**YOUR DOG AN INTRICATE MECHANISM**

That dog of yours—out there watching over the baby or playing ball with the youngsters—do you realize what a marvelously complicated machine he is?

We are all inclined to marvel at the wonderful inventions evolved by man in his rise from savagery, yet when these are placed side by side with nature's inventions as worked out in living beings, they rather pale by the comparison, states the Chappel Kennel Foundation, Rockford, Illinois. The dog's skeleton is many times more intricate than the steel frame-work of, say, the 86-story Empire State building in New York City. His muscles, supplying the motive power for his body, are infinitely superior to the man-made gas engine. His heart, first devised by creatures in the sea countless ages ago, is a far more ingenious pump than man has yet been able to perfect. His brain responds to your commands by means of a much more complicated system than a central telephone exchange. No steam shovel of our civilization operates quite as effectively as the dog's "forearm." The wheel is probably the one invention in which man has surpassed nature, for the dog's legs are nothing but two spokes of a wheel, moving back and forth instead of around as they carry him forward.

The dog as we know him today is the result of centuries of environmental influences, states the Foundation. He is changing before our very eyes, adopting such characteristics as will enable him to adjust himself to civilized living and dropping those that hamper him from fitting into the present-day world.

Kindness kills most dogs. Out of a good heart folks feed their dogs too much or feed them the wrong kind of food. The chief element of a dog's diet must be meat. If you feed your dog a prepared well-balanced kennel ration with dog biscuits added twice a week for variety's sake, he will need nothing else except water. Be sure the wording "U. S. Inspected and Passed by Department of Agriculture" appears on the can label; it is your protection that what has gone into that can is as fresh and pure and clean as anything intended for your own use.
