**HALL'S PHARMACY Monthly News**

A message from Edward Hall, 'Your Pharmacist'

**DO YOU KNOW** that the average family is now spending a smaller percentage of their income for drugs than was necessary in past years. Despite the fact that some individual prescriptions containing the new antibiotics, etc., cost more, they actually help you to save money.

**THESE CURRENT GOVERNMENT STATISTICS** may surprise you. The American people now have a total income of about 327 billion dollars annually, of which they spend the following —

- 11.9 billion dollars on Recreation.
- 8.8 billion dollars on Alcoholic Beverages.
- 5.3 billion dollars on Tobacco.
- 2.8 billion dollars on Physicians' Care.
- 2.6 billion dollars on Hospital Care.

AND

1.6 billion dollars on Drugs.

**THERE ARE GOOD REASONS WHY** the costs of medical care is proportionately so low. We now have specific drugs that can be more often depended upon to accomplish a definite result. They not only save more lives, but help you to get well so much more quickly that your physician makes fewer calls and you spend less time in bed.

**MODERN PRESCRIPTIONS** save more lives and cost less per illness than ever before.
