Dressmaking and alterations, fur coats relined. Madeline Wagner Younkings, 174 Franklin Street, Shavertown 513

Television

Young men (18 to 28) wanted to learn how to install and service television sending and receiving apparatus, that is expected to find its way into this area in the near future. Must have at least a grammar school education or do not apply. Television is now being broadcasted from both world's fairs, and from 17 other licensed stations throughout the United States. We feel that it will only be a matter of time before it will be here. Manufacturers, dealers, and distributors will need thousands of men. We wish to contact ambitious young fellows who are willing to study and work hard to learn this brand new 20th century business. After several months of preparation it is possible to earn while you are learning. Those selected will be brought East for a short training period. If you wish consideration write immediately to Box 47, Dallas Post. In order to eliminate curiosity seekers ten cents must be enclosed to cover cost of mailing application form. This training plan sponsored by New York Technical Institute. Do not apply unless you honestly think that this kind of work would appeal to you. Mechanically or electrically inclined persons—those liking mechanical drawing or chemistry or wood work, or physics, or mathematics usually do well studying television. 164

Utility To Begin Expansion Program

(Continued from Page 1)

later, we will remedy them as they occur." In his cross-examination, Attorney Turner asked Mr. Craig if there is some way to improve service to the hard-hit Parrish Heights section immediately, and suggested that the parallel pipe be installed immediately. Mr. Craig expressed opinion that such a step, while feasible, would be impractical, while there is a possibility that the company's new Center Hill well does not come up to expectations, in which case the company will drill another well on Parrish Heights. In commenting upon the hearing, borough officials expressed themselves as pleased with the co-operative attitude of the company and endorsed the plan to postpone further action against the utility until it has had an opportunity to carry out its program. A committee which has been investigating the possibility of a municipally-owned plant indicated that it, too, would await results of the company's program before deciding upon any future course of action.

meek historian thrown in with a group of crooks.

The cast, directed by Miss Margaret Dunn, includes Charles Kern, Josephine Hummel, Elizabeth Sorber, Robert Payne, Ruth Rogers, Richard Williams, Geraldine Farver, Olga Brin, Otis Allen, Ruth Stevenson, Kenneth Davis and Leo Johnson.

Let us help you do your Spring Cleaning

We'll clean out your cellar in a jiffy... and haul that pile of ashes out of your back yard along with all the other rubbish that has collected during the winter months.

Just let us take those worries off your mind... and see how much easier it is to do your spring cleaning this year at little added cost.

POTASH-FED TOMATOES ARE MORE Profitable

TOMATOES are heavy feeders on potash. To grow a 10-ton crop requires approximately 100 lbs. of actual potash (K₂O) per acre. Larger yields require proportionately larger amounts. Potash, in addition to increasing yields, is the quality-producing element in your fertilizer. It keeps plants vigorous and productive, increases resistance to diseases, reduces stem-end cracking, improves color, and makes the fruit more firm and meaty. These qualities are very important profit considerations to both grower and canner.

Use enough high-potash, complete fertilizer on your crop to supply at least 100 lbs. of available potash per acre. Your county agent or experiment station will tell what analyses and rates of application are best suited to your soil. See your fertilizer dealer or manufacturer. You will be surprised how little extra it costs to apply enough potash for better yields and quality.
