

# Potatoes, Fruit In Good Supply

## State Peach Crop Of Exceptional Size

Peaches, early summer apples, potatoes, broiler and fryer chickens will be in abundant supply from Pennsylvania farms during the month of August, the State Department of Agriculture reported this week.

Early peaches are now coming in limited supplies from Orchards in the Adams-Franklin-York and the Berks-Lehigh fruit belts and will increase in volume of marketings through the early part of this month, according to K. R. Slamp, Director, Bureau of Markets in the Department.

He called attention to the fact that the period from August 11 through August 20 will be observed as National Peach Week. Hot weather, coupled with adequate spraying on the part of growers have provided a crop of exceptional size and quality in Pennsylvania peaches this year.

Early peaches are well adapted to fresh eating, cooking, canning and freezing. By August 20, Elbertas and Hale varieties will come in good volume and continue into early September.

Summer apples will be coming in heavier volume as the month progresses, many of them adapted to making pies and sauce, he said.

Supplies of chicken broilers and fryers will rise to high levels during August with the month's marketings 1/6 more than in August a year ago, and about five per cent larger than marketings this June.

Milk production continues at high levels in Pennsylvania and heavy supplies of all dairy products, especially fluid milk and ice cream will be available during the month of August. Summer vegetables also will be in abundant production from home gardens and commercial truck operations, Slamp reported. Local markets will be well supplied with such summer vegetables as sweet corn, lettuce, tomatoes, cucumbers, peppers, carrots, beets and many more.

National Vegetable Week is being observed this week, through August 6.

"The sensible rule for government is that it should always be barely big enough to do the job assigned it. If it gets any bigger, it becomes dangerous."—Frank Pace, Jr., former Director of the Budget.

# Warning Issued On Forest Fires

## Summer Fires Are Hard To Extinguish

Once again the dry summer weather is giving grave concern to the foresters of Pennsylvania.

The woods are in a seriously dry condition and forest fires are a constant threat. Each day without rain adds to the seriousness of the situation.

According to Secretary of Forests and Waters, Maurice K. Goddard, this is the fourth consecutive summer in which a continued dry spell has brought about dangerous forest fire conditions. Ordinarily the summer rains and showers keep the forests sufficiently supplied with moisture to avoid any serious fire conditions. The woods remain fresh and green and danger of serious fire is minimized.

Without these rains, drying conditions create a highly inflammable condition in the woods. The surface litter becomes dry, the lower ground levels of decayed vegetable matter, which are normally moist, dry out to a peat-like formation. This causes summer fires to burn not only over the surface but several feet into the ground. It is this deep burning condition which makes summer fires so hard and expensive to handle and so difficult to extinguish thoroughly.

Secretary Goddard emphasized that, despite the extremely dry conditions, forest fires need not occur if everyone will cooperate and more than ever be conscious of the fact that in Pennsylvania practically every forest fire comes from the carelessness of people. He urged that everyone, tourists, vacationists, farmers, landowners, house wives and children cooperate during these dry spells to see that no forest fires get started.

Secretary Goddard is fully convinced that the solution is a simple one. We are not responsible for the weather or the rain but forest fires are the responsibility of everyone. If everyone would do his individual part we would have no forest fires.

### Timely Reminders from The Pennsylvania State University College of Agriculture

**Germs Thrive**—If you're going on a trip, don't warm the baby's formula and put it into a thermos. Germs thrive and multiply in warm milk. Keep it cold until baby's feeding time. Then warm the bottle by setting it in hot water, says Marguerite L. Duvall, Penn State extension family life specialist.

**Store Separately**—Store mixing bowls and measuring spoons separately so they can be selected without sorting, Doris L. Snook, Penn State extension home management specialist, suggests.

**Pins Rust**—Both brass and steel pins are used in home sewing. But steel pins may leave rust spots if left in material for a long time, while brass pins will not rust.

**Freeze Fruit**—When freezing peaches and other light-colored fruit, use 1/4 teaspoon powdered, pure ascorbic acid to 2 cups sugar to prevent browning, Helen L. Denning, Penn State extension nutritionist, suggests.

**Buy Thread**—Buy thread that looks darker on the spool than the material it's to be used on, because thread appears lighter in stitching.

**Keep Activity**—You can expect a
