It's amazing how accurate a watch can be, when it has a tuning fork.

ACCUTRON CALENDAR "AF" Waterproof, sweep second hand. Gilt applied roman numerals on a silver dial. Black alligator strap. \$175.00

ACCUTRON "424" Waterproof, sweep second hand, gilt radial brush dial, luminous dots and hands. Alligator lizard strap. \$135.00

The things that make a watch tick are the things that make a watch run wrong. Like its balance wheel. And mainspring and hairspring. So those things have been left out of the Accutron® timepiece. They've been replaced by a tiny tuning fork that hums. The tuning fork splits a second into more parts than the balance wheel movement ever dreamed of. 360 parts, to be exact. The best a ticking watch can do is 5 or 10. It's the tuning fork's uncanny precision that makes Accutron the most accurate timepiece you can wear. We're able to guarantee Accutron accuracy to within one minute a month. That's 2 seconds a day. And many owners say they're off only 1 second — or none at all. With accuracy like that, a watch has no business ticking when it could be humming.

ACCUTRON® by BULOVA it goes hm-m-m-m.

*When case, crown and crystal are intact. *We will adjust timekeeping to this tolerance, if necessary. Guarantee is for one full year.
