to the moon

Barring mishap or delay, the first man to step foot on the moon will do so this month. This man will be an American astronaut and, as is part of the tradition of exploration and discovery, he will implant on the moon's surface his country's flag. It is a custom as old as the ship in which Magellan sailed the seas and, we feel, as old-fashioned. For as proud as we are of our country's accomplishment in achieving this much coveted victory in the space race, we must realize that the world-or the solar system, or even the universe-is no longer our oyster. As members of an electronic age which has made possible the space flights, we must also understand that we have become members of what Marshall McLuhan calls the "global village." Nations can no longer claim impregnable defenses or impenetrable borders; in conquering time and space we can no longer be remote nor can we be out of toucch. For better or worse, we are a world without boundaries. How much more significant our moon landing would be if, perceiving the unique opportunity and responsibility which is ours, we would implant on that lunar landscape a symbol of the world community, a United Nations' flag.

smoke screen?

The constant cry from out of Washington to control advertisements of tobacco products raises many questions as to why such a concentrated attack is really being made at all. There is very little doubt left in the mind of tobacco users that To THE POST: tobacco can be harmful to their health, so why so much persistence in getting the message across? (Re: the Goffin's column in the The government and certain health societies are There used to be something spending millions of dollars to discourage the use wrong in the teaching of history, of tobacco. In getting this message to young people school with a complete indifand non-smokers, a service is being done. But to ference about history

own foreign policy.

all right. I was left after high-

graduation from formal schoolterest in history. I wanted to know, not when the general did so, and who told him to do it, and what was gained by this I wanted to know what the various peoples on the world, unknown to each other, were doing all at the same times in the past—what the Greeks were up to while the Polynesians were finding out ways to navigate uncharted oceans, and how far the human races were developed at the time when all the mammoths got themselves frozen stiff in Siberia. What sort of men conquered their parts of the world-did they efficiently kill off all their friends who might be thinking of taking over, as they presently What kinds of people are known to be honorable as we understand the term. My sister, Mrs. Hicks, tells me that on her recent trip to the Orient, she noted that the Chinese were honest people; the people of the Philippines were known to be thieves, experts since childhood. The word of a high-born Englishman was his bond, as that of a high-born Chinese. So was that of a high-born German. The trouble was, Mr. Hitler was assumed to be a highborn German, though in retrospect everybody should have known. What makes people tick, anyway? My present unanswered question is-what caused the fall of Rome? Was it that they hired mercenary armies to do their fighting for them? Was it the ineffective and perhaps corrupt bureaucracy that let their irrigation systems go to ruin, so that their once fertile fields could dry up and join the Sahara Desert? Why did our own people let our Huey Long begin to persuade a good deal of the South that emulation of Mr. Hitler would be good for the country? "It can't happen here" has a lot of dangerous holes in it as a theory Well, such things weren't taught in schools of my day; and I'm full of questions that haven't been answered, as far as my limited information goes. Mrs. Hicks, showed me your article

the nations of Asia, Africa and the air because of the supe-Latin America with most comiority of her air force. mitment.

One must also consider bal-With war a threat and conance of power politics-the flict a certainty between China relative military and civil value and Russia, the United States of the Soviets and Chinese. must weigh the relative strength Russia has far fewer people, of each nation in setting her but her people are far better soldiers and better industrial Last week we discussed the producers. Soviet technology is ideological strength of each also far advanced. Russian cenpower-here, China appears to ters of power are farther from have the strongest position in China than China's centers are the world. She supports revolufrom Russia. tionary change from poverty in

Russia has disadvantages too. Because she is technologically more advanced, she is more susceptibletodisruptionthrough bombing. A complex nation can fall apart more easily because everything is so interrelated. Bombing an agricultural nation like China-or, for that matter. North Vietnam-accomplishes little. However, one can assume Russia would control

Russia would strive to avoid nuclear confrontation because she fears her own complete destruction. Thus, her great superiority here would be neutralized.

China has advantage of revolutionary fervor and almost unlimited supplies of manpower for her army

It is difficult to estimate who would win in this war, but we would bet on superior technology. Even if no war were to occur, the guesses as to who would win must be weighed in foreign policy formation.

When the United States is added to the equation, it appears China is by far the lesser threat to this nation. China is without a navy worth consideration, without sophisticated nuclear weapons systems, without industrial depth. United States

SEEDS OF SLUMS

and Russian power seem greater than China's power for similar reasons.

Yet we face a greater danger Russia does-getting than bogged down in a land war in China-here China may well be undefeatable. We would be handicapped with longer supply lines and less manpower than

Thus, although Russia could probably beat China because China would have the same difficulty occupying Russian territory that Russia would have holding Chinese territory,

But, China does not have to attain anything more than a standoff versus the United States to enhance her prestige and lessen ours. We must, therefore, avoid war with China.

For the United States to defeat China in a long, drawn-out land war would mean turning this country into a garrison state comparable to ancient Sparta or the worst of Hitlerian Germany. If we opted for nuclear war, Russia might be drawn in meaning the end of

Russia.

neither the United States nor China could beat each other.

the world.

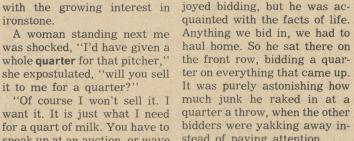

away from us once, just because we didn't happen to be in the right place at the right time. Henry Peterson had demonstrated it to the tune of "Bring-

in the Sheaves," and it was A small white ironstone clearly in good order. pitcher from the first Auction needed an organ like we needed clearly in good order. another hole in the head but there it was, and we fell in love with it. And then, while we were getting down the hill, hand in hand, Tom and I, to buy the

thing, somebody else bought it, the pitcher was mine. For a and the next thing on the block was a rubber plant.

Tom had a system. He enjoyed bidding, but he was acquainted with the facts of life. Anything we bid in, we had to the front row, bidding a quarter on everything that came up. It was purely astonishing how much junk he raked in at a quarter a throw, when the other bidders were yakking away in-

One thing was the chair on which he was seated, a solid oak job with a cane seat that only waving her hands and was showing its age. By the end shouting, she was leaping up of the evening, the seat had disintegrated, for Tom was not

smoker, for example, who donates money to the American Cancer Society, does so in hopes that crossed the Rhine, but why he the money will be used in research and not used in expensive and fancy advertising-a program that costly effort on his part. has created a lot of business for a lot of people, and all at the public's expense. Besides, does the public really want its officials to guard them from themselves? If so, isn't it about time that the government and all these various firms that are so concerned with our welfare look at other industries? We suspect that alochol has killed more people, wrecked more lives and homes, than tobacco. We feel that this ever increasing need of outside influences to protect us from ourselves could easily grow to the point where John Doe, day in and day out, will be bombarded with messages from Big Brother. Big Brother, meanwhile, will continue to do in the gangster hierarchy. grow fatter and richer.

citizen's panels

Citizens' panels to advise local communities and school districts in the preparation of programs are now an accepted method in many areas throughout the nation. By selecting dedicated men and women from within the community, a township, borough, or school district can accomplish much in creating and carrying through with practically any program desireable for the betterment of the community. Last year the Lackawanna Trail School District for example, which includes parts of Wyoming and Lackawanna Counties, completed a state mandated 10-year, long-range development program for the school district entirely by utilizing the skills of its area citizens. Many school districts paid anywhere from five to ten thousand dollars to private consultants to do this study. Some school districts set up citizens' panels to study recreation programs, make surveys, develop curriculums and other projects. Townships and boroughs could easily do the same. Not only does this give administrators more time to administer but it also gives citizens an opportunity to participate directly in creating a better community-without adding to the tax burden of themselves. Best of all is the fact that the people have a direct bearing on the direction they wish their community to take.

theory, it is to our advantage that Chinese strength is maintained-even increased.

Balance of power works like a see-saw. If of two people balanced on a see-saw, one suddenly gains five pounds, the balance is upset. In nations that might mean a bigger army or an ABM system. When the balance collapses, war may well result.

In this kind of balance, the bi-polar balance, equilibrium is difficult: the balance is inherently unstable. It is the system we have suffered under for a quarter century of cold war and constant threat of instant annihilation.

The multiple balance of power is much safer. If a number of people sit on a multiple-sided see-saw, a weight gain by one is much less unlikely to upset the others

The Right To Write

To THE POST:

The people of Kunkle and the Volunteer Fire Company of Kunkle wish to thank you for publicizing our first big auction June 21, 1969 for the purpose of raising funds to pay for a new fire engine.

Again, many thanks for mentioning it in your very fine newspaper

KUNKLE VOLUNTEER FIRE COMPANY Kunkle, Pa.

Auction after it had outlived its usefulness at the Pump House. Grandchildren have a way of small, requiring the finest of sprouting long legs and outgrowing cribs.

and it is probably going to be given away if I can ever bear and for a modest sum. to part with it. It has on its pillow the impress of many

small heads The rule of a crib or a cradle in every room has been relaxed of recent years and the highchair population has diminished almost to the vanishing point. A Library Auction some years ago fell heir to a tiger maple cradle with a hood, the kind you find in pictures of pioneer days, low to the floor, with sturdy rockers. A beautiful

young woman with the thickest braid of hair I have ever seen, bid it in A mahogany cradle, equally low to the floor but with a more sophisticated type of rocker, was elevated to the auction block the following year. It was very old mahogany, the wood rich and dark. It. too, had served as a bed for the newborn, its stout sides shielding the babies from drafts. It had patchwork quilt, now transferred to the one remaining cradle. Every tiny stitch had been lovingly made by hand, by a grandmother now long dead. It is ridiculous to wonder

what has happened to the cradles, but when a treasure passes into other hands, the mind follows it. There was a highchair of-

fered at one of the early Auctions, a beautiful chair, newly caned. This, I can vouch for, as I caned it myself, expecting to bid it in when it was sold. I was just half a second too late with my bid, and Harry Ohlman knocked it down to another buyer for a perfectly unbelievable sum, something like four dollars. There was four dollar's worth of caning in it, to say nothing of the lovely frame.

So there, again, somebody got a fantastic bargain. And it all goes to prove that

if you don't screech like mad when something you want is offered over the block, somebody is going to beat you to it. A small parlor organ got

was a sinner to cane, as the holes were close together, and cane. It took forever.

But it illustrates the point I've only one crib left, out of that if you keep your eyes open the number that I used to have, at the Library Auction, you'll be amazed at what you can buy, And tonight, the Auction starts, for the 23rd time.
