promptationtion.

BY MAIL.—The TRIBUNE is sent to out-oftown subscribers for \$1.50 a year, payable in
advance; pro rata terms for shorter periods.
The date when the subscription expires is on
the address label of each paper. Prompt renewals must be made at the expiration, otherwise the subscription will be discontinued.

Entered at the Postoflice at Freeland, Pa., s Second-Class Matter.

Make all money orders, checks, etc., payable to the Tribune Printing Company, Limited.

FREELAND, SEPTEMBER 16, 1901.

ROUND THE REGION.

There have been a number of dispatches to the effect that the president's patches to the effect that the president's assassin, Czolgosz, was a resident of various parts of the country. The latest is that a few years ago he was a resident of Durgea. They say that a man answering his description and giving his name as Nieman was head of the gang that committed depredations there and was at the head of the movement to blow up a priest's house. to blow up a priest's house.

Shickshinny and Huntington Valley Railway Company has been orvariey Railway Company has been organized at Shickshinny and a charter for the same obtained. The road is to run from Shickshinny to Harveyville and is serve miles long. R. P. Robinson is the president, R. M. Tubbs secretary and E. W. Garrison treasurer.

Justice of the Peace S. C. Motiska, of Duryea, who has caused the authorities more trouble in jumping his bail and dodging capias than any other man in the county, was again missing from court on Saturday when a case against him was called.

The Lehigh Valley Railroad Company has instituted proceedings to prevent the proposed new trolley line between Wilkesbarre and Hazleton from enter-ing either city, on the ground that the company is not obeying the provisions of its charter, as it will not carry freight

The officials of Mauch Chunk and those of Carbon county celebrated the opening of new troiley line which is to connect Mauch Chunk and Lehigh-ton, as far as the top of Flag Staff moun-

Devastating Power of Locusts.

A swarm of these insects stopped the As warm of these insects stopped the advance of a Russian army. They filled the air and blinded both officers and men, so that the former could give no orders, and even if they had done so the men could not have obeyed them. The horses would not face them, and they lay on the ground many inches thick. Every man and horse in the army was incrusted with the insects, and their clothing was literally eaten off the men as they stood helpless and blinded. The railways were useless, as the locates covered the rails, and the oil which exuded from their bodies when crushed prevented the driving wheels from "biting." After they had settled whole regiments were detached for the surpless of trampling them to death. Trenches were dug across their path and silled with burning coals, but the coowling swarms actually smothered the fare, so vast were their numbers. Even in a little island like Cyprus in one year was first of the entire revenue was speat in destroying the locusts, and especially their eggs. When these eggs are laid, they are inclosed in a horay envelope called a "pod," each pod containing 35 eggs. In seven menths 1,230 tons of pods were destroyed. New, a single ton of pods contains 60,000,000 eggs, and yet, in spite of this almost incredible destruction, the locusts are still a dreadful plague and shew little if any symptoms of dimbuttion in numbers.

COUNTERFEIT GOLD.

GILDING POWDERS ARE MADE OF COPPER AND SPELTER.

How the Material That Gives the Shining, Metallic Finish to Mirror and Picture Frames Is Produced. Gold Leaf Without Gold.

Gold Leaf Without Gold.

How many persons who see the shining gold in colored printing and on mirror and picture frames know that gold does not enter at all into the composition of the stuff that produces these golden effects?

The shining metallic effect is produced by a fine powder made from a mixture of bronze and spelter. This offers the cheapest and best means of giving the rich surface demanded in wall papers, printing, lithography, frescoing and in a vast range of manufactured articles of wood, paper and iron. The material used is so called Dutch metal, an alloy of copper and spelter. The relative proportions are varied to produce different colors. The larger the percentage of spelter the lighter or more yellowish will be the tint of the alloy.

The copper and spelter are sewated in

alloy

more yellowish will be the tint of the inloy.

The copper and spelter are smelted in graphite crucibles containing about 400 pounds of metal, which, when completely fused, is run off into molds, forming half round ingots two feet long by half an Inch in thickness. After cooling these are bound into bundles and sent to the rolling mill, where they are passed cold nine times through a double set of steel rolls under enormous pressure. This flattens them and draws them out into thin ribbons from 50 to 60 feet long and something more than one inch wide. Cold rolling under such extreme pressure makes the metal brittle, so it passes to the annealing furnace, which is heated by wood fire, as the sulphur in coal or coke would be injurious to the ribbons. Having been softened and rendered ductile by annealing they are cleansed

wood fire, as the sulphur in coal or coke would be injurious to the ribbons. Having been softened and rendered ductile by annealing, they are cleansed in an acid bath, cut into lengths of about three feet and collected in bundles of 40 or 50 strips each. They are laid between sheets of zinc and passed under hammers which beat the metal strips to the thinness of tissue paper. This requires six successive beatings, and great skill must be exercised to produce a uniform and unbroken foil. After the third beating the metal strips are taken from between the sheets of zinc, loosened from each other and cleansed by immersion in a bath of tartrate of potassium. The cleaning is repeated after the last beating, and the sheets are hung on lines to dry. In the beginning the rolled strips are a dull gray metallic color, at the fourth beating the yellowish color begins to show, and after the sixth they are clear and bright as gold.

The defective leaves are then thrown out and the perfect ones cut into small squares, which are laid together by hand in packets of several hundred each and inclosed within an envelope of sheet brass. The packets return to the annealing furnace, where they are softened by heating and slow cooling, and then go to the beaters, where they are reduced under flattening hammers to the thinness of real gold leaf, so thin that it can be blown away by the tength in grading clumping and rule.

breath.

The manufacture of bronze powder

The manufacture of bronze powder consists in grading, clipping, and pulverizing the various bronze foils to an even, impalpable powder and is an industry of comparatively recent date. It began as a means of using up and utilizing the imperfect leaves which came as waste from the beaters of gold, silver and bronze. These were cut by hand into fine clippings and then ground to powder in hand mills of simple construction. With the lapse of time and the spread of artistic industries the uses of bronze powder increased until the demand far outran the supply of waste, and the leaf metal is now made on a large scale.

The beating process flattens out a pound of copper and spelter alloy to an area of about 500 square feet, and in this condition the square sheets as they come from the brass envelopes are sheared into small fragments and rubed with olive oil through a steel sieve having ten meshes to the inch and then passed to the stamping and grinding machines, where they are pulverized by steam or water power to the bronze powder of commerce. The grinding occupies from one to four hours, according to the grade or quality of the powder to be produced, which is of four grades, from coarse to superfine. The superfluous oil is removed by heating under pressure, and the powder is then carried into centrifugal clarifiers, or grading machines, which, turning at a high speed, expel the powder through fine orlices in the form of ners, or grading machines, which, turning at a high speed, expel the powder through fine orifices in the form of dust, which settles on inclosed shelves, according to weight and fineness, the finer particles at the top, the coarser below, and in this way the powder is divided into its various grades.—New York Press. long at a high speed, expel the powder through fine orlices in the form of dust, which settles on inclosed shelves, according to weight and fineness, the finer particles at the top, the coarser below, and in this way the powder is divided into its various grades.—New York Press.

How Customs Vary.

She—In some parts of Australia when a man marries each of the bride's relatives strikes him with a stick by way of welcome into the family.

He—Yes, and in many parts of America when a man marries each of the bride's relatives strikes him with a loan by way of welcoming him into the family.—New York Times.

Traveling Experiences.

Mother—Sir, 1 hope my little boy doesn't worry you by his fretting and crying. He isn't well, or he wouldn't act so.

Mr. Man—Ob, no. All children act that way. I'm used to it—in fact, 1 haven't seen a well child for 20 years.—Chicago Herald.

A man should not be blamed for the wistakes he makes. He should be credited as he profits by them.—Atchison Globe.

CASTORIA

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of and has been made under his personal supervision since its infancy.

and has been made under his personal supervision since its infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children-Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is Pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhoza and Wind Colle. It relieves Teething Troubles, cures Constipation and Flatulency. It assimilates the Food, regulates the Stomach and Bowels, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

GENUINE CASTORIA ALWAYS

In Use For Over 30 Years.

Envalor for Babies.—It is the best and most effective laxative for children. BEST because it is and made entirely of harmless ingredients. BEST because it is non-tritiating, and never gripes or causes pain or tritiation. BEST because it is sure and never fatls. Laxikola for Young Girls on the threshold of vomanhood, has been found invaluable. When they become pale and languid, the eyes dull, aching head, feet and hands cold, appetite gone or abnormal, and their systems generally viru down, they need building up, and their olded needs cleansing. Give them Laxakola, its gentle bowel action to cleanse and its tonle properties to build the system, will show immediate and most beneficial results.

Laxakola for Mothers.—It is particularly valuable and useful to women, especially mothers, as it is a gentle and safe remedy to use during all conditions of health whenever their peculiar and delicate constitutions require a mild and efficient laxative and tonic, while to nursing mothers.

Laxakola Does It.

GOT THE POSITION.

Successfully Played on the Weakness of the Statesman,

The New York Herald tells how a diplomatic young lady who understood the weakness of politicians secured some years ago a place in the state

The day before the opening of the session a shy girl knocked at the door of the attorney general's office.
"Is the attorney general in?" she called thirdly.

asked timidly.

"Yes," said the clerk. "He will see you when he gets through with this long line of job hunters. Just have a

seat."

In the numerous chairs, on the office lounge and standing were 20 more waiting for a turn to press some claim

Oh, for a glimpse of a natural boy— A boy with freckled face, With forehead white 'neath tangled hair And limbs devoid of grace;

Whose feet toe in, while his elbows flare; Whose knees are patched all ways; Who turns as red as a lobster when You give him a word of praise;

A boy who's born with an appetite,
Who seeks the pantry shell
To eat his "piece" with resounding smack,
Who isn't gone on himself;

A "Robinson Crusoe" reading boy, Whose pockets bulge with trash, Who knows the use of rod and gun And where the brook trout splash.

It's true he'll sit in the easiest chair With his hat on his tousled head; That his hands and feet are everywhere, For youth must have room to spread,

But he doesn't dub his father "old man" Nor deny his mother's call Nor ridicule what his elders say Or think that he knows it all.
