orms nearly or quite obtained from it when used heating purposes. In time agine, in utilizing the blast ases, will make pig-iron proore than doubly profitable.

Mrs. F. Wright, of Gelwein, lowa, is another one of the million weaten who have been restored to health by Lydia E. Pinkham's Vegetable Compound. A Young New York Lady Tells of a Wonderful Cure: —

A Young New York Lady Telis of a Wonderful Gwre:

"My trouble was with the oraciest I am tall, and the docter said I graw too fast for my strength. I suffered droadfully from indiammatics and doctored continually, but get so help. I suffered from terrible dragging seastions with the meat agonism beadants. No one knows want I endured. Often and the most agonism headants. No one knows want I endured. Often I was side to the stomach, and every little while I weald be too sick to ge to work, for these or four days: I work in a large store, and I suppose standing on my feet all day made me worse."

"At the suggestion of a friend of my interest all day made me worse."

"At the suggestion of a friend of my mother's I began to take I ydin E. Prinkhum's Vogotable Compound, and it is simply wonderful felt better after the first two or throadeses; it seemed as though a weight was taken off my shoulders; I centimized its use until now I can truthed its use until now I can truthed its was taken off my shoulders; I centimized its use until now I can truthed its was taken off my shoulders; I centimized its use until now I can truthed the second of t

Threads Used in Surgery.

Threads Used in Surgery.

Modern surgery employs dozens of different kinds of thread for sewing up cuts and wounds. Among them are kangaroo tendons, horsehafr, sikk and very fine sliver wire. The short, tough tendons taken from the kangaroo, which are used for sowing sowers wounds, are particularly valuable, and have saved many lives; they hold for about a month before they break away. Silk thread will hold for much longer, sometimes six months, while the six wire is practically indistructible. Thus a surgeon is able to select a thread that will last as long as the wound should take to heal, and will then disappeaar completely.

GRAIN SMUT PREVENTED.

In experiments at the Canadian central station for the prevention of grain smut, the best results were obtained by spraying the seed with a solution of a half-plut of formalin to five gallons of water. The cost of two treatments does not exceed one cent per bushel. It was found to be an almost perfect preventive of smut.

### ROOT CROPS.

ROOT CROPS.

The growing of root crops in this country is only secondary to grain and hay, but in Europe beets, carrots and turnips are prized more highly than any, other crops, and it is in England, where turnips are largely used, that we procure our best specimens of cattle, sheep and swine. Nearly all of the pure breeds of live stock in this country-came originally from England. An acre of land that will produce 50,000 pounds of timothy hay will produce 50,000 pounds of mangels, and the live stock will thrive better on mangels and hay than on hay or beets alone. The labor required to grow root crops is much less than formerly, and it will pay to bestow the labor if the live stock must give a profit.

SALT FOR FARM ANIMALS.

SALT FOR FARM ANIMALS.

So essential is the regular and frequent use of salt for the maintenance of health that animals, especially vegetable feeders, living in a state of nature, instinctively travel many miles to saline springs, the sea shore or to incrustations or beds of salt to get it. It has been noticed that the skin and hair of animals deprived of this necessity become rough and dry; that they do not take on flesh and thrive equally as well as do those having frequent supplies of salt. This has been shown to be true of horses, cattle, sheep and swine. The proper and safest dose to give horses is about one-half to one onnee, once or twice a week. Cattle will take twice that amount. Give sheep and swine one or two teaspoonties; the young not as much as adults.—Dr. M. D. Williams, in New England Homestead.

CONVENIENT HOG CHUTE.

This chute is eight-feet long and two feet and four inches wide. The posts at the low end are three feet long and at high end five feet and six inches long. Bottom is entirely surrounded with a belt of six-inch boards, while

DETAILS OF HOG CHUTE

top is confined as shown in illustration. Posts are of two by four stuff and ribs on side are one by four. Tall posts have holes bored every six inches from bottom up to one-half their height. These holes should be one-half linch. Holes a, No. 1, should be bored about four inches from bottom for cross bolt. Bottom plank is a foot long and two feet wide and should be two inches thick at one end; a, No. 2, straps of Iron pass around the end, just leaving loop enough to take cross bolt at leaving loop enough to take cross bolt at other end at any desired height. Wagons are not all the same in height, so the plank being adjustable will nicely meet the variations.—E. L. Keasey, in Orange Judd Farmer.

PREVENTING LOSS

PREVENTING LOSS.

It is a loss to keep an animal four years if it can be gotten into market when three years old, for the year's time saved means labor and food, as well as interest on capital invested. With the use of such beef producing treeds as the Shorthorns, Herefords, Anigus and Galloways, an average weight of 2000 pounds per animal has been obtained in four years, while three-year-olds have reached 1800 pounds, and two-year-olds 1400 pounds, the daily increase being over two pounds for the yearling up to two years old, and from one and one-half pounds toone and three-fourths pounds for older animals. The live weights only are given, but animals have dressed sixty-six and a half per cent, when in prime-condition. Experiments showing such results have been frequently made, and should convince all farmers that they can produce steers that will awelgh 1500 pounds, live weight, in three years, if they will use the proper breeds. Profit is made by using the best animals for the purpose desired.

Actual testy have shown that fowls.

using the best animals for the purpose desired.

Actual tests have shown that fowls which are kept together in large flocks are not profitable.

From ten to twenty hens in one flock have about the limit, and a larger number decreases the proportion of profit.

Whether you keep ten or a thousand hens they should be separated, and in that way the average production of eggs maintained.

There are many reasons why this is so, principal emong which is the feeding. It is well-nigh impossible to feed a larger number of hens at the same time without some of them getting too interest without some of them getting.

With a small flock it is an ead, matter to look after each individual fowl, and mote its condition from day to day. Any symptom of disease can be readily detected and a remedy promptly applied, and unprofitable flocks can by plied, and unprofitable flocks can by than method be made to pay.—Home

### HOW A BEAUTIFUL WOMAN ESCAPED SPRING CATARRH BY USE OF PE-RU-NA.

Nothing Robs One of Strength Like Spring Catarrh---Spring Fever is Spring Catarrh.

Have you got nerves? Well, you ought to be strong nerves. But they ought to be strong nerves, good nerves. Does your hand tremble? You are living too fast. Does your heart stutter at times? You had your nerves. The way to do this is to do your nerves ability and the state of Legion of Loyal Women, Hotel Salem, or they have too little laisure. The hospitals and insame asylums are filling up. The quiet, pastoral scenes of yore are becoming are. It's time that we quit this sort of business.

Rain to Manila.

"What is rain in Manila," says a man who has been there, "you think the first time you see the spectacle that the end of the world has come. Why, one day in September that I was there it rained 13 inches. You would think that would weary the elements for some time, but it did not. The next day it rained a foot, the day after that seven inches." "Where does the water go to?" asked a listener. "Right back where it came from," was the prompt reply. "After a downfall the sun will come out hoter than over and you can fairly see everything steam, and yet there are a great many people who wouldn't live anywhere else except in Manila." Experiments to determine the effi-cacy of various disinfectants made by the New York Board of Health shows steam to be the most valuable. It not only destroys quickly all disease germs, but has the power of penetrat-ing and disinfection not possessed by formaldehyde or sulphur fumes. No other agent is effective in the disin-fecting of clothing and bedding.

David Kaphokoaimohkewoonah, post-master at Koekea, Hawaii, has re-signed. His salary was only \$2 per year, which was not enough to pay for the ink used in signing his name to the official reports.

Nervous Prostration.

Thousands of cases might be quoted if which Peruna has been used to rescue people from the perdition of deranged nerves, and put me on the good, solid founds tion of health of the county Auditor of Eric County N. The County Auditor of Eric County N. The County N. Neff, in a reen letter written at Buffalo, New York, stated: "I was persuaded by a friend to try a bottle of your great never tonic, Peruna, and the results were so gratifying that I am more than pleased to recommend it."
