Ask your grocer for this starch Twentieth Century Girl Calendar, and for 5c. Ask your grocer for this starch and obtain these beautiful Christmas presents free.

DRIFTING BOTTLES.

Valuable Information as to the Ocean Currents.

Washington Spec. Baltimore Sun:
Some "aluable information respecting ocean currents has been obtained by the Naval Hydrographic office through floating bottles thrown overboard by steamers and recovered by passing ships, which report the exact points at which they were found. Frequently the bottles are picked up and again tossed overboard after the latitude and longitude and the number of the bottle have been noted, so that the office in Wasaington may know the direction taken by the bottle since put into the sea or last sighted by some vessel. In this way the direction it has drafted and the strength of the current can be accurately estimated. There are some recent returns which show that bottles have floated thousands of miles, and have floated thousands of miles, and one has a record of covering 2,400 miles in 92 days. This bottle was tossed overboard from the steamship Furs overboard from the steamship Furst Bismarck on May 1, 1898, about 350 miles southeast of Cape Race, and re-covered on August 1 in the vicinity of Gluck stadt, on the Elbe. The dis-tance between the two points, follow-ing the route through the English Channel, is about 2,400 miles, giving 26 miles as the lowest possible estimate of the daily average velocity with which the bottle availed. daily average velocity with the bottle traveled eastward. of the daily average velocity with which the bottle uraveled eastward. The longest distance made by any bottle was one thrown from the steamship Electrician, which covered 6,300 miles in a little over three years, or an average of nearly six miles a day. Another bottle traveled 6,000 miles in 574 days, or an average of eight knots, while another made 5,000 miles in 327 days, or an average of 15.3 knots a day. Another good record for a bottle is 300 miles in 16 days, or an average of 18.8 knots a day. In conducting its experiments the navy department has had the co-operation of the Russian government, which on the cruises of two of its vessels had thrown in the sea 703 bottles, of which 30 have been recovered and reported. Taken collectively, the paths followed by thesafoating bottles give a good idea of the drift currents of the North Atlantic. The motion of the waters seems to be westerly, as is evident by the destination of the numerous bottles cast adrift between Madeira and Cape San Roque, and of the drift currents of the North Atlantic.

Don't Need Another.

Lady Traveler—Allow me to detain you one moment, sir. I have here a neat and pretty little letter-opener—very handy. Gent (interrupting)—So have I—at home. I'm a married man,

Like Finding Money.

The use of the Endless Chain Starch Book in the purchase of "Red Cross" and "Hubinger's Best" starch, makes it just like finding money. Why, for only 5e you are enabled to get one large 10e package of "Red Cross" starch, one large 10e package of "Hubinger's Best" starch, with the premiums, two Shakespeare panels, printed in twelve beautiful colors, or one Twentieth Century Girl Calendar, embossed in gold. Ask your grocer for this starch and obtain the beautiful Christmas presents free.

Rats Undermined It.
An extraordinary occurrence happend the other day in Brussels. A milk-woman with her cart, drawn by two dogs, was passing through a street in the center of the city, when of a sudden the roadway opened and the cart and dogs disappeared. Investigation showed that the roadway had been undermined by rats, which swarm in the neighborhood.

Cheap Water in Glasgow

Chesp Water in Glasgow.

In Glasgow a \$75 householder obtains for \$1.42 per annum a continuous, never failing, unrestricted stream of the purest water in the world delivered right into his kitchen, wash-house and bath-room. It is calculated that 350 gallons of pure water are delivered to the citizens of Glasgow for every penny paid. And it is water of such peculiar softness that the householders of Glasgow can pay their water rate peculiar softness that the householders of Glasgow can pay their water rate out of what they save on soap. Loch Katrine water is not only soft—it is remarkably bright, clear and free from vegetable matter because of the bare and precipitous character of the hills which drain into the loch. It is uniform in color, temperature and quality, is absolutely free from pollution, and must remain so because the corporation have now bought up the building rights of the whole drainage area; it needs no filtration and is practically unaffected by the change of seasons.—Engineer Magazine.

A Prince's Dilemma.

A Prince's Dilemma.

The German emperor likes to study the characters of his group of small sons, and to that end has given them a room next to the one used for business purposes for himself. A certain great scientific man, having on one occasion an interview with the emperor, left his hat in the adjoining vestibule. There the little brothers discovered it; and the crown prince, explaining to the younger ones that "papa" sometimes sat on his opera hat and it came all right again, proceded to give a practical illustration of this statement, to the ruin of the beaver. The emperor's door suddenly opened and "papa" and the professor appeared. Like a manly little fellow the crown prince owned up, apologized to the laughing professor and went off to buy for the old gentleman a new hat with his small pocket change. his small pocket change.

tion of the numerous bottles cast adrift between Madeira and Cape San Roque, all of which ultimately found their way to the Windward Islands, the Bahamas or to the western shores of the Gulf of Mexico.

A Terrible Revenge.

Britain's Roman Roads.

Britain's Roman Roads.

Up to the year 1824 the modern roads of Great Britain were inferior to those the Romans built prior to the fifth century. The complete system included six main roads from London, with their branches, and a perfect network of cross roads, measuring all tld some 6000 miles, and connecting Edinburgh, Glasgow, Bath, Bristol, Newcastle, Dover and other points still unoccupied by thriving towns.

The Roman roads were narrow, but built to last for all time. The usual width was about fifteen feet, the depth three feet. The bottom was dug out and well rammed, a foundation of larger stones was laid in cement and layers of smaller stones tapered off toward the top, which was laid crowning in the middle to shed rain. Such cement as Romans used made these roads practically solid blocks of stone.

WINDMILL INSTEAD OF SAILS. Inventive Waterman Has Devised a New Motive Power For Yachts.

Windmills can be put to other uses than that of drawing water on stock raisers' farms throughout Illinois for the cattle to drink. This has been demonstrated by an ingenious boatman on the lake front, who has attached a mill to his toy yacht. The fans of the mill revolve fastest when the wind is high, and the craft is one of the swiftest between Michigan City and Waukegan. The owner of boat accepted a wager that he could not constructed a boat which would be able to make progress in the teeth of the wind. The bet was made early in the spring. The boatman began to think all day long. Last Sunday he announced that he had constructed a boat according to specifications and a boat according to specifications and was ready to try it in order that his point might be proved and his money

point might be proved and his money won.

The craft when in the water proved to be a skiff-like boat, three feet long. Directly under the bow was a deep keel. From the sternrose along vane, like those seen on country barns, to show the direction of the wind. Right above the bow there was a shaft with a windmill ten inches in diameter on the end. The shaft inclined aft and ran through what would have been the sternpost until it struck below the water line. A five-inch propeller was attached to this end of it. It was such an absurd-looking craft that everybody

water line. A five-inch propeller was attached to this end of it. It was such an absurd-looking craft that everybody laughed when its builder put the unwieldly thing into the water.

A strong west wind was blowing The queer boat quavored for a second as it struck the water, then slow! but steadily came to the wind. The md-mill caught the force of the gaie and began to revolve. Little by little the boat forged ahead The harder the wind blew the more rapidly it gained headway. The forward keel and the after weather vane kept it dead in the wind. The absurd little vessel stood out from the dock until its owner had to get in a rowboat to capture it. Everybody cheered and the wager was declared won. It is quite probable that the inventor will build a boat on the same principal big enough to carry him and a friend or two. The little model has created no end of talk along the lake shore.

"And you broke off the engagement?" said one young man. "Yes, not brutally, you know. But I managed it." "How?" "Told her what my salary is."

"Don't you dare kies me!" she cried, warningly. "Why, I wasn't thinking of such a thing," he said. "Well, I was," she replied, firmly.—Philadelphia North American.

"It is woman's lot to suffer in ellence!" I wonder what is the origin of that sentiment?" "Perhaps it's gorruption of the truth that a silent woman suffers a lot."—Detroit Journal.

Mrs. Gobbs—"I think it very strange that your friend Dobbs never married." Mr. Gobbs—"Oh, youndon't know Dobbs. He isn't half such a fool as he looks."—New York Weekly.

"A man," she said, "never knows when he is well off." "True," he replied, "and it's a mighty fortunate thing for women who don't care to be old maids that they don't."—Chicago Evening Post.

Mrs. Beenwed—"I could never understand how Mrs. Spadeface managed to marry such a handsome man," Mr. Beenwed—"I should think you would be able to figure it out from the said on the lake shore.

Making Love in Peru.

The social restrictions of ancient times are growing lax in Other Latin-American countries, because of contact with foreigners at home and abroad, although the young women are not yet allowed as out entire states and England. It is still a breach of decorum for a lady to receive a gentleman alone until after because of decorum for a lady to receive a gentleman alone until after hore mother or her father aske shore.

The social restrictions of ancient times are

An Interesting Samoan Ceremony.

The drinking of kava forms one of the most interesting ceremonies among the natives of Samoa. They are generally distinguished by the utmost formality, especially if a chief is present. 'In such an event the kava is brewed in the presence of the gathering by a comely Samoan girl, picturesquely garbed in bright-colored lava-lava, garlands of flowers and a headdress of brilliant feathers. The liquor is then emptied into a large bowl supported by three legs, from which it is dished up in cocoanut shells. The first to be served is the chief, who, however, haughtily rejects the beverage five times before deigning to partake of it. After the chief has been waited upon the liquor is passed around to the remainder of the company, according to their rank or years, and as each one is about to receive his portion he caps his hands, which act is equivalent to a toast."

A Gun to Suote rifteen's less.

The Royal gun factories at Woolwich, England, have, it is stated, just turned out agun with a range so much in excess of any previous ordnance that the Government range at Shoeburyness has been found insufficient for ascertaining its maximum range.

When fired for the first time, the shot went cut to see miles beyond the tarwent cut to sea miles beyond the tar-gets. Though the range of the new gets. Though the range of the new weapon has not been actually measured or calculated, artillerists estimate it at fifteen miles, or about ten miles more than that of the latest rifle small arms. St., Jamea's Gazette.

With their pipes, and with a pan Filled with soap-suds pure and strong, Little maid and little man Play with bubbles all day long.

THE WORLD'S COLDEST PLACE,
Russian Hamlet on Yana River Holds
That Distinction.

Merchandise imports into France during July decreased 122,000,000 francs from 1888, or \$24,400,000. Exports increased 88,700,000 francs, or \$17,740,000. Russian Hamlet on Yana River Holds
That Distinction.

From the Philadelphia Press: Verchoiausk is considered to be the coldest place in the world. It is a small collection of native log houses, plant-ed near to, but not on, the Yana river. The street, if so it may be called, extends on either side of a narrow sheet of water, a kind of creek formed by the autumn overflow of the Yana, and which in winter forms a frozen prom-enade or driving place for sleds. It is a dreary place enough. The summer lasts only four months, and during the other eight of the year it is bitterly cold, the thermometer sometimes indi-cating 86 degrees below zero, and it sel-dom goes above 50 degrees until April 30. Corn will not grow in this desolate region. Barley and oats have been sown, but have always succumbed to the early frosts. Of vegetables, there are only the radish and the turnip, are only the radish and the turnip, with, perhaps an occasional and very precarious crop of potatoes. Cabbages all run to leaf. The ground rarely thaws, even during the hot season, beyond twelve or eighteen inches deep, and in places much exposed to the heat never beyond a yard. Most of the dwellings are Rakut huts, built of firees against a square framework and covered thickly with mud to keep out the cold.

Margherita's Fondness for White

Margherita's Fondness for White. Queen Margherita is passionately fond of white, and wears it more than anything else. One day she asked the king if he thought she was growing too old to wear white dresses. The king replied that he would like to think the matter over. In the course of a week the queen received a note from her royal husband, saying that his answer would be found in the accompanying box. The box contained three beautiful white dresses.

Sir Jung Bahadur, the prime minis ter to the king of Nepaul, has a ha made of diamonds worth over \$2,500 000, and perched on top is a singl ruby of incalculable value.

BUCKINGHAM'S DYE Whiskers

It is said that the study of German is increasing in France, while the study of English is on the decline. In the Ecole des Sciences Politiques, in Paris, where diplomats are trained, many more study German than English. Many young Frenchmen are now being

Educate Your Bowels With Cascarett

Two Services a Year.

A clurch in which only two services are held during the course of any one year is a curiosity, yet such a one can be found in the middle of a large field near the village of Towton, England. It was originally erected as a memorial to Lord de Clifford, who fell in the battle of Towton in 1461. Services were instituted for the purpose of praying for the repose of his soul and those of his followers who fell in that historic battle. They might have been discontiumed long ago did not the view of Rysher, in whose parish the church is situated, receive the tithes from no less than one thousand and nine acres of land that are delicated to the little same that are delicated to the little same tharp.
