LEADING THE WAY TO A SOLUTION OF THE CONTAMINATION PROBLEM WITH A COMPACT, FACTORY-BUILT, PACKAGED —

SPENCER SEWAGE TREATMENT PLANT

BIOMECHANICAL — ANAEROBIC — FACULATIVE — AEROBIC

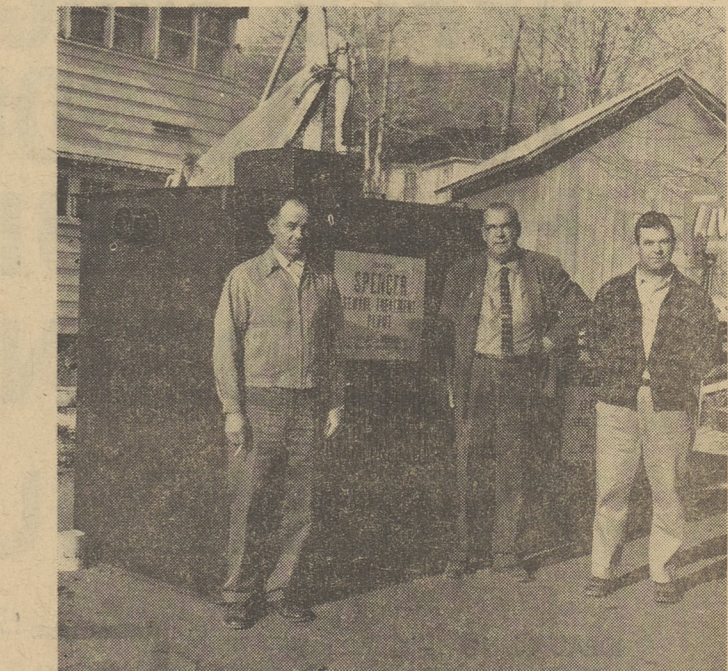

John Link—far sighted and practical in his approach to the sewage problem at Harveys Lake, has selected the most efficient sewage treatment available—a SPENCER SEWAGE TREATMENT PLANT!

Septic tanks have, and will continue to suffice for primary treatment of sewage where soil and geological conditions are such as to permit the use of this equipment.

Where soil and geological conditions are not conducive, it is a recognized fact that the indiscriminate installation and use of septic tanks is a hazard to health and damaging to natural resources.

Since the greater migration to suburban and rural areas, the need for factory made sewage treatment plants has expanded. Individual HOMES, DEVELOPMENTS or SUBDIVISIONS, COMMERCIAL, INSTITUTIONAL and INDUSTRIAL applications, not served by public sewer systems find SPENCER SEWAGE TREATMENT PLANTS a must! Costs are surprisingly low—not expensive to operate or maintain.

LINK'S TAVERN can be proud to be known as having recognized the imperative need for cooperation in the drive for a clean HARVEYS LAKE.
