course," replied Wellman. "There really doesn't seem to be anything else te do."—Philadelphia Saturday Evening

Crocodites Eat Stones.

Crocodiles, like ostriches, swallow pebbles and small stones, which serve the purpose of grinding their food. The natives assert that it is possible to tell the age of a crocodile by the number of stones in its stomach, for they swallow one each year. In point of fact fifteen stones have been found in the stomach of a crocodile twelve feet long, whereas the average number for the younger ones varies between for the younger ones varies between four and eight. So says Mr. Voltz-kow, who has been studying this mat ter for several years

to the making of metal-wheeled clocks, which drove the wooden wheeled clocks out of the market.

The Law of Compensatio

The Law of Compensation.

From the Argonaut: Richard Cumberland, Abe playwright, was extremely Jealous of his young rival, Richard Sheridan. It is related that he took his children to see one of the first performances of "The School for Scandal," and when they screamed with delight their irritable father pinched them, saying: "What are you laughing at?" You should not laugh, my angels; there is nothing to laugh at," adding in an undertone: "Keep still, you little dunces." When this was reported to Sheridan, he said: "It was ungrateful in Cumberland to be displeased with his children for laughing at my comedy, for when I went to see his tragedy I laughed from beginning to end."
