Motor Club Pays Biggest Claim In History of Body

Wyoming Valley Motor Club has paid the largest claim in its history, \$1,100 to the estate of David Wiant, aged 60, a farmer at Huntingdon Mills, who was killed by a Pennsylvania train at Lee's Crossing, near Mocaqua on November 3 of last year.

Mr. Wiant had been a member of the motor club for six years, the last two of which he carried insurance with it against accident. A well known farmer, he was on his way to market produce in Nanticoke, when his truck was struck and he was fatally injured, dying in the State Hospital in that city. Mr. Wiant is survived by his widow and four children, one of whom is a nurse in Philadelphia. This daughter is to have charge of the money, left to the children in equal shares, for the younger members of the family until each successively becomes of age.

Only 46 Agents To Enforce Law

For the enforcement of prohibition in administrative district comprising the Middle and Eastern Judicial districts of Pennsylvania, in which are located the populous cities of Philadelphia, Scranton, Wilkes-Barre, Allentown, Harrisburg, Lancaster, Williamsport and several others, there are available only forty-six prohibition agents.

It has developed, in the discussion of the prohibition issue, that the major portion of the forces of the prohibition unit are giving their attention to office routine, to investigation and to other administrative functions, leaving a relatively small number of agents to do the field work and to ferret out and run down bootleggers. As a rule, says Dr. Doran, enforcement agents are assigned to cities, leaving large sections of all the districts without agent supervision.

CHURCH NOTICES

Dallas Methodist Episcopal Church, Judson N. Bailey, M. A. minister. Sunday services, January 27, 1929.

10:30 a. m.—Morning worship, sermon by the minister, subject, "The Child in the Midst."

EAST DALLAS

Sunday, 9:15—Morning worship.

10:15—Church School.

home of gwil8SHRDLU UN UN NN

Wednesday, 8:00—Official Board.

Reproducing Drawings

Drawings can be reproduced by any of the three processes of printing. These three processes are relief printing, intaglio printing and planographic printing. In relief printing the design is raised above the blank parts which do not print. In intaglio printing the design is etched below the surface of the blank parts which do not print. In planographic printing the design to be printed and the blank parts are on a level surface.

Tricky Memory

The habit of forgetfulness causes a heap of unnecessary labor. I once knew a man back East who could seldom remember whether or not he had locked his store when he went home, and, of course, he had to trudge back and try the door, and half the time he could not remember whether he had gone back to try the door tonight or last night. Not much sense in permitting a memory to act so.—Portland Oregonian.

Just Like Grownups

Six, too, is that innocent age at which they cannot understand what makes even the simple mechanical toy run unless they take the toy apart.—St. Louis Post-Dispatch.

A "Used Car" Is Unused Transportation

A good automobile is built to stand years of use. It will provide many thousands of miles of satisfactory transportation.

But only occasionally are all its years and all its mileage used up by one owner. It is the custom to turn a car in after an average use of only two to three years—long before its life has been exhausted.

This custom brings into the market every year so-called "used cars" which represent unusual opportunities to buy unused transportation at low cost. Every year more and more people appreciate this fact. Today millions of families are driving cars of which they are the second or third or even fourth owners; and this year the volume of new car sales and trade-in transactions has created wider choices and greater values in used transportation than ever before.

Three out of five of the cars you see on the road have been purchased as "used cars." You cannot tell—nor do you ask yourself—whether the owner of a car bought it new, providing the car looks well and is running satisfactorily. The term "used car" is relative.

The cars which General Motors dealers have accepted in trade vary in name, body style, and price. Some have seen sturdy service; in others the potential mileage has scarcely been touched. All offer a wide field of opportunities—

To the family wanting transportation at lowest possible cost.

To the family wishing to own a car of a higher price class.

To the family needing a second or third car to meet the requirements of all its members.

Through its institutional advertising, which goes to millions of readers, General Motors invites the public to examine the unused transportation in the stores of its car dealers. Buyers may take advantage of the convenient GMAC Purchase Plan.

The Reliable Chevrolet Company, of Luzerne, are now offering some very good used cars at reasonable prices.

Mr. and Mrs. Lewis Le Grand entertained Bishop Richardson at dinner last evening.

Miss Helen Kirkendall, of New York City, has been visiting her parents, Mr. and Mrs. George Kirkendall.

Try an' Beat 'Em!

Challenge anybody equal, much less beat, the combination of tire values we offer you here.

First is the quality of GOODYEAR ALL-WEATHER TREAD balloon tires—the world's finest at any price.

Next is the low price at which we sell this superior tire quality. Know what that price is? Find out! It will surprise you.

Finally, our Service—the best in town—always on the job to see that your GOODYEARs deliver the long, economical mileage built into them by the factory.

Ask any of our customers!

Simplicity of cooling system is a feature of the new Ford

A COMPLETE water plant is a part of every automobile as it is a part of every modern city.

The purpose of this water plant is to keep the engine cooled to a temperature that will make it efficient in operation. If it were not for this, the cylinder walls would become overheated and the pistons refuse to operate.

The cooling system of the new Ford is particularly interesting because it is so simple and reliable.

When the radiator is full of water, the engine of the new Ford will not overheat under the hardest driving. Yet the water is so regulated that it will not impair engine operation by running too cold in winter.

The cooling surface of the Ford radiator is large, with four rows of tubes set in staggered position so that each receives the full benefit of the incoming air. The fan is of the airplane propeller type and draws air through the radiator at the rapid rate of 850 cubic feet per minute at 1000 revolutions per minute of the motor.

The hot water around the cylinder head is drawn to the radiator to be cooled by a centrifugal water pump of new design.

The entire cooling system of the new Ford is so simple in design and so carefully made that it requires very little attention.

The radiator should be kept full, of course, and drained once each month so that sediment will not collect and retard the free passage of water. In cold weather, a reliable anti-freeze solution should be added.

As owner and manager of this important water plant you should also see that the water pump and fan shaft are properly lubricated and the packing around the pump shaft kept in adjustment.

Hose connections may also need replacement after long service. For those little adjustments, it pays to call on the Ford dealer.

He works under close factory supervision and he has been specially trained and equipped to do a thorough, competent job at a fair price.
