GETTING A WIFE ON TICK.

rmer Telegraph Operator's Story of His Courtship in Chicago.

"I found my wife in an odd way," id an ex-telegraph operator, who is we a prominent officer of a western now a prominent officer of a western railroad. "It was my third year in the railroad business, but I had not forgotten the tick language, and I had a room in a hotel in Chicago which had a party wall with a boarding house adjoining. In the boarding house aily a mighty pretty girl who was attending a commercial college in the next block, where there was also a course of telegraphy taught, and I guessed by seeing the books and papers she carried that she was tak-ing that course. You see, I was interested from the first time I ever saw her on the street.

interested from the first time I ever saw her on the street. "She was a stranger In town, and, of course, there wasn't any chance for my being introduced to her, and as for filting, she showed no more signs of it than a sister of charity would, though I gave her every opportunity. I found out by a careful study of win-dows that her room in the boarding house was next to mine in the hotel, and that only made me feel worse—so gear and yet so far, you understand. I knew she would not be in the school much more than three months, and as half that time had gone by and I still had made no progress. I began to grow desperate, for I couldn't bear the thought of losing her. You know a romance like that makes a deal more impression on a fellow than the 'real thing.

real thing. "One Sunday afternoon I was in my room and she was in hers, and I could hear her driving a nail in the wall and a great thought came to me sud-denly. The next minute I had carght up one of my shoes and was pounding its heel on my wall, but I wasn't driving nails. Not much, I was making a tele-graph call. It wasn't anything in par-ticular, only, an 'attention' call, and graph call. It wasn't anything in par-ticular, only an 'attention' call, and after repeating it till I was about to give up in despair, it was answered from the other side. Then I tele-graphed, 'How do you do?' and that was answered, a little bit slow, per-haps, but answered all right, and the conversation continued. "She was not the most skilled op-

haps, but answered all right, and the conversation continued. "She was not the most skilled op-erator I had ever taken, but certain'y the most interesting one, and we talked through the wall till supper time. That evening I began again, but she was not at home, and when I got in at midnight I wisely forebore sending a 'good night' to her. Next morning I halled her with 'good morning' and got an answer, and then I asked her if I couldn't meet her after breakfast and walk to school with her, but she would not have it. You see, she was shy without a brict wall between us. I was three or four days pleading with her with my shoo heed on that wall before she agreed to meet me, and by that time I had tol1 her everything, and she just couldn't refuse to give me some kind of a show. After my first walk to school with her I was utterly gone, and though she staid on and was gradu-ated in telegraphy she never had a chance to practice what she learned. ated in telegraphy she never had a chance to practice what she learned, for before she got a job 1 had made her promise to marry me and give up telegraphy."—New York Sun.

Professor Cophagus's Theory, "My dear," said Prof. Cophagus at the table one day, "your pie is excel-lent. Give me another piece." "I am afraid, dear," said Mrs. Cop-hagus, timidly, "that we are eating too much pie. I think it would be a good thing if we were to make custards and stewed frint take the place of it." "I am aware," returned the profess-or lensing into an attitude adouted on

stewed friut take the place of it." "I am ware," returned the profess-or, lapsing into an attitude adopted on the lecture platform; "I am afraid that there is a popular prejudice against the American article of diet called ple. This might be overcome by calling it a tart. Let us investigate and see if it has any rational basis. Pie is but the fraction of a degree removed from shortcake, which is generally accepted as a good, wholesome New England dish, being composed of a crust of flour and butter with fresh berries between, and a little sugar to modify the acidity of the fruit. If there is any doubt about shortcake, however, it may be said that the foundation of shortcake is identical with what we call bizcuit (from the Latin, meaning twice cooked, or baked), biscuit differing from bread only in the fact of being raised with baking powder instead of yeast forment. And bread is the staff of hife. Please pass me another piece of pie."

But in spite of the professor's lengthy reasoning, his condition next morning might be briefly described as pi.—Leslie's Weekly.

The Birds of Zululand.

The Birds of Zululand. The brothers Woodward, two welk known Natal ornithologists, have re-cently issued a valuable work tow welk hadden and Zululand, and their account of bird life round St. Lucia Bay, in the Province of Zululand, and their encounteresting. Among the birds is extremely rare in South Africa; both the pied and the brown-hoads the standard winged night, steems, are very scarce, at St. Lucia; birds, it seems in every scarce, at St. Lucia; birds, it seems are very scarce, at St. Lucia; birds, it seems (noisy chat thrush), and the long failed cornorant is not uncommon the hedges of that large lagoon known as St. Lucia Bay.—Westminster Gazette.

PEARLS OF THOUGHT. A bad conscience burns. He who rests need not rust. Moral darkness is moral disea It is easy to slip up on an oily smile. The fruit that ripens earliest rots first.

Purity is the secret of pleasure in 10

No man is great whose aims are nall. The feet will go where the heart is

The feet will go where the heart is inclined. Tomorrow will obey you more read-ily than yesterday. A man is not dry the minute he is saved from drowning. The fuller blown the rose of pleas-ure the sconer its petals will full. It does not reliver the heart of mai-fice to use the tongue as an outlet. Innocence may be but ignorance, but virtue wins victory after strife. The man who coins his conscience into cash will 'never make a percent-age large enough to buy it back. No man has the right to say, "I have got to do right."—Ram's Horn. COLDENSH.

hey Generally Acquire Their Brilliant Coats a Year After Birth.

They Generally Acquire Their Brilliant Costa Year After Birth. Goldfish are so common nowadays that few persons ever stop to think where they come from or how they are aralsed. The pets require a careful and systematic raising that is scarce-by appreciated by those who expect to get them for a small price. The largest goldfish farm in the word, if it may be called such, is lo-cated in Shelly county, Indiana, about 30 miles from Indianapolis. Here the original goldfish men in the United States have their propagating insti-tution. There are two farms, several miles agant, both of which are re-quired to advance the various branch-es of the industry. In the northern art of the county is one farm, of eight or ten acres. The other is a few miles farther south and contains about 30 mode fish. On each of the farms is a large mot much larger than ten feet square. These ponds are all connected by lit-the changes, the water and fish out he least difficult. The breeding ponds, which are the mot important, are protected from the wind and cold by high embank-ments around the edges. This is all the protection that is necessary for the fish, even in the winter time. While the fish are very delicate and readily succumb to overhandling, they are much more hardy than is general-ter may persons suppose that when the spinds his hatched from the egg in its scales which make it so hear, tiful and valuable. This is not the

Many persons suppose that when the goldfish is hatched from the egg it has the peculiar, pretty markings on its scales which make it so beau-tiful and valuable. This is not the case. In its youth the fish is just the ame, apparently, as any ordinary fish. Even an expert could scarcely tell it from the little minnows which are to be found in any stream. It is of a whitish, slvery color, and shows not the least evidence of the beautiful hues which it will later assume. There are many instances in which tofor, but retain their silvery white complexion until they are several years old. Ordinarily the golden shades appear in less than a year. First, the fish begin to get dark, be coming almost black. From the dark color they begin to assume a reddish shade, and finally come out in all their glory, full-fledged goldfish. Often the fish, instead of acquiring a soild color and finally come out on all their glory full-fledged bodfish. Often the fish, instead of acquiring a soild tall, become spotted with big red blotches here and there at irregular intervals over the body. All the fish are fed exactly the same thing-tonsted bread two or three times a week. Nothing else is given them. The sun is the necessary agent, and the only one, to complete the scheme of nature, and even this sometimes dees pot do its work suc-cessfully.--Atlanta Constitution.

No waiters to be Tipped. No Waiters to be Tipped. No Waiters to be Tipped. An American slot machine res-taurant has been patented, and there meed be no more tips to restaurant waiters. Hot meals may be furnished in less than one minute by simply dropping a coin in the slot at a Chi-cago eating house. When a customer scats himself in a certain restaurant there he finds in a metaille frame in front of him a bill of fare, arranged in a new kind of slot machine, made of coins of all denomin-ntions, from five cents to \$1. The price of each article of food is stated on the bill of fare, and opposite each article is the appropriate slot, in which the customer inserts a coin of the proper denomination. In a minute a tray appears before the customer, and with his own hands he takes off the articles he has automatically or-dered.—Philadelphila Record.
