a Dog's Life

TRAVELING WITH HUNTING DOGS
By Bob Bartos, Manager Friskies Pet Foods Research Center
How does your dog travel to the site of your hunting expedition? Ideally, right in the car with you, preferably in the back seat where he can't interfere with your driving; or in some type of dog carrier.
If you use a carrier or crate, be sure he gets plenty of fresh air and a chance to stretch his legs from time to time.
Unfortunately, the size of a crate needed to accommodate one of the large hunting breeds can be prohibitive, unless you're driving a station wagon. This often means that dog and crate are relegated to the trunk of the car which is not the place for a dog. The use of the trunk for this purpose is excusable only when you have a car full of hunters and no space for your four-footed companion. In such instances, take every available precaution.

First, the crate should be anchored in place to avoid slipping. Secondly, the trunk should be opened wide enough to assure plenty of fresh air, and fixed securely enough to insure it against closing. There are special locks available that hold the trunk safely open.
Another wise precaution is to have the exhaust system of your car checked before setting out on your hunting expedition. Even if the dog is getting sufficient air, a leak or malfunction of the exhaust system may make him ill and he'll be in no condition to hunt. Remember that each year many hunting dogs fall victim to trunk suffocation or carbon monoxide poisoning and never live to hunt.
