Maple Trees As Sap Flow Starts

is employed in the leather business in Johnson City.

Instruction in all band instruments by experienced musician and former A. Swing No. 1921 Well P. As Spring Nears-1931 Will Be Average Year Or Better

> With the maple sugar season in full swing, reports of district fresters to the Pennsylvania Department of For-The Weekly ests and Waters, particularly from the northern part of the State, indicate that 1931 will be an average year or better, although the output of maple products is not expected to reach the peak production of 1930, which was the best in a decade.

More than half a million maple trees are ordinarily tapped in Pennsylvania, but even with a similar number of trees tapped in different years the product may vary greatly. Although the number of trees tapped was the same in 1929 and 1930, more than twice as much sugar and almost three times as much syrup was made in the latter year, it was pointed out.

. The variable yield in maple sap and products depends upon weather conditions, the foresters stated. The season may last anywhere from two to eight weeks, during February and March. High altitudes have the effect of generally delaying the advent of spring and prolonging the flow of the sap. In general, day temperatures rising above thirty degrees Fahrenheit, frosty nights and a slow change from winter to spring, are best. A region where the ground thaws quickly and the temperature varies little from day to night, is not suitable.

syrup, distinctly American products, is stock is idle. confined chiefly to the "North Woods," improve (New England States and Canada, and cannot be removed by rolling can be vania, the industry centers in the with good soil, and replacing the sod. west to the Lake States. In Pennsylnorth tier counties, where this type of Where this is not practical, fine loam forest predominates.

Somerset Is Leader Although the north tier counties, as surface then seeded. a group, lead in maple syrup and county of Somerset often tops the list. The unique position of Somerset county is attributed to its generally high altitude. with a correspondingly typical of vegetable seedlings can be controlnorthern climate and abundance of led by treating seed or soil with chemisugar maple trees, and second because cal solutions. Ask your county agent the "Somerset County Dutch," having a about this. special fondness for maple sugar and syrup, conserved the sugar bush when onverting the virgin forest into farm- 11 Years Constiland. Heavy demands of the acid wood industry upon the beech-birchmaple forests in the northern part of the State have depleted the stand of maple in that section.

The yield of individual maple trees quality. Trees under eight and ten inches are not usually tapped. From

The BEST Gray Hair Remedy is Home Wade

To half pint of water add one ounce bayrum, asmall box of Barbo Compound box of Barbo Compound and one-fourth ounce of glycerine. Any druggist can put this up or you can mix it at home at very little cost. Apply to the hair twice a week until the desired shade is obtained. It will gradually darken streaked, faded or gray hair and make it soft and glossy. Barbo will not color the scalp, is not sticky or greasy and does not rub off.

THE RIGHT FOOD FOR CHICKS

Chicatine has proved itself as the right food for chicks. Practical poultry keepers who have used Chicatine and made comparative tests with well known chick feeds, will now have no

Fed to chicks at the start and continued for five months, it brings them to maturity quicker. You get big, strong, healthy pullets that prove better layers; big, heavy broillers ready for market sooner and with greater profit.

Chicatine is clean, pure food without stimulant or medication. Because it has all the food elements in correct proportion, it develops chicks quickly and lessens mortality.

Chicatine increases profit for the poultry keeper.

Try it on your chicks.
