ALMOST GOT A WHALE.

ALMOST GOT A WHALE.

T Amagansett, L. I., standing on the beach gazing out to sea Nat Edwards saw something that made him lose his attitude of indifference and rush wildly into the town, shouting in a voice to which years of seafaring life had given the capacity of a foghorn.

He made use of only three words. These he shouted again and again, and their nature was enough to cause a great commotion. He hadn't seen a hostile German fleet. Of far more importance to Amagansett was the message Nat hore. His three words were: "There she blows!"

The hullaballoo was great. The Flag was run up on the Liberty pole; bells were rung until it seemed as if a national convention of town criers had been called, and even the housewires ran into the street beating dishpans. Such a call to arms always stirs the blood of the Amagansetters.

"Biggest whale I ever saw!" gasped Nat.

Such a call to arms always stirs the blood of the Amagansetiers.

"Biggest whale I ever saw!" gasped Nat.

In twenty minutes every man, woman and child in town—save bedridden folk and infants in cradles—was down at the beach looking out to where the whale was spouting. The Amagansett fishermen always have boats ready for such an emergency, and in a few minutes three of these were manned, those who could not get aboard growling their disappointment as the luckier ones pulled away.

In the first boat to start were Captain Gabe Edwards and his brother Josh. Gabe was to handle the harpoon and Josh the lance. It was a great day for the Edwardses, for the second boat was in command of Bert of that family, while Captain Jesse, also an Edwards, was in the third. The boats sped to the southwest, where the whale, unconsclous of his danger, was moving along in the ways of peace.

The pursuers were close to the whale when he sounded. The men's spirits were depressed accordingly. A few minutes later, however, the whale arose, a point to the leeward of Captain Gabe's boat and almost within striking distance.

"Jump her, boys!" shouted Captain Josh.

The crew yanked at the cars with the second was the captain to the leeward of Captain Josh.

Josh.

Josh.

The crew yanked at the ears with increased energy. It seemed as if the whale didn't have a ghost of a show, but Captain Josh's son Everett got into the game with unfortunate results. He was in another boat. He and his crew were young and didn't know much about whale nature. So they shouted as they rowed, and that was enough for the whale. He sounded and remained below for ten minutes. When he came up he was a quarter of a mile away. Then he rushed off at high speed.

mile away. Then he rushed speed.

It was plain that all possibility of capture was ended, but the Edwardses hated to give up, and they rowed about for half the day. When they finally went ashore not a bell was rung.

"And he was 110 feet long," groaned

Nat.

A sharp lookout will be maintained along the beach to-morrow morning, in the hope that the whale will be kind enough to come back and be killed. On the strength of Nat's statement about the whale's length it is figured out that the capture would mean about \$2000 profit, and the Amagansetters want that money.

A MAN OF GRIT.

A MAN OF GRIT.

A man in southern Illinois had committed a cold-blooded murder. He was a member of a secret society of criminals and had been selected to put out of the way a traitor to the organization.

He found his victim scouring the country as a member of a sheriff's posse for an escaped criminal. The man asked his victim if he were so-and-so, received an affirmative answer, then and there shot him dead, fought his way through the posse and fied.

Two days later he was discovered hiding in a house in a neighboring small town. He was bored by a dozen builets, but he lived and was sentenced to be hanged.

Then political influence began working to save him from the gallows. A man now prominent in New York City was assigned to the task of trying to prevent his execution.

His attempts resulted in failure, and the day before the date set for the execution he called on the murderer and informed him that nothing more could be done.

"All right," said the man, "but they'll

and informed him that nothing more could be done.

"All right," said the man, "but they'll hang the wrong fellow to-morrow,"

To the politician's question whether he could do anything for him, the prisoner answered, "No."

"But what about a priest?" asked the politician.

"No." said the condemned man, adding a moment later: "But there's a Methodist preacher in town who's been kind to me, I'd like to tell him goodby."

Half an hour before the time set for

by."

Half an hour before the time set for the hanging the Sheriff went to the murderer's cell. He had been a model prisoner and the Sheriff wanted to show his appreciation in some way, so he asked:

"Well, Jim, is there anything I can do for you?"

"I'll thank you for a good cigar," was the reply.

Was the reply.

When the procession to the gallows started the prisoner was calmly smoking a cigar. Arrived under the noose the Sheriff spoke:

"I'm sorry to interrupt you, Jim, but the time to quit smoking."

A PLUCKY POLICEMAN.

Fifteen years ago there was a policeman in New York named Sheridan. He had a side partier as extraordinarily big as he was little.

The big man one day interfered with the doings of a notorious East Side gang known as Short Tails, and he was murdered in broad daylight on his post for his pains. When the captain of the precinct heard of the murder he declared that the Short Tails would be broken up and imprisoned. So he set about forming a platoon of police to take into the haunts of the gang. As he was about this duty the murdered man's chum, little Sheridan strolled in.

"They murdered him, did they?" he

police to take into the haunts of the gang. As he was about this duty the murdered man's chum, little Sheridan strolled in.

"They murdered him, did they?" he yelled. "And they've got bricks piled on the roofs of the tenements to throw at us when we march into their street, have they? And they're standing on the street corners looking for a fight, are they? Well, they'il get all they want—and I'll give it to 'em?"

Without club or firearm of any kind. Sheridan dashed out of the station house and ran into the heart of the Short Tails' stampling ground. Recognizing a group of their leaders on a street corner, he walked up to them, grabbed two of the more notoclous by their coat collars and, turning his back on the crowd, marched them toward the station house.

On the way there another Short Tail made a disparaging remark about the murdered policeman. Quick as a flash little Sheridan ordered his two prisoners to halt, knocked the third Short Tail down, dragged him over to where the other two were meekly standing, stood the third prisoner in line and without further ado, drove them into the station house.

Sheridan reached there just as the platoon was issued forth. He quickly handed his prisoners over to the doorman, joined the platoon, and in the general round-up that followed took a leading part and arrested a dozen Short Tails.

A FORESTER'S NERVE.

A FORESTER'S NERVE.

Fritz Werner was a German forester. One day a stag gored him frightfully in the abdomen.

As the infuriated animal pulled out his antiers, backed away and prepared for a second charge, the injured man propped himself on an elbow and fired just as the stag was closing in him. The animal fell dead and the man fainted away.

When he recovered consciousness be found that he could not attract attention by shouting. He realized that he was out of the beaten paths and that unless he dragged himself to a frequented place he would surely de. So he began dragging himself through the forest in the direction of his employer's house, three miles away.

He started on his journey at noon; at 3 o'clock the next morning the occupants of the house were aroused by the explosion of a gun nearby. Investigating they found the forester, in a dead faint and nearly dead from loss of blood, lying on the lawn. By his side was a smoking gun.

When the injured man got so that he could speak and tell his story, his master asked him:

"But why did you drag that heavy gun all the way?"

"I knew that I couldn't shout when I did reach an inhabitable place," was the reply, "so I brought it along to attract attention. I didn't think of it until I had crawled for half a mile, then I crawled back and got it."

until I had crawled for half a mile, then I crawled back and got it."

Marks of the Cateloguer.

A number of persons who receive books from the public libraries are puzzied at the mysterious marks on the title page. Some books have only one or two marks, others have a dozen. Occasionally it is a letter of the alphabet with two small figures close to it. Sometimes it is a letter underscored under the name of the book, or under the name of the book, or under the name of the subtry of the half which many readers can decipher, but are in entire ignorance as to its meaning. These are the marks of the chief cataloguer of the library, and are intended only as guideposts to her assistants. They convey information as to classification, other books in the library on the same subject, number of times the book is called for, and various items that are useful when the time comes to make out an annual report. Most chief cataloguers are women, and nearly every one has a system of her own. Cataloguing and indexing have grown to be a business in themselves, just as much as stenography and typewriting. It is mostly in the hands of women, and the pay is about the same. New York Times.

The Driest Spot on Earth.

hat about a priest?" asked clan. New York Times.

Id the condemned man, addment later: "But there's a preacher in town who's been percenter in town who's been hour before the time set foring the Sheriff went to the scell. He had been a model and the Sheriff wanted to appreciation in some way, so lim, is there anything I can ink you for a good cigar." Send the procession to the gallet the prisoner was calmiy a clgar. PROTECTING TREES.

It is estimated that the cost of pro-tecting trees to prevent disense, by the use of spraying mixtures, is less than one-fifth of a cent per tree, and the spraying may also increase the profit on fruit, by inducing better quality.

PRUNING VINES.

PRUNING VINES.

The winter is the time to prune grape vines, and it should not be dalayed, as they cannot be cut back with safety after spring opens. Vines put out last spring may be cut back to three eyes and older vines may have their new wood cut back to six or eight buds.

THE HEDGE PLANTS

THE HEIGH FLANTS.

The hedge plants along the roadette should receive an application of fertilizer in the spring and be also neatly trimmed. Hedges are frequently much neglected and die out, no attempts being made to prevent them from insect attacks or supply them with plant food as a compensation for the enormous growth made every season.

In storing fruit or vegetables in the cellar, the better plan is to have boxes or bins, and arrange them so that they better bear two or three inches above the bottom and the same distance from the wall. This gives a cold air space all around them, and will aid materially in keeping them at a more even temperature, while at the same time the risk of injury by frost is considerably lessened.

PRUNING TREES.

PRUNING TREES.

In pruning trees all stems half an inch or more in diameter should be covered with some water-proof substance, like grafting wax or shellac, of the consistency of cream. The bark and outer wood will thus be preserved, and the wound will in a season or so be covered with new bark. If this precaution be not taken the end of the branch will decay from exposure to wind, rain, heat and cold.

GROWING BLACKBERRIES.

It is now contended that it is a mistake to cut blackberry canne back too low, as they will give better crops it allowed more cane. They should be given better cultivation than is usually bestowed. One point to observe is that if the old canes have not been cut ou and burned there will be damage from borers. Blackberries will thrive on a kinds of soil, but to secure good crop fertilizer should be supplied early in the spring and the canes thined out if the rows where they are too close together.

SPRAYING APPLE TREES

SPRAYING APPLE TREES.
When to spray apple trees depends upon the purposes desired. Use Bordeaux mixture when the buds are swelling, and if canker worms are abundant spray also when the blossoms are about to open. After the blossoms fall spray again with Bordeaux mixture, also Farls green, repeating both applications a week or ten days later. In about ten days or two weeks another application may be made of Bordeaux mixture. These remedies or preventives are for scabs, bud moth, codling moth, tent caterpillar, curculio and canker worm.

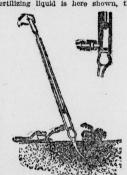

EVERGREEN HEDGES.

EVERGREEN HEDGES.

Evergreen hedges are ornamental and useful. The desire to secure a quick hedge induces close setting of the plants, which causes them to crowd in after years, as well as struggle for plant; food. Give plenty of room at first, allowing not less than a yard of space between plants, as they will fill the space as they advance in growth. The onemy of hedges is the basket worm, and the "baskets" should be picked off and burned. They are really cocoons at nd can be easily found. Spray the hedge with Paris green two or three times during the season.

'A portable irrigator especially adapted for treating the roots of a plant with fertilizing liquid is here shown, the

More About Wireless Telephony.

The principles at the base of wireless telephoning are well known. It is sufficient to recall that if the variations of current produced by a telephonic transmitter are suitably transmitted to a direct current feeding an arc lamp the words pronounced into the transmitter are heard as if they originated in the arc. This phenomenon is due to changes in the volume of the arc consequent upon changes of temperature caused by the variations of the density of the current. The changes of temperature of the arc also cause that the consequent of the arc also cause that the consequent in the arc also cause that the consequent of the arc also cause in the transmission of wireless telephonic messages. The fluctuations in the emission of the light are very rapid and cannot be seen by the eye. Mr. Ruhmer has lately sent such messages over a distance of more than four miles by day and by night. (In the day time the appartus must be screened from the direct rays of the sun, naturally). To direct the beam Mr. Ruhmer uses a 12-inch parabolic mirror. The arc lamp employed requires 4 to amperes of current for a distance of 1 to 2 kilometres, 8 to 10 amperes for 5 to 7 kilometres. The receiver consists of a parabolic mirror like the transmitter, in whose optical axis there is a cylimical selenium element in series with two telephones and a battery. The selenium varies in resistance under the action of the varying light. The luminous beam from the transmitter determines these variations of resistance corresponding to the microphonic currents of the transmitter. Similar variations are produced in the receiver and the spoken sounds are thus reproduced. The process here described was tried by Dr. Graham Bell in Washington, who was not successful over such long distance.

The Day of Influenza.

The Day of Influenza.

To sneeze or not to sneeze? That is the question. Then we sneeze and it changes to an exclamation. Everyone is doing it. Headache, bones ache, coughs, colds and the pestilence of grip is upon the face of the land. In Brooklyn Hills the worthy burgher sneezes an early curfew from his front porch, and the sound is mistaken for blasting in the tunnel. And when the shades of night draw down, he sneezes across the field to his neighbor; "Come over this evening; we're having a little snack before going to bed. Got some hot mustard and quinine, and somehing in a bottle." Then far into the night the rich, mellifuous sneeze chorus rises from that house. This is a hard blow to the warnings of the doctors who assert that grip is a serious matter, and not to be sneezed at.

Lawmakers Want Passes

Members of the Montana Legislature are protesting because a railroad in that State issued passes to them good only for 60 days, the term of the season, when each for the most part does little traveling.

Miss Menard cured after doctors failed to help her.

"Lydia E. Pinkham's Vegetable Compound cured me after doctors had failed, and I want other girls to know about it. During menstruation I suffered most intense pain low in the abdomen and in my limbs. At other times I had a heavy, depressed feeling which made my work seem twice as hard, and I grew pale and thin. The medione the doctor gave me did not do me one bit of good, and I was thoroughly discouraged. The doctor wanted me to stop work, but, of course, I could not do that. I finally began to take Lydia E. Pinkham's Vegetable Compound and felt better after taking the first bottle, and after taking six bottles I was entirely cured, and am mow in perfect health, and I am so grateful for it."—Miss Georgie Menars, 537 E. 152nd St., New York City.—\$5000 forfet If original of above letter proving penulanesse sannet be produced.

A Strange Bequest.

A Strange Bequest.

A Bruges philanthropist has just made an original will. He has left the town \$20,000, which is to be divided in the following manner: The sum is to be separated into seven parts, this being the number of parishes in Bruges. Each of these portions must be again subdivided into sums of \$200, for which the poor on the books of the charitable society are to draw lots. The amount is to be spent in setting the winners up in a small business or trade.

New Mill Device Tested.

A new device in the rolling of hoop iron was tested at Monessen, Pa., in the presence of officials of the American Steel Hoop Company. It is called a "repeater" and automatically handles the hot iron from one set of rolls to another on the principle of the continuous wire rod mill. By its use the labor of two men is dispensed with at each train of rolls.
