SCIENTIFIC AND INDUSTRIAL. There are two kinds of time—clock Tr mean time and apparent or sun time. Clock time is always right, while sun time varies overy day; the sun very seldom being on the meridian at twelve o'clock, solar day differing in length, owing to the sllipticity of the earth's orbit, etc.; but a mean solar day, as recorded by clock time, is twenty-four hours long. Disappointment in love of a pretty Wethersfield girl and the pique of a Narragansett Indian from Long Island were productive of a piece of Connec-ticut history which is sometimes put down as myth. The last man to prove the it is a provent died a for down

clock time, is twenty-four hours long. An addition to the known mineral treasures of the frosty north is made by the recent discovery of gold de-posits in Siberia, on the northwestern shore of the Sea of Okhotsk. The Russian Government has taken charge of the new goldfields, and is prepar-ing to lease them to parties who wish to try their fortune in developing the deposits. A fresh impulse is thus given to the opening up of Siberia.

given to the opening up of Sibera. Professor Dewar and other scienti-fic men have been testing the power of extreme cold on the microbes of typhoid fever, diphtheria, cholera and other diseases. The tomperature of liquid air, 190 degrees centigrade, had no effect on bacteria subjected to it for twenty hours. The light-giving bacteria lost their luminosity in the cold, but recovered iton being thawed out. The experiments will be con-tinued with liquid hydrogen.

tinued with liquid hydrogen. Distilling various metals, Kahl-baum, of Basle, has found that a number of them that usually rust quickly—like iron or cooper-are se purified that it becomes difficult to oxidize them. Iron is a beautiful silver-white medal that does not tar nish in the air. Tin proves to be the most difficult of the common metals to distill, as in a vacuum it does not begin tc pass over until a tempera-ture of 6000 degrees centigrade is reached.

down as myth. The last man to prove that it was not myth died a few days.
ago. He was Sol Webster, male descendant of the Wetherfield girl, last of some three hundred others who lived strange lives in the woods and hills around Barkhamsted.
The pretty white maiden, in the old colonial days, had fallen in love with a young man in Wethersfield, Conn., but her father forbade her marrying him. Thereupon she took a vow that she would wed the first man who offered himself. About that time the Narragansett Indian, a brave named Changham, had left his tribe, because of some injury to his reputation, and had come to live in Northern Connecticat. When he heard of the Wethersfield maiden, he hurried to her and offered his hand, which, according to her vow, she accepted. Together they went to what is now Barkhamsted, and became the progenitors of a people who during this centur. have been known as the "Lightnouse tribe."
It was in trying to learn how any people so far from the coast could get such a name that the romance was uncarthed. The couple established their home on what is called Bagged Mountain, on the upper waters of the Tanxis, and years afterward the lights from their hut served as a landmark for the stage coaches which passed that way. Hence, it is said, the name "Lighthouse tribe."
Changham and his wife brought up eight children. The pretty but wilful Molly lived to be 103 years old, dying in 1820, at which time she was known as Granny Changham. The halfbreed band gave the name of Satan's Kingdom to their resort, below New Bedford, was never laid at their door.
Eventually they began to degenerate through the marrying among themselves and from other causes, and in their latter days were "a band of bleached-out, basket-making, root gathering vagabonds." Their cabins because of more and more miserable, and at last the remnant of the tribe tribe." In a Brussels street traversed by an electric tram-car line, it has been noticed that the trees on one side of the way begin to lose their foliage early in August, the leaves turning brown and dropping off. But in October the same trees begin to bud again, and sometimes even blossom. October the same trees begin to bud again, and sometimes even blossom. Meanwhile the trees on the opposite side of the street are unaffected, los-ing their foliage late in the antumn and budding only in the spring. The cause of the anomaly is supposed to be leaking electric currents, which stimulate the growth of the trees af-fected.

Tested. The most recent and it may be added the most novel idea that has been advanced in the way of sub-marine navigation is a telescopic boat, whose displacement is changed by pushing in or out the after part. This is accomplished by means of an hy-draulic mechanism, and as the volume of the boat is increased or diminished it rises or sinks. The vessel is de-signed to be equipped for the dis-charge of Whitehead torpedoes, and possesses the striking feature of hav-ing separated from the hull and float-ing separated float hull and float-hull float and at last the remnant of the tribe dispersed. One hut alone remained near the vilgage of Riverton, a mile from the original Lighthouse. It was occupied by old Sol Webster and his wife, who were, as far as known, the sole sur-vivors of the family. Their poverty was extreme. The man said he was about eighty years old, but he looked much older. The woman is several years younger. Both were lineal de-scendants of Changham's daughters, but never were able to untangle their genealogie. The old settlement is situated in a wild spot of great natural beauty, with here and there a lilac bush marking the site of some former cabin.—New York Harald.

Raising Cattle on the Congo.

bearing the orew, in case of accident Raising Cattle on the Congo. One cause of the large mortality among while men, in the first ten years of pioneering on the Congo was their dependence upon the pre-served foods. In the past few years the percentage of mortality has de-creased one-half and the fact that fresh beef is now an available food death rate. The Company of Congo Products, organized in 1859, has given may be profitably conducted. It had been predicted that the experi-ment would fail because there are native cattle except in the extrema-south of the Congo basin. The company's herig nov number over 4000 head of cattle, all raised in the experimental stage of the work breading cattle were imported from number of countries and the bast re-sults have been obtained from the fine animals of the work of there are sults have been obtained from the fine animals of the bioasem ders print the company is increasing in the experimental stage of the work there and there a line to use teeth also had all the stations on the lower Congo in the company is increasing in Angola. HOUSEHOLD AFFAIRS ting Highly Polished Furniture Drigin of the "Lighthouse Tribe" Connecticut.

AN INDIAN ROMANCE.

Dusting Highly Polished Furniture. The more highly a surface is pol-ished the more liable it is to show the marks of anything that is passed over it. The best materials for dusteloths are soft, worn silk, worn French flat-nel, and a fine quality of cheese-cloth. A damp cloth will cloud žie polish of furniture and therefore zhould not be used, —Ladies' Home Journal.

Sweeping the Sick Room.

Sweeping the Sick Room. The best way to "sweep" a sick from is to rub the carpet with a damp loth. Dust must be avoided. The feather duster, which should find no place in the economy of any part of the house, is particularly objection-able in the sick room. Wipe the furniture and woodwork daily with a damp cloth, adding a teaspoonful of samped is to be wiped. In case of any infections disease the carpet should be removed; but if this is found im-possible, clean sheets should be tacked soften as necessary, and these sheets sprinkled each day with a solution of carboli water.

Afternoon Tea-Making. Afternoon Tea-Making. "A teaspoonful for each cup and one for the pot" is a rule as old as tea-drinking itself, regarding the quantity of tea to use; but it will be reduced as the number of cups is in-creased. However, if one has a larger number to serve than one's tea-pot will hold of cupfuls, the strength of the beverage may be increased in the making, to be afterward reduced with boiling water in the serving. Of course, fresh tea must be made for each relay of gnests when one is serv-ing for one's day "at home." The tea-pot-carthenware or china, but never tin-must be made hot by pour-ing in boiling water, letting it stand a dew moments, then draining and dry-ing. Then the tea may be put in, the boiling water poured on it, and acozy put over the pot for five minutes, when the tea will be ready to serve.--Woman's Home Companion.

Have a Garden.

A vegetable garden is a necessary feature of the home. A farm home without a well protected and managed A vegetable garden is a necessary feature of the home. A farm home without a well protected and managed garden may be a place to sleep and work and whereat to exist after a fashion, but there can be no living tike a lord of the acres without an abundance of vegetables and fruits in their season, or out of season. A fourth of an acre away out in the field is a slovenly and poverty strucken makeshift, which would defrand the chickens to feed the rabbits. The garden spot should be located lose to the house: ten yards from the kitchen door to the garden is a convenient distance, though it may be much less than that. The plat should be, for economical reasons, a parallelogram, the width being half the length, so that all the ploving may be done the long way; it requires less work, and there is less waste land where the horse turns. The garden should have a rabbit-proof and chicken-proof fence all around it. Falings should not be farther apart than two inches. Besides the entrance gate near the house thero should be, for a large garden, a large one whereat wagons loaded with ma-nure can be driven wil. Asit will not be much used, instead of a hinged gate, a movable panel will answer the purpose. This can easily be arranged when the fence is built, Half an acre, 210x105 feet, is large enough for a large enough for the average farm family. Haul in plenty of manure early will afford all the early pota-toes needed. One-fourth of an acre, or about 150x70 feet, will be found large enough for the average farm family. Haul in plenty of manure early in the season, plow it in and harrow smooth, and you are ready for business.

business.

Recipes. Recipes. Arrowroot Jelly-One cupful of boiling water, three heaping tea-spoonfuls of argar, one tablespoonful of lemon juice. Cook until thick, then pour into a mould to harden. Egg Succe-Make a cupful of white sauce and season to taste. Chop fine a hard boiled egg and stir it into the sauce and immediately afterwards, be-fore the sauce has returned to the boil, add a raw egg, beaten light. As soon as the sance begins to bubble at the side take it off and send it to table. Baked Coffice Custards-Scald three eups of mik, add four tablesponful of sugar and stir till dissolved. Then put in one cup of strong coffee, one teasponful of vanilla and six well-beaten eggs. Strain into buittered eups, stand them in a pan of warm water and bake till firm. Serve very cold. Creamed Baked Beans-Soak one

Spread of the English Language. Writing on the decline of the French language, M. Jean Finot points out that at the end of the last century French was the language spoken by the greatest number of civilized people. whereas now it stands fourth. English is spoken by 116,000,000, Russian by 55,000,000, German by \$0,000,000, and French by 58,000,000.
