

Poppy Day Sales Help Veterans

School Children Have 1000 To Sell Tomorrow

Memory of America's war dead in the first World War will be honored here on Saturday, May 24, when everyone will be asked to wear a memorial poppy in tribute to their service and sacrifice.

Plans for the observance of Poppy Day are being completed by the American Legion Auxiliary of Dad-dow-Isaacs Post, under the leadership of Mrs. Ralph C. Antrim, Poppy Day chairman.

The memorial flowers, made by disabled war veterans, will be offered on the streets throughout the day by the auxiliary women, and high school children from Dallas Borough, Dallas Township and Lehman High Schools.

One thousand poppies which the auxiliary will distribute here have been made by disabled veterans at veterans' hospitals. All Poppy Day workers will serve as volunteers and all of the money contributed to them for the flowers will go into the welfare funds of the Auxiliary's work for the disabled, their families and the families of the dead during the year ahead. The sum of three cents is paid to the disabled soldier who made the poppy and the remaining amount is divided between Veterans' Hospitals and Child Welfare work.

Eastern Tent Caterpillars Appear Again

Pests Increase As Natural Enemies Tend To Disappear

Eastern tent caterpillar once again makes its appearance in great numbers in Luzerne County, states J. D. Hutchison, county agent.

Four years ago the Eastern Tent Caterpillar became a very serious pest in this county and since that time dwindled down to almost nothing until this spring.

It is the habit of this particular insect to go in cycles of two to four years. This decrease in caterpillars is due to the natural parasites that feed upon them. When the parasites predominate the tent caterpillar is in the minority and if the parasites decrease the caterpillars

increase, thus we can expect cycles of intensity every four to five years. Between these spells of abundance this insect is kept in check by natural agencies, chiefly parasitic insects, bees and birds as well as unfavorable weather conditions.

The life history of this pest is that the moth or adult emerges late in June or early in July and deposits eggs in masses around suitable twigs. The egg mass is covered with a gummy material which hardens giving it a varnished ap-

pearance. The eggs hatch early the following spring just as the new fruit buds are showing green leaves. The young caterpillars feed on the opening buds but soon start spinning a web in the fork of a branch to form a nest. All the caterpillars from a single egg mass inhabit this nest. The caterpillars remain in the nest except when feeding and may be found there on days that are cloudy or at night. When mature, the caterpillar stops feeding and spins a cocoon in protected

places under rough bark and on buildings, etc., and it is from this cocoon that the adult moth appears late in June.

Control

Removal of egg clusters during the winter and burning them is a practical and efficient method of reducing the number of eggs that would hatch the following spring.

Removal of the pests by using either a cone-shaped brush at the end of a pole or a pole having 4 to 6 nails driven through the end

is a second method. Remove the nests when the caterpillars are in them and not after the mature caterpillars have left the nest. Nests that are removed should be burned.

The burning of the nests on the trees is not recommended on account of danger of injury to valuable shade trees for burning them will injure the bark.

Spraying with arsenate of lead at the rate of 1½ to 2 pounds of the poison in 50 gallons of water is effective. It is important to com-

mence spraying early since the young caterpillars feed on the leaves as they unfold from the buds.

So many requests have been received by the Luzerne County Agricultural Extension Association relative to the control of this pest, that it is felt advisable to urge all people who have nests on their premises to remove these nests by either of the above recommended methods. If every land owner, both in towns and rural areas would

remove the nests the population of this pest would be reduced considerably next year but if not done this year we can expect a heavier infestation in 1942.

Lake Township Alumni

Lake Township Alumni will meet at the high school Monday evening at 8 o'clock. Plans will be made for the banquet at Irem Country Club May 29.

ACME DEPENDABLE QUALITY MEATS

If you could consult the thousands upon thousands of folks who shop regularly in our Meat Departments, you'd have a real appreciation of the general satisfaction enjoyed by Acme Meat patrons.

Acme Super Markets

OPEN LATE Friday and Saturday Nights!

Tender Juicy ROUND, SIRLOIN PORTERHOUSE STEAKS
None Higher **29c**
Cut from our usual high quality, corn-fed beef.
