

The Home of the Kindergarten. The Japanese have the most perfect kindergarten system in the world. In fact, they originated this method of instructing by entertainment instead of by punishment inflicted. Their play aparatus for such purpose is ela-borate, but all of it is adapted to the infant mind, which it is designed at once to amuse and to inform. The little ones of Japan even become some-what interested in mathematics by seeing and feeling what a pretty thing a cone, a sphere or a cylinder is when cut out of wood with a lathe. They make outlines of solid figures out of straw, with green peas to hold the joints together, and for the in-struction of the blind flat blocks are provided, with the Japanese charac-ters raised upon them.

ters raised upon them. Tea Output to be Reduced. At the annual meeting of the Cey-fon Tea Planters' Association it was resolved to take steps to effect a combination with the Indian planters to restrict the output, says a Colum-to correspondent. If the owners of 80 per cent of the tea acreage in In-dia and Ceylon join in the movement a reduction of 10 per cent will be made in the output, or an equivalent amount of green tea be manufactured. On no other basis, it was considered, can the present unprofitable condition of the tea trade be remedied, its rowth in Ceylon having been so rapid as to overtake the demand. It was estimated that this year the ship-ments to London would be 9,000,000 pounds less than those of last year.

DIFFICULTY WITH VERBS. oles That Children Have in Lear ing to Talk.

In the to Tark. It has been truthfully said that children learn more during their first six years of life than during the eight years spent in the ward schools. During this period the child shows remarkable precodity in learning the mother togue, and appears to learn two languages as easily as one. He will learn a foreign hanguage, if throw among foreigners, better during these first six years, than be can in a complete course in school. This is proved by the thousands of six-year olds in this city who speak good English, while their parents cannot speak English at all. The stremuous effort of these little ones to acquire a medium for the expression of their quaint idens, as well as their own desire to speak correctly, was shown the other day in a conversation between a little student and her mamma. The child had experienced much difficulty in mastering the various of the verb 'to be,' and had been corrected guith is during the first stages of progress. The child been careful in the future she would not answer questions not propely framed, thinking this plan would not answer questions not propely framed, thinking this plan would not answer questions not propely framed, thinking this plan would not answer questions not propely framed, thinking the plan. "Mamma, what is that going to are?" The other day the mother, who degine to a simulation of the error was sitting reoching a jacket for the baby, and Lucile stood near, wondering what hers. The other day the mother, and simulation and complex finally her curits. "Mamma, what is that going to are?" This the mother, thought a while and the child. Wondering what would not answer question of the child. Wondering what would not answer duestions not prove the courts without answering. The child, thinking she had not answering the child. Wondering what would not in selection of the child. Wondering what would not in the states on the other. After one heaves the mother heaved, and silence, and the little set stool the child. Wondering what would not in selection of the

"Mamma, what am that going to were?" Still no answer, and tears filled the blue eyes, and the red lips became pursed with perplexity. The eyes illed and ran over, and still the mother sat unmoved, with a mischievous smile unking in her eyes, waiting for further results, and determined to make up for all of this anguish by a bountiful supply of hugs and kisses. In one supreme effort, as though real-lzing that this was her last chance. Lucille burst into a mighty sob, and breaking the bonds of self-restraint with which she had bound herself, screamed out: "Mamma! What was that a'goin' to was?"-Milwaukee Sentinel.

"Mamma! What was that a'goin' to was?"—Milwaukee Sentinel. <u>A Moonil Garden.</u> The following bit of description is from "Confessions of a Wife." by "Mary Adams," a new novel dealing with marriage, in the Century. It is a young woman who is speaking, and Job is her dog: "For Job and I went out into the garden, and the world was as white as death, and as warm as life, and we plunged into the night as if we plunged into the night as if we plunged into a bath of warmth and whiteness—and I ran faster than Job. The yellow June IIIIes are out, and the purple fleurs-de-lis; the white climber is in blossom on the tree-house, and the other roses—oh, the roses! There was such a sent of everything in one—a Illy-honey-iris-rose perfume-that I felt drowned in it, as if I has a golden heart, and Job stayed be-low to paw a toad. The little white rose followed me all over the lattice, and describe; it is the kind of sweet-ness that makes you not want to talk about it. The electric light in the street was out, for this suburb, being of an economical turn of mind, never competes with the moon. There was moon enough—oh, there was enough. I hink, for the whole world! For, when that happened which did happen, it seemed to me as if the whole world we looking at me." DI American Basware the his.

It seemed to me as if the whole world were looking at me." Old American Bottles. In early American glassware the his-tory of our national art progress has been written. Choice and precious indeed are the crude blue-green and brown amber bottles made early in the nineteenth century—the portrait bottles bearing busis of Washington, Franklin, Lafayette, De Witt Clinton, Zachary Taylor, Kossuth and Jenny Lind. Local decorative subjects on many lines of idea were treated by the first American bottle-makers; and the most exquisite Venetian bottle cannot outrank in value, to a patriotic Am-erican collector, the primitive old flasks ornamented with Indians, Ma-sonic emblems, the eagle, stars, flags, log cabins, cannon and steamships, or such outdoor theme as the seasons, birds, fruits, trees, sheaves of wheat, the fishermar, deer, the gunner and his hounds, and the first blcycle. The earliest American railway, with a car drawn by a horse, is historically cele-bated on a glass flask, as well as the sold Pike's Peak plightin, with his staff and bundle.—The Century.

OIL WELLS OF JAPAN.

OIL WELLS OF JAPAN. Mater Methods of Drilling Have De-veloped Petroleum Industry. The Rentiers, of the British Consu-tor service in Japan, has submitted to the British Board of Trade a re-phas of late attracted much attention in that country. The only place in which the oil is produced in large quantities is in the province of Ech-gion on the west coast, the center of the industry being the town of Ar-nase, where the largest oil company in the country as been at work since 1888 with machinery imported from the country thas been at work since 1889 with machinery imported from the sea and carried above the spiled in with earth. In the north-rovered in 1889 and led to a fever of preven 600 and 700 speculative com-ness with small capital at work in Echigo and most of them failed. On there of 00 and 700 speculative com-parts of the province oil was dis-covered in 1889 and led to a fever of provide machinery. Hand boring the child at the town in the child in the sear and capital at work in the child at the town in the special of the oil to the refineries provide machinery. Hand boring the angle of the oil to the refineries provement in methods of winning thransport of the oil to the refineries pristions, and it has been proposed to Tokic, the capital, about two hundred production of the oil in Japan was 1830 allons were produced in Ech-tion. A Historic Punch Bowl.

230 gallons were produced in Echigo.
A Historic Punch Bowl.
The most revered piece of silver plate in the United States navy is the massive 18-pound silver punch bowl of the battleship Indiana, which bears the honorable scars of an historic battle. During that famous blockade and naval battle before Santiago de Cuba this rich piece of tableware was struck by a fragment of a mortar shell fired from the Socapa batter, and which burst in the ward room passage of the battleship. A frequend bit of the shell struck the bowl on one of the stoutest parts of the State of Indiana forms the central portion of a beautiful decoration. The scal is still there, but not as the art is designed it, for it now forms a part of a large, irregular indentation, which, in the estimation of the body, which, in the estimation of the house the value of the bowl a thousand times over.

Portugal Halts Civilization. Portugal Halts Civilization. The Portuguese sits at his cafe at the coast of his East African posses-sion and collects custom dues and sells stamped paper. For fear of the native he dares not march five miles beyond his seaport town, and the white man who ventures inland for the purposes of trade, or to culit-vate plantations, does so at his own risk, as he can be promised no pro-tection. The land back of Mozambi-que is divided into "holdings," and the rent of each holding is based upon the number of native huts it contains. The tax per hut is \$5.00 a year, and these holdings are leased to any Portuguese who promises to pay the combined taxes of all the huts. He also engages to cut new roads, to been to furnish a sufficient number of pollee to maintain order. All Newspacers Talk Weather.

police to maintain order. All Newspapers Talk Weather. There are over 2,000 daily papers in the United States, and each one of these prints in a conspicuous place the daily weather predictions. Dra it ever occur to you that there is no other information that receives pub-lication and attention by readers each day of the year in every daily paper of the country? There are 47 tri-weekly papers in the United States, 434 semi-weekly, and 14,734 weekly publications, the greater number of which publish the weekly weather respective States.

## Alps have

Guests Pass With Glaciers. Hotelkeepers in the Alps hav ew trouble and are complainin new trouble and are complaining at the loss of patrons, who are moving away from the glaciers. Yes, the at-tractive glaciers are actually passing from the landscape, and as they re-cede the hotels along their borders find that their registers are shorten-ing. These glaciers are not running away, by any means, but they are de-teriorating slowly, with a persistency that means their final annihilation. Hotels that a few years ago stood very near to a great river of slowly moving ice now find themselves a considerable distance away, and the attractiveness of the site is lessened. nplaining

Laid Up for Sixteen Weeks.

Jacobs Oil and Vogeler's Cur-ative Compound Cured Him.

St. Jacobs Oil and Vogeler's Curri-ative Compound Cured Him. "I have been a great sufferer from Rheu-matism for many years. I was laid up with Rheumatic Fever for nine weeks in 1594, and again for sixteen (16) weeks in 1896. I tried many medicines I saw advertised and others I was recommended; finally I was induced to take Vogeler's Curative Compound, which did me more good than all other medicines. In fact, I feel quite a different man since I have been taking the Compound. All my neighbors and friends are quite surprised to see me about and looking so well. I can only say that Vogeler's Carative Compound taken internally and by using St. Jacobs Oil outwardly acted like magic in my case. I had been taking medicines for years without obtaining benefit, but Vogeler's has practi-cally cured me. I have recommended Vog-eler's Curative Compound to a lot of my acquaintances, and they tell me that it has worked wonders. " Wishing yon every success in the sale of your Vogeler's Curative Compound and St. Jacobs Oil, I remain, gentlemen, " Your obedient servant, " GRONGE CLARKE, Gardener, " 32 Bechrort Road, Surrey." come friend, and to-day the market is sol Frog Farming. After laughing at the French peo-ple for their frog-eating procilvity, the United States is doing very well in that line, for the Food Commission estimates that we catch in this coun-try about 2,000,000 frogs. These frogs, which have been hopping for years more and more into gastronomic fa-vor, are sought for in all parts of the country, furnishing a paying indus-try, not only for the hunters of them in their natural haunts, but for scores of persons who have frog farms and raise them as they might raise chick-ens. To these persons the frogs mean an annual investment of \$100, 000, according to the report of the commission, and that means \$150,-000 to the consumers.
